THIS PAGE INTENTIONALLY LEFT BLANK

FY 1996/1997 RDT&E, ARMY PROGRAM ELEMENT DESCRIPTIVE SUMMARIES

INTRODUCTION AND EXPLANATION OF CONTENTS

- elements and projects. Because of new and expanded formats, this document now consists of three volumes. A brief explanation of the Development, Test and Evaluation program. The Descriptive Summaries provide narrative information on all RDT&E, A program 1. General. This section has been prepared for the purpose of providing information concerning the U.S. Army Research, new formats is provided in paragraph 6 at the end of this section.
- 2. Relationship of FY 1996 Budget Submission to the FY 1995 Budget submitted to Congress. This paragraph provides a list of program elements restructured, transitioned, or established to provide specific program identification.
- A. Program Element Restructures. Explanation for these changes can be found in the narrative sections of the Program Element R-2 Exhibits.

| OLD PE/PROJECT | TITLE | NEW PE/PROJECT |

| 0603005/D221 | Non Ozone Depleting Substitutes Technology | 0602601/AH82 |
| 0603730/D560 | Tactical Surveillance System - Advance Development | 0603766/D907 |

Program Restructures (Continued)

| OLD PE/PROJECT | TITLE | NEW PE/PROJECT |
|-------------------|--|-------------------|
| 0604740/D662 | Tactical Surveillance System - Engineering Development | 0604766/D909 |
| 0604741/D126 | Air Defense Tactical Operations Center | 0604741/D146 |
| | Electro-Optic (EO) Test Equipment | 0604746/DL59 |
| | Integrated Family of Test Equipment | 0604746/DL59 |
| | Camouflage System Engineering Development | 0604804/DL42 |
| | Technical Test Instrumentation | 0604759/D984 |
| | Aircraft Certification | 0605606/D092 |
| 3 | Ozone Depleting Chemical Elimination | 0605854/M7PP |
| | Pollution Prevention | 0605854/M8PP |

Applicable portions of PE 0605856A, Environmental Compliance were restructured to new PEs for Environmental Conservation (PE 0605853A) and Pollution Prevention (PE 0605854A). Host Nation Compliance in PE 0605301A has been restructured to PE 0605856A and the new PEs, 0605853A and 0605854A. Multiple projects within PE 0601102A, Defense Research Sciences, were restructured into new projects in PE 0601104A which has federated approach involves the creation of a distributed, multi-center external component of ARL, leveraging industry and academic been renamed University/Industry Research Centers. These projects fund the federated Army Research Laboratory (ARL). The laboratories nationally recognized for technical competence in areas essential to the Army. Portions of PE 0605702A, 0605710A and 0605604A have been restructured into new projects in PE 0605604A to provide visibility for survivability/lethality projects as grouped by system categories.

.≥

Program Restructures (Continued)

Funding from twenty-four Army RDT&E Chemical/Biological Defense projects spread throughout the seven Budget Activities were transferred to the Joint Chemical Biological Defense appropriation under Office of the Secretary of Defense management based on Congressional direction. These transfers are shown in the applicable project R-2 Exhibits. B. Establishment of New Program Elements/Projects. There are no major system new starts. Minor new initiatives for FY 1996 are shown below with asterisks. The remaining programs listed are outyear initiatives beyond FY 1997.

- 4. Program Element number 0603639A is classified SECRET and will be provided upon request.
- 5. Classification. This document no longer contains any classified data.
- Services to prepare the RDT&E Descriptive Summaries in new formats which are described below. The change in formats increased 6. New Formats. The Department of Defense Financial Management Regulation 7000.14-R, dated May 1994 required the the overall size of the publication which is now being provided in three volumes.
- to show other related appropriation funding (Paragraph C) and schedule/milestone profiles (Paragraph D). Paragraphs C and D are not Frogram Change Summary for the total Program Element which shows FY 1994-FY 1997 Previous President's Budget submit funding and the current FY 1994-FY 1997 President's Budget Submit. Note that the FY95 Appropriated value represents the Congressionally Innovation Research/Small Business Technology Transfer tax has been applied. Additional R-2 Exhibits are provided for each project Element. Paragraph A provides descriptions and justifications for the Program Element and for each Project; Paragraph B provides a A. RDT&E Budget Item Justification Sheet (R-2) provides a resource summary table for all projects and the total Program approved funding less the amounts decremented by the Congressional undistributed reductions, but before the Small Business provided if there is no other related appropriation funding and if milestone schedules do not apply.
- Major Defense Acquisition Program, funding revisions of greater than plus or minus 10 percent since the FY 1995 President's Budget B. Program Element/Project Cost Breakdown (R-3) This Exhibit is prepared for each project in Budget Activities 4, 5 or 7 Acquisition and Planning Information. The criteria for requiring that this information be provided is at least one of the following: funded in FY 1995, FY 1996 or FY 1997. Those same projects which meet certain criteria will also show Paragraph B, Budget request, major milestone schedule change of more than six months, or is a new start.

A. Mission Description and Budget Item Justification: This program finances development of realistic mobile threat simulators. It provides the capabilities to create realistic simulated tactical environments during conduct of user testing of new weapon systems. Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budger Activity 6.

Simulators (PM ITTS), CROSSBOW-S, and the associated executive committee (EXCOM), which is administered by the OSD Director for Test, Systems Engineering and manuals, new equipment training, etc.). Threat simulator development is accomplished under the auspices of the Project Manager for Instrumentation, Targets, and Threat Office of the Secretary of Defense and General Accounting Office concerns that the Army conduct operational testing in a realistic threat environment. Initially created to simulators for Army test organizations. These battlefield simulators represent systems (e.g. missile systems; command, control and communications systems; electronic warfare systems; helicopters; etc.) that are used to portray a realistic threat environment during testing of U.S. weapon systems. Simulator development is responsive to Project D976 - Army Threat Simulator Program: Army Threat Simulator Program (ATSP) is a continuing program which finances development of realistic threat equipment is being acquired when appropriate in licu of development. Total package fielding will still be required (i.e., instrumentation, operations and maintenance, develop simulators of Soviet equipment, the changing world order has expanded the scope of this program to address rest of world (ROW) threats. Actual threat Evaluation. These affiliations eliminate any duplication within the U.S. Army or DoD.

FY 1994 Accomplishments: Continued Crelopment in the following mission areas:

- Air Defense Systems:
- Continued contingency concept planning for the XM15 Actual/Simulator (A/S) and initiated acquisition (1261)
- Basclined, instrumented, validated and fielded one limited XM43A/S Anti Aircraft Artillery (AAA) gun system (2540)
 - Completed requirement definition and specification design of XM17S radar system (100)
 - Advanced/Electronic Combat System:
- Initiated/completed a software simulator development of a high energy laser XMDEWS (1193)
 - Aviation Systems:
- Completed development of one XMHOKS helicopter (355)
 - Battle Management Network:
- Initiated development of XMTAS Command Control and Communication (C3S) (1000)
 - Initiated/completed Red Net command links of XMC3S (530)
- Completed procurement, instrumentation, validation and fielding of one XMTAR radar system (39)
 - Mission Support:
- Personnel costs and overhead (3540)

A. Mission Description and Budget Item Justification: This program funds aerial and ground hardware and software target development, maintenance and upgrade. Hardware targets are developed to support testing and training, are economical and expendable, are remotely controlled or stationary, and are often destroyed in use. Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

requirement documents. This tasking also includes the management of the target research, development, test and evaluation process; execution of the validation process to performance, multi-spectral aerial targets and Distributed Interactive Simulation (DIS) compatible virtual computer models that can fully stress the latest air defense and under test. The U.S. Army is the tri-service lead for rotary wing targets for testing. Aerial targets must have flight characteristics, signatures, speed, altitude and other performance factors which emulate the modern threat. This tasking includes the long-range planning to determine future target needs and development of coordinated air-to-air weapons. Modern weapons require test and evaluation using threat representative aerial targets to assess their effectiveness on the battlefield. This program encompasses a family of rotary and fixed wing, full-scale and subscale targets, tactical ballistic targets, ancillary devices and remote control systems to stress systems ensure that surrogate targets adequately represent the threat; development, and acquisition of surrogate and acquired targets; continuing maintenance, storage, and Project D238 - Aerial Targets: Provides for development, acquisition, operation, storage, update, and maintenance of realistic surrogate or acquired threat high development/enhancement/update engineering services of the developed and acquired threat targets to ensure availability for the test and evaluation customer.

FY 1994 Accomplishments:

- Helicopter Targets:
- Awarded development contract for HOKUM-X (1400)
- Terminated development of HAVOC-X. Program discontinued based on a completed study on the viability of using the same airframe for both HAVOC/HOKUM and the necessity for having two helicopter targets under simultaneous development. (2808)
 - Continued engineering development of the Universal Drone Control System (UDCS) (3300)
- Continued development, enhancement, maintenance, and storage for all Research Development Test and Evaluation (RDT&E) aerial targets, towed targets and augmentation devices; developed infrared towed target and conducted towed target simulation investigations for performance (1231)
- Continued participation in Air Force led joint development of Full Scale Fixed Wing Target (QF4); Participated in development of vector sorring to provide more accuracy and detail about missile performance relative to the threat aircraft with Navy as lead; and participated in and provided funding for Reliance (1122)

BUDGET ACTIVITY

6 - Management Support

0604258A Target Systems Development

PE NUMBER AND TITLE

Sight (NLOS), Comanche, and under Reliance, full scale helicopters for the Air Force and Navy, and technology programs which demand accurate threat representation in AERIAL TARGETS Test Programs Supported: Forward Area Air Defense (FAAD) Missile (Stinger), Patriot, Corps Surface to Air Missile (SAM), Non-Line-Oftheir aerial targets.

vehicle targets and developing Distributed Interactive Simulation (DIS) compatible virtual target computer models. The products are required to adequately stress weapons developed and acquired targets to ensure availability for the test and evaluation customer. Project also manages utilization of current assets and operates centralized spare Project D459 - Ground Targets: This program funds Army efforts to support testing of advanced weapon systems by developing surrogate and acquiring actual foreign process; execution of the validation process; acquiring foreign assets; continuing maintenance, storage, and development/enhancement/update engineering services of the service lead for providing ground targets for testing. This tasking includes the centralized management of the ground target research, development, test and evaluation systems. This tasking includes long range planning to determine future target needs and development of coordinated requirement documents. The US Army is the triparts program.

FY 1994 Accomplishments:

- Management of Ground Target Assets
- Established major foreign and surrogate asset management and inventory control program and integrated into the overall Department of Defense (DoD) Test and Evaluation process (496)
 - Implemented Primary Operating Centers (POC) concept, operation, storage, maintenance and repair of Ground Target Assets (2870)
 - Acquired additional foreign assets and spare parts to support the Ground Targets fleet (559)
 - Supported validation, accreditation and certification of ground targets (284)
- Began development of BMP3-S ground target surrogate (942)
- Conducted threat targets requirements study to support Department of Defense (DoD) ground targets needs under Reliance; developed Safety Plan (481)

FY 1995 Planned Program:

- Management of Ground Target Assets
- Manage and oversee Primary Operating Centers operation, storage, maintenance and repair of Ground Targets Assets (1551)
 - Acquire new foreign materiel assets, remote controls, and manage all ground target foreign asset surrogates (250)
 - Acquire spare parts to support the Ground Targets fleet (693)
- Continue validation, accreditation, and certification of ground targets (150)
 - Continue development of BMP3-S (1382)
- Continue to develop safety plans to meet DoD acquisition requirements and federal safety standards (150)
- Develop ground target subsystem signature enhancements, such as, Infrared (IR), Millimeter Wave (MMW), Radio Frequency (RF), etc. (430)
- Perform feasibility studies on utilization of Distributed Interactive Simulation (DIS) virtual computer models (420)
- Initiate concept exploration of a new ground target surrogate (300)

- Management of Ground Target Assets FY 1996 Planned Program:
- Manage and oversee Primary Operating Centers operation, storage, maintenance, and repair of Ground Target Assets (1200)
 - Acquire new foreign materiel assets, remote controls, and manage all ground targets foreign assets and surrogates (450)
 - Acquire spare parts to support the Ground Targets fleet (500)
- Continue validation, accreditation, and certification of ground targets (200)
- Continue to develop safety plans (150)
- Continue to develop ground target subsystem signature enhancements, such as, Infrared (IR), Millimeter Wave (MMW), Radio Frequency (RF), etc. (195)
 - Complete development and prototype of BMP3-S (1300)
- Initiate development of Distributed Interactive Simulation (DIS) compatible virtual target computer models (700)
- Initiate development of a new ground target surrogate (880)

FY 1997 Planned Program:

- Management of Ground Target Assets
- Manage and oversee Primary Operating Centers operation, storage, maintenance and repair of Ground Targets assets (1200)
 - Acquire new foreign materiel assets, remote controls and manage all ground targets foreign assets and surrogates (250)
 - Acquire spare parts to support the Ground Targets fleet (114)
- Continue validation, accreditation, and certification of ground targets (200)
- Initiate concept exploration of a Future Main Battle Tank (FMBT) ground target surrogate (463)
- Continue ground target subsystem enhancement (285)
- Continue Development of Distributed Interactive Simulation (DIS) compatible virtual target computer models (800)
- Continue development of a new ground target surrogate (1200)

System (CCAWS), Wide Area Mine (WAM), NLOS, Line-of-Sight Antitank (LOSAT), Ballistic Anti-Armor Submunition (BAT), Unmanned Aerial Vehicle; (UAV)-SR, operational testing and training in the future. Weapon systems for which these developments are required include: LONGBOW, Close Combat Anti-Armor Weapon GROUND TARGETS Test Programs Supported: Ground Targets efforts are investments which enable DoD customers to conduct appropriate developmental and Short Range Assault Weapon.

Element for oversight and management. The increase in Project D984 in FY 1996 is due to realigning projects from project D453, PE 0605602A. The FY 1996 - FY 2001 program funds only the minimum level required to develop the new testing capabilities required to evaluate advanced weapon system technologies and gain the A. Mission Description and Budget Item Justification: All Major Test and Evaluation (T&E) Investment programs have been consolidated into a single Program planned efficiencies through manpower reductions at TECOM and U.S. Army Operational Test and Evaluation Command (OPTEC).

Evaluation Command (OPTEC) test organizations. It also provides the capabilities to create simulated tactical environments during conduct of user testing of new weapon systems and to develop and upgrade other range instrumentation in support of testing and training. "Major instrumentation is defined as exceeding \$2 million per year or requir of for these systems. Army testing facilities are also surveyed to determine current testing capability shortfalls. This PE is appropriate to Budget Activity 6 because Bases (MRTFB): White Sands Missile Range (WSMR), NM; Yuma Proving Ground, (YPG), AZ; Combat Systems Test Activity (CSTA), MD; Dugway Proving Ground survey of project managers, Research, Development and Engineering Centers (RDECs), and Battle Laboratories developing future weapon systems and the test programs \$10 mi lion acquisition cost in Research, Development, Test and Evaluation (RDT&E) funding". Requirements for instrumentation are identified through a long range This program funds development and acquisition of major developmental test instrumentation for the TECOM test activities including Major Ranges and Test Facility (DPG), UT; and USAKA, Marshall Islands. Program also funds development and acquisition of major field instrumentation for U. S. Army Operational Test and it includes research and development effort directed toward support of installations or operations required for general research and development use.

Knox, KY, Fort Rucker, AL, Fort Benning, GA and the Operational Support Facility in Orlando, FL, which provide virtual combined arms battlefield with the warfighter-Project DCSS - Distributed Development Simulation Technology: This project supports the Core Distributed Interactive Simulations (DIS) Facilities (CDF) at Fort in-the-loop to evaluate weapon system concepts, tactics, doctrine and test plans.

FY 1994 Accomplishments:

Sustainment of Advanced Distributed Simulation Technology (ADST) support which enabled combat, materiel, and training developers and testers to perform experiments to test tactics, doctrine and weapon design. (2848) •

| RDT&E BUDGET ITEM JUSTIFICATION S | STIFICATION SHEET (R-2 Exhibit) DATE Fe | February 1995 |
|-----------------------------------|--|---------------|
| BUDGET ACTIVITY | PE NUMBER AND TITLE | |
| 6 - Management Support | 0604759A Major Test And Evaluation Investmen | ent |

1995 Planned Program:

- Continue sustainment of Advanced Distributed Simulation Technology support which enables combat, materiel, and training developers and testers to perform experiments to test tactics, doctrine and weapon design. (2761)
 - Small Business Innovative Research (SBIR)/Small Business Technology Transfer (STTR) (59)

FY 1996 Planned Program:

Continue sustainment of Advanced Distributed Simulation Technology support which enables combat, materiel, and training developers and testers to perform experiments to test tactics, doctrine and weapon design. (2773)

FY 1997 Planned Program:

Continue sustainment of Advanced Distributed Simulation Technology support which enables combat, materiel, and training developers and testers to perform experiments to test tactics, doctrine and weapon design. (2726)

US Air Force, National Acronantics and Space Administration (NASA), and other customers. Major Test and Evaluation (T&E) items are defined as costing \$2 million in Project D983 - Major Test and Evaluation (T&E) Investment - USAKA: This project funds the purchase of major Improvement and Modernization (I&M) equipment USAKA as a national test range. Approximately \$5 million of range improvements are required annually to maintain USAKA test range capability in support of current at the US Army Kwajalein Atoll (USAKA) in the Marshall Islands. USAKA is a national test range supporting Army, Ballistic Missile Defense Organization (BMDO), a single year or items costing \$10 million for total acquisition. Upgrades to radar, telemetry, optics, command/control and other equipment are required to maintain projected workload.

FY 1994 Accomplishments: There were no major instrumentation projects for USAKA funded in FY 1994.

FY 1995 Planned Program:

- replacement will also provide the opportunity to relocate the facility and consolidate the mission voice circuits, data circuits and fiber optic terminal equipment in the Technical Control Facility (TCF) Replacement: The TCF replacement is required due to the age and lack of maintainability of the current equipment. The same building for 24 hour monitoring. (2037)
 - SBIR/STTR (44)

FY 1996 Planned Program:

(KMR) to maintain and improve its ability to acquire accurate timing and spacial positioning data on test objects and thus enhance the dynamic metric and miss-Global Position System Translator Processory System Ground Translator Processor (GTP). The GTP development is required to allow Kwajalein Missile Range distance measurement capabilities. (2488)

FY 1997 Planned Program:

BUDGET ACTIVITY

0604759A Major Test And Evaluation Investment

PE NUMBER AND TITLE

- Advanced Research Project Agency-Lincoln C-Band Observables Radar (ALCOR) Computer/Receiver Upgrade. The ALCOR computer/receiver upgrade is required to improve performance, increase system reliability and reduce maintenance costs. (2000)
 - Complete Global Position System Translator Processory System GTP installation and integration. (489)

realignment of major instrumentation funding from PE 0605602A, D453, and three new instrumentation development efforts: Hardened Subminiature Telemetry Sensor System which is a new technology development for testing smart munitions and weapons; Frequency Surveillance System (FSS) which will augment manpower reduction and result in greater operations efficiency, and allow the monitoring of new frequency spectrums used by our modernized weapon systems; and Dynamic Infrared Scene systems at U. S. Army Test and Evaluation Command (TECOM) activities. Major instrumentation is defined by having one or more of the following attributes: joint service requirements, multiple command use, high visibility, large dollar value, produces a new capability or requires intensive management during acquisition. This Project D984 - Major Technical Test Instrumentation: This project develops and acquires major test instrumentation to perform developmental testing of weapon project funds major instrumentation that exceeds \$2 million per year or \$10 million acquisition cost in RDT&E funding. Funding increases in FY 1996 are due to Projector (DISP) which will be sued in testing new Infrared numitions and missiles by hardware in the loop simulation and virtual testing.

FY 1994 Accomplishments:

- Continued development of the Fiber Optic Network (FON) which is a high bandwidth data transmission system linking instrumentation with computers and users at CSTA. (330)
- Continued development of the Land Combat Instrumentation (L.31) which will support testing of emerging vehicle technologies, advanced armor concepts and munitions at CSTA. (1020)
- Prepared the WSMR Test Support Network (TSN) acquisition package and obtained a Milestone Decision Authority approval for milestone I/II to allow contract award in FY 1995. WSMR-TSN is a total range data transmission system which greatly improves test products while decreasing dramatically the operational cost. (800)
- Office (RAJPO) Eglin Air Force Base, acquiring and fielding has dware and software at all Army test organizations. GPS will provide common interoperable hardware Continued WSMR execution of the Army's portion of the Globa. Positioning System (GPS) full rate production contract at the GPS Range Application Joint Project and software for precision tracking of air and ground vehicles in the conduct of DOD testing. (750)
 - Continued capability for system level Army Tactical Command and Control System (ATCCS) technical test which instruments both operational and developmental tests of the Army's Command and Control Systems at Electronic Proving Ground (EPG). (293)
 - Completed Phase I of Frequency Surveillance System (FSS) which modernized three of six sites at WSMR (200)
- Provided in-house support (engineering analysis, concept formulation, salaries, travel, etc.) to on going projects and continued analysis of future instrumentation requirements. (2066)

FY 1995 Planned Program:

- Continue development of the FON project at CSTA. (426)
 - Continue development of the LCI project at CSTA. (6500)

Exhibit R-2

| 6 - Management Support | 0604759A Major Test And Evaluation Investment | |

- Award basic TSN contract for completion of phase I of the project at WSMR. WSMR TSN is a 3 phase 8 year developmental project with Initial Operating Capability
 - Continue WSMR execution of the Army's portion of the GPS full rate production contract, acquiring and fielding hardware and software at all Army test (IOC) in FY 1997 and Full Operating Capability (FOC) in FY 2003. (6924) organizations. (7448)
 - Provide in-house support (engineering analysis, concept formulation, salaries, travel, etc.) to on going projects and continued analysis of future instrumentation requirements. (2744)
- SBIR/STTR (516)

FY 1996 Planned Program:

- Continue development of the FON project at CSTA. (3362)
- Continue development of the LCI project at CSTA. (3950)
 - Continue Phase I of WSMR TSN contract support. (9670)
- Initiate Phase II of FSS modernization project, automating three to five sites capable of monitoring frequencies from 2 MHz to 100 Ghz at WSMR. (2360)
 - Continue WSMR execution of the Army's portion of the GPS production contract for all Army organizations at the GPS RAJPO, Eglin Air Force Base. (12381)
 - Continue from FY 1995 (PE 0605602A, D453) capability for system level Army Tactical Command and Control System (ATCCS) technical test project at WSMR/EPG. (210)
- support flight tests of smart munitions at Yuma Proving Grounds (YPG). HSTSS is a five year Army project with IOC in FY 2000 spring boarding off of OSD funded Initiate Hardened Subminiature Telerretry and Sensor System (HSTSS) project to develop transmitters, antennas, sensor and electronic packaging techniques to Test Technology Development Program. (22%)
 - Initiate a Dynamic Infrared Scene Projector (DIRSP) project to conduct performance testing of night vision sensors and Infrared (IR) imaging seekers, and provide the capability to fully simulate and synthesize present and future battlefields with a mix of real and simulated objects, at Redstone Technical Test Center (RTTC). DIRSP is a four year project with IOC in FY 1999. (500)
 - Provide in-house and government contract support (engineering analysis, concept formulation, salaries, travel, etc.) to on going projects and continued analysis of future instrumentation requirements. (3210)

FY 1997 Planned Program:

- Continue development of the FON project at CSTA. (1408)
- Continue development of the LCI project at CSTA. (4000)
- Continue Phase I of WSMR TSN project at WSMR. (10981)
- Continue Phase II of FSS modernization project at WSMR. (3560)
- Conclude the Army's portion of the GPS production contract for all Army test organizations. (6427)
 - Conclude capability for system level ATCCS technical test at EPG. (207)
 - Continue development of HSTSS at YPG. (2500)

| 6 - Management Support | tion Investment |

Continue implementation of the DIRSP project at RTTC. (1340)

Provide in-house and government contract support (engineering analysis, concept formulation, salaries, travel etc.) to on going projects and continued analysis of future instrumentation requirements. (3407)

Development Testing and Experimentation (FDTE). The Mobile Automated Instrumentation Suite (MAIS) will provide users the capability to measure the performance of units) reflects revised Initial Operational Capability (IOC) from FY 1996 to FY 1997. The FY 1996 increase was realigned from MAIS production funds to minimize risk and tactics modification, and, through the Advanced Research Projects Agency (ARPA) PDU format, part of the DIS, provide data with which to validate the future DOD transformation to link with Distributed Interactive Simulation (DIS). This data will provide objective assessment for new materiel acquisition, force structuring, doctrine warfighting models and simulations. The MAIS, a non-major system acquisition, achieved Milestone I/II in FY 90. Current program (one control center and 131 player during test and to complete project development for a production decision. One additional control center and 469 players are programmed in Other Procurement, Army hardware and personnel under realistic tactical conditions for large scale operations (up to 1830 players). The MAIS will instrument combat systems in the operational forces to provide Real Time Casualty Assessment (RTCA) and Time, Space, and Positioning Information (TSPI) data. MAIS will provide protocol data unit (PDU) Project D986 - Major User Test Instrumentation: This project finances the development of major field instrumentation for Operational Testing (OT) and Force appropriation.

FY 1994 Accomplishments:

- Conducted and completed MAIS formal qualification tests to verify allocation requirements were being met. Software test to be witnessed by the government. (2600)
- Initiated parts acquisition and started assembly of player unit engineering development prototypes (e.g. ground vehicle, rotary wing, fixed wing, dismounted troop, and crew served weapons). (3300)
- Conducted MAIS system software Independent Validation and Verification (IV&V). (1100)
- Completed equipment installation and integration in Central Instrumentation Facility/Test Control Center (CIF/TCC) shelters. (2900)
 - Completed software coding and integration testing including developing software for eight system software components. (12400)
 - Demonstrated functionality of key hardware/software MAIS components for defined exit criteria. (1196)

FY 1995 Planned Program:

- Initiate MAIS system integration and conduct subsystem level test. (7324)
 - · Hardware/software integration and test at subsystem level
- Conduct subsystem integration and test of player units/Command Control and Communication (C3) center
 - Conduct qualification tests
- Verify Time Division Multiple Access (TDMA) network for data latency, link margins and error rates
- Complete Formal Operational Verification Tests validating that the system meets security requirements
- Demonstrate critical functionality of the MAIS data communication network for defined milestone III exit criteria. (5500)

Conduct engineering systems test to validate the communication systems design

studies and analysis, which has operated at RAND since FY 1985. The Arroyo Center draws its researchers from RAND's staff of approximately 590 professionals trained RAND's Washington DC office. The RAND Arroyo Center provides for continuing analytical research across a broad spectrum of issues and concerns, which are grouped Army, and most of the Army's major commands. The Arroyo Center is provided guidance from the Army through the Arroyo Center Policy Committee (ACPC), which is staff work with analysts in the Army's internal study program, the Center is an independent organization that provides analysis for both the Army and the broader national maintain this level of effort, the Army supplemented FY94 programmed funds with customer reimbursable funds. In FY95, the Army plans to maintain this same level of co-chaired by the Vice Chief of Staff of the Army and the Assistant Secretary of the Army (Research, Development, and Acquisition). The ACPC reviews, monitors, and ensure, for the senior Army leadership, appropriate visibility and stability of the core research program. This will result in no increase in Arroyo Center research activity research agenda is primarily focused on mid/long-term concerns. Results and analytical findings directly impact senior leadership deliberations on major issues. Arroyo A. Mission Description and Budget Item Justification: This is a level-of-effort program based on a stable level of 104 Member of Technical Staff (MTS) per year. To effort (104 MTS) with supplemental funding. The FY 1996 program represents the Army's intent to fund the Arroyo Center entirely within a single program element to involvement on a continuing basis. RAND Arroyo provides the Army with a unique multidisciplinary capability for independent analysis. Although the Arroyo Center approves the annual Arroyo Center research plan as well as all individual research projects. Each project requires General Officer (or SES equivalent) sponsorship and in four major research areas: Strategy and Doctrine; Military Logistics; Manpower and Training; and Force Development and Technology. The RAND Arroyo Center or aggregate funding. This program funds the RAND Arroyo Center, the Department of the Army's Federally Funded Research and Development Center (FFRDC) for Project Reliance. This program supports decision making and resource allocation for general research and development and since it is not allocated to a specific R&D security community. Work in this program element is consistent with the Army Science and Technology Master Plan (ASTMP), the Army Modernization Plan, and in a broad range of disciplines. About 90 percent of RAND's staff are located at the corporate headquarters in Santa Monica, California; the remainder are based at Center research is sponsored by the Secretary of the Army, the Assistant Secretaries, the Chief of Staff and Vice Chief of the Army, the Deputy Chiefs of Staff of the mission, it is appropriately funded in Budget Activity 6.

FY 1994 Accomplishments:

- collective operations with international regional organizations, assessing future intra-state conflict implications for possible U.S. intervention and termination decisions, Research addressing external factors affecting the future Army included determining what practical requirements would be involved in preparing for and performing examining the emerging infrastructure of the Russian military R&D sector, and examining nonlethal technologies and military operations other than war. (2203)
 - post-mobilization unit training, examining potential new structures for the total Army school system, analyzing and modeling deployment and intratheater logistics activities to assess the effects of logistics shortfalls on combat capabilities, and analyzing how future requirements spanning the spectrum from major regional Research on Army restructuring and methods for becoming more efficient included assessing feasible mechanisms for reserve component peacetime and contingencies to military operations other than war might be met by alternative Active-Reserve structures.

| 6 - Management Support | 3605103A Rand Arroyo Center | D732 |

- modifying the term-of-enlistment mix within the Active Army and the likely effects on both the active and reserve personnel systems, and assessing the changes likely Research on adapting Army institutions to a changing military and social context provided the Army with a better understanding of possible improvements in the Reserve Component (RC) and Active Component personnel systems and identifying policies that can ameliorate RC personnel problems, examining options for to occur in the Army's organizational culture and the implications of these changes for major areas of Army policy. (1553)
- Training Center force-on-force exercises, assessing the economic viability of the commercial market of a dual-use technology program for a cargo/commuter rotorcraft, Research on using technology to better serve the Army's missions included identifying the frequency and intensity of command and control problems during National needs of users and decision makers, integrating simulation models to produce an analytical tool for evaluating anti-armor systems in a combined force, and analyzing identifying preferred approaches to reducing/preventing fratricide, determining ways to make Army logistics information more reliable and timely to better meet the technical and policy issues on strategic and theater missile defense development and deployment. (5802)
- Research on interacting with the Army's agents of change included providing support for Battle Labs and, through exercise participation and analysis, evaluating Louisiana Maneuvers. (1341)

FY 1995 Planned Program:

- nuclear deterrence doctrines and employment strategies may be utilized, what kind of circumstances could result in nuclear use, and what these fin ings imply for U.S. examining ways in which current U.S. Army strengths might be used to shape regional peacetime environments to prevent future conflicts, identifying East Asian Research addressing the nature of power in the future, to include examining the prospective relationship between emerging regional "great powers" and the West, nations most likely to make substantial advances in their qualitative military capability during the next ten years and examining the resulting implications for the Army and, by focusing on the role of nuclear weapons in Indian and Pakistani grand strategies, examine what kinds of weapons may be developed, what kinds of strategic and military policy. (2200)
 - Research addressing what Army forces should be and how they should operate, including analyzing how broader range missions—spanning the spectrum from major Staging and Onward Movement Integration requirements in force-projection operations, and determining how to maximize interagency coordination and cooperation developing a framework for understanding how they fit into the Force XXI design process, assisting the Army develop doctrine and force structure for its Reception, program and assisting in related efforts to develop new structures to support future Reserve Component training, examining the available mix of an ubtic tools and regional contingencies to operations other than war—might be met by alternative Active-Reserve structures, evaluating the ongoing Bold Shift reserve training in the conduct of operations other than war outside the continental United States. (3933)
- that is consistent with the new demands and constraints it now faces, examining system technologies that can significantly enhance the force-projection capabilities of Research addressing new systems and technologies the Army should acquire, including assisting the Army in devising a technology development investment strategy Simulation (DIS), and clarifying the link between organizational incentives and the implementation of ongoing efforts to streamline the Army procurement process, early-entry forces against current and future threats, developing approaches to experimental design for the most common analytic uses of Distributed Interactive and encourage innovation and risktaking on the part of acquisition managers. (1870)
- personnel into the Active Component while encouraging them to join the Reserve Component after their active term, analyzing historical and current data on Reserve Officer Training Corps (ROTC) participants and estimating potential effects of program changes on the characteristics of future ROTC cohorts, and determining the Research addressing how the Army should be manned, including exploring areas related to future recruiting success, analyzing methods to attract high-quality extent and sources of current personnel turbulence and recommending policies to minimize the resulting readiness impediments. MAC2 Host Nation Compilance

activity of the Major Range and Test Facility Base as constituted by DoD Directive 3200.11. Its function is to support test and evaluation of major Array and DoD missile have been realigned to the newly established/restructured RDTE, A Environmental Compliance program elements. Funding is in support of site installations or operations (ICBM) development and operational tests, U.S. Space Surveillance Network, and NASA Space Transportation System (Shuttle) and orbital debris experiments. USAKA (RADOT) long range metric video tracking systems, high density data recorders for high data-rate telemetry, and sonobuoy missile impact location system data analysis and reduction hardware and software. USAKA is contractor operated and is therefore totally dependent upon its associated support contractors. Program also provides funds for the contractors to accomplish installation operation and maintenance. In accordance with OSD guidance, Host Nation Compliance resources (Project MAC2) A. Mission Description and Budget Item Justification: U.S. Army Kwajalein Atoll (USAKA) is a remote (located in the republic of the Marshall slands), secure supported include Army missile defense, Ballistic Missile Defense Organization (BMDO) demonstration, alidation tests, Air Force Intercontinental Bulistic Missile Kwajalein Missile Range which consists of a number of sophisticated, one-of-a-kind, radar, optical, telemetry, command/control/communications, and data reduction supports the Missile Defense Act of 1991 to put in place a Ground Based Defense System by 2006 or earliest date possible. The technical element of USAKA is the systems, Army Space surveillance and object identification, and National Aeronautics and Space Administration (NASA) scientific and space programs. Programs systems. These systems include the four unique radars of the Kiernan Reentry Measurement Site (KREMS), super Recording Automatic Digital Optical Tracker required for general research and development, not allocable to specific R&D missions. This type of activity is appropriately funded in Budget Activity 6. Project D614 - US Army Kwajalein Atoll: The Army, Air Force, Navy and BMDO have programs planned which have significant test and data gathering requirements at USAKA. Air Force programs require firing at full range with complete data collection during late mid-course and terminal trajectory. BMDO programs require range available on and in the vicinity of USAKA. Data collection on objects in space remains significant because the Advanced Research Project Agency (ARPA) Long-Range Tracking and Instrumentation Radar (ALTAIR), located at USAKA, is one of only three sensors world-wide that has deep-space tracking capability. Programs supported Theater Missile Defense (TMD) requirements; NASA's Space Transportation System (STS), Orbital Debris Measurement Program, Small Expendable Deployer System sensors to collect technical data in support of programs being conducted at USAKA. These test data cannot be obtained except through the use of technical facilities include Air Force programs Peacekceper, Minuteman III, and Delta; Army/BMDO's Strategic Target System (STARS), Midcourse Space Experiment (MSX), and and Orbital Debris Radar Calibration Spheres, along with the Air Force Space and Missile Center's associated programs.

| BUDGET ACTIVITY | |

6 - Management Support

0605301A Army Kwajalein Atoli

- Continue to support Army, BMDO, NASA, and Air Force developmental and operational testing requirement. Continue integration of the range technical support contract effort. Develop Alternate Launch Site to support Tactical Missile Defense (TMD). (50635)
 - Provide logistical support to self contained islands of USAKA. (45474)
- Continue support and physical security upgrades to existing USAKA facilities. (575)

FY 1997 Planned Program:

- Management support (salaries, training, travel, SSDC matrix support, etc.). (8118)
- Accomplish BMAR projects (runway repairs. unaccompanied personnel housing). (9521)
- Procure POL.(11213)
- Procure other mission operating supplies. (12383)
- Provide air and sea transportation (cargo to and from continental United States). (6870)
- Continue improvement and modernization of non-major and sustaining range instrumentation and facilities. (2945)
- Continue to support Army, BMDO, NASA, and Air Force developmental and operational testing requirement. Continue integration of the range technical support contract effort. (48062)
 - Provide logistical support to self contained islands of USAKA. (44125)
- Continue support and physical security upgrades to existing USAKA facilities. (561)

Project MAC2 - Host Nation Compliance - USAKA: Resources for this program are used to fund legally mandated environmental compliance activities including host nation and U.S. environmental laws and regulations. Resources were transferred to this program from PE 0605856A (Environmental Compliance - RDT&E), to provide continued funding of environmental compliance issues and disposal of hazardous waste at USAKA. Funds are realigned to PE's 0605853A, 0605854A, and 0605856A for FY96 thru FY 01.

FY 1994 Accomplishments:

- Continued support of Logistic Support Cantractor Environmental Compliance Oversight Program. (600)
 - Continued shipment of hazardous was es to off-island disposal. (200)
- Continued testing of materials to determine hazardous characteristics as required by regulation. (90)
- Continued identification, removal, and off-island disposal of asbestos containing materials. (125)
- Operated solid waste incinerators. (200)
- Continued integrity testing of underground storage tanks. (30)
- Constructed and upgraded hazardous materials dispensing and staging areas to comply with regulations. (150)
- Completed cleanup/removal/disposal of hazardous wastes from Kwajalein land fill burn pits. (350)
- Continued development of Spill Contingency Plan to comply with Clean Water Act. (50)
- Continued identification, removal, and off-island disposal of Polychlorinated Biphenyl (PCB) dielectric fluids and equipment. (150)

Program funding will also include efforts toward developing TECOM's Virtual Proving Ground concept to include procurement of essential equipment, personnel training initiative is currently supported by the service Vice Chiefs of Staff in their role as the T&E Board of Directors. This PE finances indirect test operating costs not billable to test customers, maintenance cost of test facilities, replacement of test equipment and test modernization projects to maintain current testing capabilities and improvements to safety, environmental protection and efficiency of test operations. This PE does not finance reimbursable costs directly identified to a user of these ranges; these direct and facility modernization to support Force XXI testing requirements. Current testing capabilities are not duplicated within DoD and represent baseline requirements to required to assure technical performance adherence to safety requirements, reliability, logistics supportability, and quality of materiel in development and in production. Center, Fort Rucker AL; and Redstone Technical Test Center, Redstone Arsenal, AL; and a capability to perform test design and assessment functions. Technical test committed at the highest senior service levels to be the lead agency for ground vehicles, gun munitions, surface to air missiles, and chemical/biological testing. This assure acceptable risk to the soldier as new technologies emerge into fielded weapons systems. As part of the DoD RELIANCE initiative, the Army (via this PE) has through production within the acquisition cycle at four Major Range and Test Facility Bases: Yuma Proving Ground, AZ, Combat Systems Test Activity, Aberdeen Proving Ground, MD; Dugway Proving Ground, UT; White Sands Missile Range, NM. This PE also sustains a technical test capability at: Aviation Technical Test capabilities at each test range have been uniquely established, are in place to support test and evaluation (T&E) requirements of funded weapons programs, and are A. Mission Description and Budget Item Justification: Sustains a technical test capability for testing DoD materiel, weapons and weapons systems from concept

costs are borne by materiel developers and project/product managers in accordance with DoD funding policies. To accommodate T&E consolidations within the Army, the been consolidated under Yuma Proving Ground effective 1 Oct 94. Effective 1 Oct 96, it is the Army Plan to consolidate Aviation Technical Test Center at Yuma Proving following organization realignments are in place: Electronic Proving Ground has been consolidated under White Sands Missile Range and Cold Regions Test Center has time costs associated with consolidations, and essential modernization of test ranges and facilities. Test ranges support operations are required for general research and Ground. To accomplish these objectives and still conduct a viable T&E test capability requires that sufficient funding be available for personnel termination costs, onedevelopment; therefore, this PE is appropriate for inclusion in Budget Activity 6.

and other tests of aircraft armament, long-range cannon artillery, air delivery, and mobility systems. Major facilities include an artillery firing range; Army's only tracking Realignment and Closure Act (BRAC). Effective FY95, YPG assumed management of all natural environment testing (desert, cold weather, and tropic) with no change in physical locations (tropic testing will continue in Panama and cold weather testing in Alaska). Effective FY97, it is the Army plan to consolidate aviation testing currently air-to-ground aircraft armament range with precision real-time instrumentation; the Army's only weapons at anacy range with actual targets for testing direct fire aircraft terrain provide testers with conditions found in the Middle East and other desert areas. YPG's mission is to plan, conduct, analyze, and report the results of development and tank weapons; an instrumented air delivery test area; and desert and dust mobility test areas. YPG is designated as the DoD primary test site for electromagnetic/ specialty site for land vehicle testing. YPG assumes the full munitions production acceptance testing mission from Jefferson Proving Ground in FY95 under the Base Project DE90 Yuma Proving Ground: Yuma Proving Ground (YPG), AZ is DoD's primary artillery, air delivery and desert test range. Vast tracts of varied desert electrothermal gun systems under Project Reliance. Under Reliance, YPG is also designated as the primary site for the conduct of indirect fire gun munitions and a managed by Aviation Technical Test Center (ATTC), Ft. Rucker, Alabama and Edwards AFB, California to YPG.

FY 1994 Accomplishments:

- Approximately 325 tests were accomplished. Some of the systems tested include: (16534)
 - Heavy Equipment Transportation System
 - M762/767 Artillery Electronic Fuze
- Improved Recovery Vehicle
- **BRADLEY Fighting Vehicle System**
- Advanced Field Artillery System (AFAS)
- Field Artillery Resupply Vehicle (FARV-A)
- Range modernization which included upgrade of the Castle Dome heliport complex (875)

FY 1995 Planned Program:

- Approximately 320 tests will be accomplished. Some of the systems to be tested include: (20604)
 - 155MM SADARM
- Advanced Field Artillery System (AFAS)
- Wide Area Mine (WAM)

Project DE91 Combat Systems Test Activity: Combat Systems Test Activity (CSTA), Aberdeen Proving Ground, MD is DoD's designated lead agency for land vehicle automotive test sites, a radar tracking site facility, a unique robotic vehicle test facility, moving target simulation facility, live fire evasive target, armor/anti-armor depleted combat, special, and general purpose vehicles and ancillary automotive equipment; combat engineer equipment; and troop support and individual equipment. CSTA is the DoD tester for vulnerability/lethality of Army systems. CSTA also has a capability for a radiation environment simulating the neutron and gamma output of a nuclear testing and Congressionally mandated live fire testing. Under Project Reliance, CSTA is designated as primary test site for land vehicle and direct fire gun munitions testing. CSTA is responsible for conducting development tests of weapons and weapon systems; munitions and components; survey and target acquisition equipment; weapon using a fast-burst nuclear reactor and prompt gamma pulse simulator and conducts nuclear radiation evaluations. This provides a key capability to replace underground nuclear tests. Major facilities include the Munson automotive test courses, firing rarges addressing a wide variety of firing capabilities, cross-country uranium containment facility (Super Box), the elevated rail threat launch facility, underwater test facility (Navy support), and a number of special test laboratories.

FY 1994 Accomplishments:

- Approximately 630 tests were accomplished. Some of the systems tested include: (36892)
 - Family of Medium Tactical Vehicles
- Navy ship structures shock testing
- Ground Combat Identification (CID)
- Armored Gun System
- Unmanned Ground Vehicle
- Halon Substitutes for Automatic Fire Extinguishing Systems
 - Generic Appliqué Armor for BRADLEY Fighting Vehicles
- Modernization projects included improvements to road test courses, correction of safety issue from building inspection, and correction of test site sedimentation and erosion problems. (1365)

FY 1995 Planned Program:

- Approximately 625 tests will be accomplished. Some of the systems to be tested include: (40649)
 - Armored Gun System
- Armored Mortar System
- · M1A2 ABRAMS Upgrade Program
- Armored Security Vehicle
- Soldier Enhancement Program
- Heavy Dry Support Bridge
 - Wide Area Mine (WAM)

PE NUMBER AND TITLE

blast, electromagnetic pulse), and a fully landlocked/secure test flight facility. WSMR is a primary test facility supporting nuclear effects testing under Project Reliance. Test capabilities include temperature, shock, vibration, and electromagnetic effects. WSMR facilities and services are extensively utilized by the Tri-Services, National processing system. Facilities include optical and calibration laboratories, inertial guidance test facilities, full spectrum nuclear effects facilities (i.e., radiation, thermal, Aeronautics and Space Administration, and other government agencies. Effective F'/95, management of the Electronic Proving Ground (DE94) is consolidated under surface-to-air and surface-to-surface testing under Project Reliance. Launch complexes are integrated into a modern, real-time data collection and data reduction

FY 1994 Accomplishments:

- Approximately 225 tests were accomplished. Some of the systems tested include: (42635)
 - PATRIOT Product Improvements
- DC-X Single Stage Rocket
- AVENGER/STINGER Product Improvements
- · Line of Sight Anti-Tank (LOSAT) Demo
- Close Combat Non-Line-of-Sight Missile Demo
 - Multiple Launch Rocket System (MLRS)
- Brilliant Anti-Armor Submunition (BAT)
- Range modernization projects included improvement/repair to Vibration and Temperature Test Facilities and establishment of an EPA certified waste analysis capability. (590)

FY 1995 Planned Program:

- Approximately 290 tests will be accomplished. Some of the systems to be tested include: (64758)
 - PATRIOT Product Improvements
- Forward Area Air Defense Command and Control (FAAD C2)
 - AVENGER Product Improvements
- Extended Range Rocket (MLRS)
- Brilliant Anti-Armor Submunition (BAT)
 - Tactical Electronic Surveillance System
- All Source Analysis System (ASAS)
- Army J/STARS
- SBIR/STTR (294)

FY 1996 Planned Program:

Approximately 270 tests will be accomplished. Some of the systems to be tested include: (53203)

(EMI velectro-Magnetic Compatibility (EMC)/TEMPEST test facility, environmental test facility, a systems test facility, a systems interoperability and computer software testing facility, an electronic realistic battlefield environmental facility, communication tests facility and an electro-optical systems test facility. The mission of creating, devel pring, and maintaining data bases for standard tactical deployment scenarios for electromagnetic capability and vulnerability will be continued. Effective FY95, Project DE94 Army Electronic Proving Ground: Electronic Proving Ground (EPG), Fort Huachuca, AZ, is unique within DoD because of it's electromagnetically command and control, optical/electro-optical, signal intelligence, and electronic warfare equipment and systems. EPG operates an electro-magnetic environment test "clean" environment, extensive real estate, low annual rainfall, and special facilities required to perform development/development-type tests for communications, facility, and electronic countermeasures vulnerability test facility, an unmanned aerial vehicle test facility, antenna test facility, Electro-Magnetic Interference many gement of EPG is consolidated under Project DE93, White Sands Missile Range.

FY 1:94 Accomplishments:

Approximately 160 tests were accomplished. Some of the systems tested include: (10308)

- CH47D Product Improvement Program
 - Special Operations Aircraft

FY 1997 Planned Program: Tests to be conducted have been included as part of the Project DE90 Yuma Proving Ground FY97 plan.

developmental and initial production assessment plans, test design, and subsequent independent analysis and assessment reports in support of all acquisition milestones to include recommendations for type classification and materiel release of non-major systems. Includes some 125-150 independent assessment plans and reports annually in individual equipment and chemical detection alarms and protections equipment. Beginning in FY1996, funding reflects realignment of Test Management and Safety Project D630 TECOM Test Design and Evaluation: This project provides for independent assessment of over 300 non-major systems. It encompasses design of the areas of munitions, w apons, electronics, communications, electronic warfare training devices, automotive and engineering equipment, bridging, clothing and Verification as a part of TECOM's Reshape Program.

FY 1994 Accomplishments:

- Continued test design and assessment program, addressing new development, production, and materiel changes. Items addressed included: (3790)
 - Army Integrated Thermal Targets
- Airborne Standoff Minefield Detection System
 - Laser Detecting Set AN/AVR-2
- Advanced Threat Radar Jummer
- Close Combat Tactical Trainer (CCTT) Aircraft Maintenance Vehicle (AMV)
- Laser Standoff Chemical Detector
- Self-Contained Toxic Environmental Protection Outfit Individual Microclimatic Cooling System
- Advanced Battledress Overgarment
- Vapor Protective Flame Resistant Undergarment
- Chemical/Biological Hardened Deployable Medical System (DEPMEDS)
 - Automatic Chemical Agent Alarm
- Remote Sensing Chemical Agent Alarm
 - C-17 Transport Army Interface
 - Miniature Binoculars

Proving Ground (DPG), UT; White Sands Missile Range (WSMR), NM; and Electronic Proving Ground, (EPG), AZ (became a directorate of White Sands Missile Range efforts; test methodology improvements, standardization, and international test procedures and methods; the development of specifications and prototype instrumentation Aviation Technical Test Center (ATTC), AL (scheduled for consolidation at Yuma Proving Ground in Sep 96); to support testing of advanced, high technology systems A. Mission Description and Budget Item Justification: Funds development, acquisition and sustainment of technical test instrumentation for the Army at the Major Ranges and Test Facility Bases (MRTFB) Yuma Proving Ground (YPG), AZ; Combat Systems Test Activity (CSTA), Aberdeen Proving Ground (APG), MD; Dugway and weapons developments. Included are efforts to identify advanced test technology long-range requirements and their integration into Department of Defense (DoD) required to forestall equipment failures and testing delays. Includes research and development effort directed toward support of installations or operations required for in Sep 94); Cold Regions Test Activity (CRTA), AK (became a directorate of Yuma Proving Ground in Sep 94); Redstone Technical Test Center (RTTC), AL, and not available on-the-shelf. FY 1996 funds the minimum level required to assure adequate test data for acquisition milestone decisions and reduce maintenance costs general research and development use and therefore is appropriate to Budget Activity 6.

instrumentation with one or more of the following attributes: satisfies Army requirements, used by multiple commands, high risk, produces a new developmental testing capability or requires intensive management during acquisition. Resources are realigned effective FY 1996 to PE 0604759A, Project D984 - Major Test and Evaluation Project D453 - Technical Test Instrumentation: This investment account develops and acquires major test technology to perform developmental testing of weapon systems at US Army Test and Evaluation Command (TECOM) activities (four of which are elements of the DoD MRTFB). Major instrumentation is defined as that

FY 1994 Accomplishments: No technical test instrumentation projects were funded in FY 1994

FY 1995 Planned Program:

- Instrumentation (LCI). (The LCI is a consolidation of Combat Vehicle Measurement System, Direct Fire Productivity Improvement, Combat Vehicle Performance and Advanced Armor Instrumentation. These projects are combined for project management efficiency.) This instrumentation supports milestone decisions on many Resume execution of the CSTA modernization plan and the Test & Evaluation Resource Investment Board (TERIB) test resource master plan for Land Combat emerging weapons like M1A2 Abrams tank and Advanced Field Artillery System. (2880)
 - Resume capability for system level Army Tactical Command and Control Systems (ATCCS) technical test at Electronic Proving Ground, AZ (EPG). (500)

- (RAJPO) Eglin AFB, acquiring and fielding hardware and software at all Army test organizations. GPS will provide common interoperable hardware and software for precision tracking of air and ground vehicle in the conduct of DoD testing. (100) Resume execution of the Army's portion of the Global Postuolining Systems
 - Resume development of the Fiber Optic Network (FON) project. This project links the LCI project to the information highway. (174)
 - Resume analysis of instrumentation requirements for new start projects. (118)
- Small Business Innovation Research (SBIR)\Small Business Technology Transfer (STTR) (12)

FY 1996 Planned Program: All resources realigned to project D984, PE 0604759A.

FY 1997 Planned Program: All resources realigned to project D984, PE 0604759A.

directed toward modeling and simulation and virtual test capabilities. Sustaining instrumentation maintains existing technical testing capability at Army est facilities by Project D628 - Test Technology and Sustaining Instrumentation: Test technology provides critical front end efforts for development of new test methodologies, test replacing unreliable, uneconomical, and irreparable instrumentation, as well as incremental upgrades of instrumentation and software, to assure adequate est data for standards, advanced test technology concepts for long range requirements, future test capabilities, and advanced instrumentation prototypes. Current initiatives are acquisition milestone decisions for projects such as Patriot, M1A2 Main Battle Tank, Army Advanced Field Artillery System (AFAS) and Javelin.

FY 1994 Accomplishments:

- Maintained existing capability by replacement and limited upgrade of worn out, obsolete or unserviceable equipment/instrumentation at Army technical test ranges.
- Replaced obsolete or unmaintainable flight test cockpit indicators required for airworthiness and weapons integration testing of Army aircraft at Avia ion Technical Procured pulse waveform generators/amplifiers, antenna systems and associated hardware in support of electromagnetic interference (EMI) testing of electronics communications and countermeasure equipment, aircraft auxiliary electrical equipment and other C4I systems at Electronic Proving Ground (EPG). (400)
- Refurbished vibration equipment to comply with new requirements of MIL-STD-810 at Yuma Proving Ground (YPG) and procured replacement env ronmental and metrology test equipment. (758) Test Center (ATTC). (1220)
 - Continued development of real-time graphics improvements at YPG in order to provide enhanced resolution of simulated terrain features to test high cost target detection sensors in realistic 3D models, significantly reducing actual firing of weapons using the detectors. (400)
- Improved acoustic scoring techniques and instrumentation for projectile tracking and impact points and replaced optics and electronic instrumentation at YPG. (1315)
- the-art interoperability and vulnerability to hostile countermeasures in an electromagnetic realistic battlefield environment, and acquired scenario generation capability Continued modeling and simulation efforts at WSMR-EPG, including development of computer models/simulation and man-in-the-loop hardware for testing state-ofto enhance EPG's testing of tactical electronic message equipment. (785)
 - Maintained instrumentation and continued development of methodologies for meteorological support for Army RDT&E. (310)

6 - Management Support

0605602A Army Tech Test Instr & Targets

- Continued acquisition of environmental monitors for Nuclear Effects testing at White Sands Missile Range (WSMR). (600)
 - Sustained optical tracking systems and development software for control of the QF-4 drone at WSMR (553)
- Continued refurbishment of small missile tracking capability, completed millimeter wave (MMW) sæker test equipment and procured data acquisition equipment at Redstone Technical Test Center (RTTC). (685)
 - Initiated multi-year effort for refurbishment and modernization of the backbone radar tracking capability (AN/FPS16) at WSMR (1450)
- advanced missile systems to reduce requirements for system level testing and supported R&D and production testing. Three year project ending in FY 1996. (800) Initiated acquisition of instrumentation for Subsystem Test and Simulation Facility at RTTC to provide test capability for subsystem and component testing of
 - Continued replacement of chemical/biological laboratory analysis instrumentation to sustain the Nuclear, Biological, Chemical (NBC) Defense mission at Dugway Proving Ground (DPG). Completed second phase of Mission Control Center (MCC). (900)
- Replaced two worn-out instrumentation vans to transport and shelter test instrumentation at remote sites at Cold Regions Test Activity (CRTA). (400)
- Continued installation of data acquisition equipment and sensors on the combat vehicle survivability test ranges and the live fire vulnerability ranges at Combat Systems Test Activity (CSTA) to support highly complex Congressionally mandated live-fire testing. (1025)
- Acquired high-speed, multi-media data handling equipment at CSTA (interfacing to the Fiber Optic Network), automating test management and data flow processes to accommodate pending reductions in the worldorce. (1150)
- Continued to develop test operations procedures (TOPs) and international test operations procedures (ITOP) to ensure quality and consistency of test results throughout Army and for international cooperative applications. (2910)
- Initiated studies for testing Advance Field Artillery System at YPG. (72)
- Provided management and support costs. (3501)
- Provided a remote control capability for the WSMR Salinas Peak communications and data transfer site and WSMR Command Destruct system in accordance with personnel downsizing and safety assurance initiatives. (780)
 - Updated the WSMR Airspace Display and Control System in accordance with FAA requirements for airspace management. (750)
- Initiated modification of the WSMR range timing to use satellite timing distributed by the Global Positioning System. (200)
- Developed project RAVEN functional prototype for Electronic Warfare demonstration. (900)

FY 1995 Planned Program:

- Maintain existing capability by replacement and limited upgrade of worn out, obsolete or unserviceable equipment/instrumentation at Army technical test ranges. (602)
 - Continue modeling and simulation efforts at Electronic Proving Ground (EPG), in order to test C4I systems in their intended operational environments. (500)
- Design, develop, integrate and acquire simulation, stimulation and emulation and data reduction software and hardware for imagery systems requiring actual sensor inputs at EPG. (550)
 - Continue the acquisition of the Standoff and Tactical Jaminer capability to control jamming instrumentation for BPG. (400)
- Integrate Enhanced Position Location and Reporting System (EPLRS) Test Control Center into the Army Tactical Command and Control System (ATCCS). Develop system/segment design and associated documentation and software requirements at EPG. (650)
 - Refurbish nine Climatic Facility Chambers and bring them into line with EPA guidance at Yuma Proving Ground (YPG). (270)

FY 1995 Planned Program (continued):

- Continue acoustic scoring techniques and instrumentation at YPG for projectile tracking and impact points. (470)
 - initiate follow-on studies to enhance the application of simulation to testing at YPG. (115)
- Continue acquisition of Flight Test Cockpit Indicators at Aviation Technical Test Activity (ATTC). (276)
 - Replace obsolete medium speed aircraft instrumentation with CAIS compatible recorders at ATTC. (370)
 - Acquire Telemetry Front-End Data Processing Equipment at ATTC. (180)
- Acquire Common Airborne Instrumentation System (CAIS) at ATTC (Accelerating program from several years into one). (716)
 - Continue acquisition of environmental monitors for nuclear effects testing at WSMR. (450)
- Continue refurbishment of backbone radar tracking capability (AN/FPS16) at WSMR. (2761)
- Procure instrumentation to characterize the atmosphere for testing optics and electromagnetic interference testing at Redstone Technical Test Center (RTTC). (350)
 - Continue refurbishment of data acquisition capability required for small missile testing at RTTC. (650) Continue acquisition of instrumentation for Subsystem Test and Simulation Facility at RTTC. (800)
- Continue replacement of chemical/biological laboratory analysis instrumentation to sustain the Nuclear, Biological, Chemical (NBC) Defense mission at Dugway Proving Ground (DPG). (936)
- shock sensors and ammunition compartment vulnerability for Composite Armored Vehicle, Bradley, M1A2 upgrades, Automotive Test Rig and Component Advanced Develop and acquire rugged combat vehicle survivability instrumentation such as fiber optic sensors, transient temperature measurement devices, hardened ballistic Technology Demonstrator (CAT-D) workload at Combat Systems Test Activity (CSTA). (972)
- Maintain instrumentation and continue development of methodologies for meteorological support for Army RDT&E. (1400)
- Improve capabilities to measure dust, atmospheric transmissivity, and laser scoring at YPG. (372)
- Develop test methodology and requirements/specifications for instrumentation to test combat vehicles with advanced embedded computing/electronics systems such as the M1A2, Automatic Target Recognition (ATR), Advanced Field Artillery System (AFAS) and Component Advanced Technology Demonstrator at Combat Systems Test Activity. (730)
 - Continue to acquire high-speed, multi-media data handling equipment at CSTA (interfacing to the Fiber Optic Network), rugged high-speed video imaging, automating test management and data flow processes to accommodate pending reductions in the workforce. (1177)
- Develop and acquire modeling and simulation software/hardware, develop validated data bases to support vehicle signature and tire performance models and stimulating equipment at CSTA. (430)
- Sustain optical tracking systems and continue to develop software for control of the QF-4 drone at WSMR. (515)
- Initiate a study to use radar to capture high altitude missile performance data at WSMR. (175)
- Continue to develop test operations procedures (TOPs) and international test operations procedures (ITOP) to ensure quality and consistency of test results throughout Army and for international cooperative applications. (398)
- Provide management and support costs. (4576)
- Continue to modify the WSMR Command Destruct system for remote control capability in accordance with personnel downsizing and safety assurance initiatives.

February 1995 DATE C605604A Survivability/Lethality Analysis RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 6 - Management Support

Groups (TIWG) and program reviews, review acquisition documentation, provide government testers with technical support, and support milestone decision reviews; and Managers (PMs), and independent evaluators with EW, chemical, biological, nuclear, and ballistic expertise to conduct special studies, support Test Integration Working environment effects (E3), decoys, conventional ballistics and nuclear/biological/chemical (NBC) effects on Army soldiers and systems. The PE work efforts provide U.S. and engineering analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations. Activities in progress include assessment of the effects of smokes and obscurants, passive countermeasures, tactics, lasers, high-power microwave, electro-optical/radio frequen y (EO/RF) jammers, electromagnetic A. Mission Description and Budget Item Justification. This Program Element (PE) funds activities and functions to conduct objective and integrated survivability and and biological battlefield threats and meteorological conditions on Army individual soldiers and systems. The work is accomplished through threat research, theoretical soldier/system's survivability effectiveness in battlefield threat environments. Recommendations are provided to the materiel and combat developers on how to mitigate esthality and set (SLA) for all major and designated non-major Army systems. The analyses quantify the effects of electronic warfare (BW), ballistic, nuclear chemical, Survivability/Lethality Analysis Directorate (SLAD). This PE supports Headquarters, Department of the Army (HQDA), Program Executive Offices (PEOs), Program: soldier/system deficiencies and enhance their survivability. This PE funds civilian salaries, travel, development and maintenance of equipment and facilities, general Army decision makers, materiel and combat developers, system users, and independent evaluators critical soldier and syster, survivability analyses that quantify the management, administrative and contractor support required for program execution. This effort is conducted by the U.S. Army Research Laboratory (ARL) is appropriately funded in Budget Activity 6.

NOTE: This PE is restructured effective FY 1996 to provide management visibility for survivability/lethality projects and funds in a single PE.

identified and hardening fixes identified as appropriate. SLV analysis directly supports major decision milestone reviews, acquisition documentation, test and evaluation master plans, and cost/operational effectiveness analyses. Through FY 1995, provides assessment of acoustic technology which might be developed to exploit potential battlefield threats to include conventional ballistic, electronic warfare (EW), directed energy, and chemical, biological, and nuclear. Aircraft SLV deficiencies are Project DC10 - Aviation Systems Survivability/Lethality/Vulnerability (SLV): Project investigates the SLV of Army aviation systems to the full spectrum of susceptibilities of helicopters. Beginning in FY96, work performed in this project is restructured to Project D672.

FY 1994 Accomplishments:

- Through laboratory simulations, computer modeling, and field experiments, conducted EW vulnerability analysis (EWVA) and provided EW support as part of the integrated SLV program for Comanche, Apache Longbow, Chinook helicopters, and Unmanned Aerial Vehicles (UAV). (1078)
- Through laboratory simulations, computer modeling, and field experiments, conducted ballistic vulnerability investigations/analysis of Comanche, Apache Longbow, and Special Operations helicopters (MH-60 and MH-47E). (858)
 - Conducted theoretical investigation of Comanche and Apache Longbow vulnerability to low level out-of-band RF countermeasures. (200)
- Characterized optical/electro-optical devices and IR signatures of Comanche, Kiowa Warrior, Apache Longbow, and Chinook helicopters. (200)
 - Conducted computer modeling and simulation as part of EWVA for Apache Longbow, Comanche, and UAV. (117)
- Assessed advanced tracking and target identification algorithms using ARL test bed for helicopter applications. (1261)

|--|----------------------|--|
| | recipality Allalysis | |

FY 1995 Planned Program:

- Through laboratory simulations, computer modeling, and field experiments, conduct, EWVA and ballistic vulnerability investigations and analysis, and provide EW support for SLV of Army aviation systems such as Comanche, Apache Longbow, Chinook helicopters, and UAV. (2386)
- Expand the survivability/lethality integrated analysis program to address improvements/modifications to all Army aviation systems across all battlefield threats. (626)
 - Support development and execution of live fire test and evaluation for Army aviation systems including Comanche and Special Operations (MH-60K and MH-47E) helicopters. (416)
 - Assessment of acoustic technology for use as low cost long range battlefield sensors for exploiting vulnerabilities of helicopters. (1203)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (35)

FY 1996 Planned Program: Project restructured to Project D672 within this PE.

FY 1997 Planned Program: Project restructured to Project D672 within this PE.

Project D089 - Aircraft Certification: Project performs ail engineering functions essential for certifying the airworthiness of assigned Army aircraft. Performs safetyqualification/testing on field aircraft and material changes, for all assigned Army aircraft systems. Provides airworthiness engineering support to the Aviation Program of-flight investigations/assessments and issues messages to the field. Manages/executes the Army's Aeronautical Design Standards (ADS) Program. The ADS is a systems/subsystems. Manages the test and evaluation process to support the airworthiness qualification of ilevelopment and fielded aircraft systems. (This project continuous evolving process incorporating revisions for each change to the standard design of an aircraft system. Manages airworthiness approval of new vendor Executive Office and Aviation and Troop Command Program/Project/Product Manager requirements for major development/modification and any future transfers to PE 065606A Aircraft Certification in FY96)

FY 1994 Accomplishments: Project not funded.

FY 1995 Planned Program:

- Manage/execute technical and airworthiness qualification mission for PEO Aviation force modernization aircraft systems. (759)
 - Manage/execute the Army Aeronautical Design Standards Program. (152)
 - Update airworthiness standards. (90)
- Continue to ensure safety-of-flight investigations/assessments for PEO Aviation force modernization aircraft systems. (607)
- Provide continuing engineering support for emerging technology upgrades to PEO Aviation force modernization aircraft systems. (920)
 - Continue to provide test management capability for PEO Aviation program/project/product managers. (403)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (63)

FY 1996 Planned Program: Project funded under PE 06506A Aircraft Certification in FY96.

Y 1997 Planned Program: Project funded under I'E 06506A Aircraft Cerufication starting in FY96.

Project D181 - Antiradiation Missile Counter-Countermeasures (ARM-CCM): The ARM-CCM project objectives are to understand the capabilities of threat ARMs and how they work. The project provides simulation and hardware tools for both proposed and fielded ARM countermeasures as well as techniques and methodologies which support ARM-CCM investigations.

FY 1994 Accomplishments: Program not funded.

FY 1995 Planned Program:

- Conduct/coordinate EWVA of ARM threats to U.S. and Allied systems in support of the Army ARM Counter-Warfare Program. (152)
- Provide simulation support to ARM-CCM projects. (299)
- Provide survivability analysis of proposed and fielded ARM countermeasures. (292)
- Develop hardware, tools, techniques, and methodologies to support ARM-CMM. (298)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (22)

FY 1996 Planned Program: Beginning in FY 1996 work and funds restructured to Projects D670, D671, D672, D675, and D678 within this PE.

FY 1997 Planned Program: Beginning in FY 1996 work and funds restructured to Projects D670, D671, D672, D675, and D678 within this PE.

chemical/biological contamination effects. This project supports development of the Army initiative to reduce systems' susceptibility to out-of-band radio frequency (RF) survivability (SLV) analysis on Army systems and funds the investigation of the lethality/vulnerability of smart munitions to the full spectrum of battlefield threats. The countermeasure effects. This project also includes the Army Electronic warfare (EW) signature measurement program and the assessment of laser countermeasure (CM) Project D190 - Integrated Analysis: This project provides supporting technology and data for the Army's integrated survivability analysis program to conduct effects on Army optical/electro-optical (O/EO) systems. This project also supports investigations of new technologies/methodologies required for SLV analyses analysis is integrated across all battlefield threats, i.e., conventional ballistic, electronic warfare, directed energy, nuclear weapons effect, and ..uclear and

FY 1994 Accomplishments:

- Managed the U.S. Army survivability/lethality integrated analysis programs (Air Defense, Aviation Systems, C4I/IEW, Ground Systems, Munitions, and Integrated Soldier System) and participated in the ARL FOCUS programs, Battle Labs and ATD initiatives, and special projects for ARL, AMC, and HQDA. (1855)
 - Army munitions systems that are in development, production, or undergoing product improvements. Examples of systems under investigation to supp art decision Through laboratory simulations, computer modeling, and field experiments, conducted electronic warfare and ballistic survivability/vulnerability analysis of U.S. milestones are Javelin, Hellfire Longbow, and Wide Area Mine (WAM). (2496)

- Exploited state-of-the-art computer science and graphics techniques to improve geometry processing and display of materiel systems for ballistics lethality analysis.
- Established a computer virus laboratory and analyzed security models in operating systems and the effects of malicious electronic attack on imbedded processors. (302)
 - Developed computer control codes, digital simulation models, and methods to increase power spectral density waveforms for EWVA programs. (591) Conducted integrated survivability analysis in support of The Enhanced Integrated Soldier System (TEISS). (239)

FY 1995 Planned Program:

- Manage the U.S. Army survivability/Iethality integrated analysis programs (Air Defense, Aviation Systems, C4I/IEW, Ground Systems, Munitions, and Integrated Soldier System) for 38 systems under development or in improvement cycles and participate in the ARL FOCUS programs, Battle Labs and ATD initiatives, and special projects for ARL, AMC, and HQDA. (1970)
 - Through laboratory simulations, computer modeling, and field experiments, conduct, electronic warfare and ballistic survivability/lethality analysis process for U.S. Army smart munitions including Javelin, Hellfire Longbow, and WAM. (3228)
 - Investigate the effects of new/advanced threat technology on systems in the integrated analysis area. (1585)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (19)

FY 1996 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D670, D671, D675, D677, D678, and D679 within this PE.

FY 1997 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D670, D671, D675, D677, D678, and D679 within this PE.

spectrum of battlefield threats; and the lethality of Army fire support munitions (smart and conventional). Analysis will support weapon requirements, test and evaluation Project D234 - Close Combat/Fire Support Survivability/Lethality: Project investigates the survivability and vulnerability of Army ground combat systems to the full master plans, cost/operational effectiveness analysis, and major decision milestones.

FY 1994 Accomplishments:

- systems including the AFAS/FARV, AGS, Breacher, Bradley Fighting Vehicle System (BFVS), M1 Abrams Main Battle Tank, and M109 Howitzer systems. (1655) Through laboratory simulations, computer modeling, and field experiments, conducted ballistic survivability/lethality investigations/analysis of U.S. Army ground
 - Performed in depth comparison of the predictions of the Stochastic Quantitative Analysis of System Hierarchies (SQuASH) probabilistic computer models for armored vehicles with the results of the live fire test and evaluations (LFT&E) programs. (1137)
 - Conducted EWVA of the U.S. Army ground systems including AFAS/FARV and Breacher. (1426)
- Conducted EWVA investigations on SADARM, STAFF, M829A2, BAT, LOSAT, TOW ITAS, and ATACMS (APAM) munitions. (1391)
- Provided signature measurements and computer modeling and simulation for EWVA of U.S. Army ground systems and smart munitions. (953)

- Through laboratory simulations, computer modeling, and field experiments, conduct, EWVA and ballistic survivability/lethality investigations/analysis of U.S. Army ground systems such as AFAS/FARV, AGS, Breacher, Bradley, MI Abrams, and M109 Howitzer systems. (3292)
 - Conduct EWVA investigations on SADARM, STAFF, M829A2, BAT, LOSAT, TOW ITAS, and ATACMS (APAM) munitions. (1510)
- Provide signature measurements and computer modeling and simulation for integrated survivability/lethality analyses of U.S. Army ground systems and smart
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (69)

FY 1996 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D677 and D678 within this PE.

FY 1997 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D677 and D678 within this PE.

Project D235 - Missile Counter-Countermeasure Technology: Supports Program Management Offices by development of CM/CCM hardening techniques that missile systems use against laser, RF, and directed energy threats. Supports modeling to investigate vulnerabilities of systems to air defense systems. Supports investigations of missile signatures and exploitability. Investigates technology to harden optical windows against lasers, RF, and directed energy threats. Also funds salaries, travel, equipment, and general management/administrative support.

FY 1994 Accomplishments:

- Continued development of surface current dissipation coatings and selective surfaces patterning techniques for CCM applications. (198)
 - Began testing and analysis of surface current dissipation coatings for hardening of missile systems. (198)
- Tested and analyzed missile systems and subcomponents for Radar Cross Section (RCS), Unintentional Radiated Emissions (URE), Special Electromagnetic Interference (SEMI) effects, and High Power Microwaves (HPM) in the context of weapon systems hardening. (100)
 - Improved upon existing thin film materials for Army missile systems hardening. (50)
- Assessed missile system CM/CCM requirements for current/future system threats and conducted missile performance studies and analysis in an EW environment. (61)
 - Developed one-on-one simulation for analysis of missile systems against known and projected threats. (50)

FY 1995 Planned Program:

- Continue to improve/upgrade hardening techniques, investigate, and develop new technology advanced CCM application. (175)
- Continue to conduct test and analysis to determine the susceptibility characteristics of selected weapon systems to specific environments and to specify the appropriate CCM techniques and validate the CCM effectiveness. (308)
- Verify and validate the one-on-one simulation with measured data to determine the region of validity. (177)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (12)

the full spectrum of battlefield threats and recommends fixes is improve their battlefield survivability. The results are used by each Project Manager (PM) and the Program Project D267 - Air Defense/Missile Defense System Vulnerability: Provides the survivability/lethality analysis of U.S. Army air defense and missile defense systems to Executive Officer (PEO) to direct veapon system development efforts and structure product improvement programs; by the user to develop doctrine and tactics; and by decision makers in formulating program/production decisions. Beginning in FY 1996 the work and funds are restructured to Projects D670 and D671 within this PE.

FY 1994 Accomplishments:

- Through laboratory simulations, computer modeling, and field experiments, conducted EWVA of U.S. Army air defense systems including PATRIOT, Stinger-RMP, Avenger, Corps SAM, HAWK, Ground Based Sensor (GBS), and Multi-Role Survivable Radar (MRSR). (2413)
 - Conducted EWVA of U.S. Army missile defense systems including the Theater High Altitude Area Defense (THADD) system, the Extended Range Interceptor (ERINT), and the Ground Based Radar (GBR). (1263)
 - Conducted ballistic susceptibility/vulnerability/lethality analysis of U.S. Army air defense/missile defense systems. (638)
- Determined the physical relation and functional capabilities of aerospace systems with degraded states due to ballistic damage. (1054)
- Provided EWVA modeling and simulation support, both hardware-in-the-loop and digital simulations, for U.S. Army air defense/missile defense systems. (1008)

FY 1995 Planned Program:

- Conduct EWVA of U.S. Army air defense systems including PATRIOT, Stinger-RMP, Avenger, Corps SAM, HAWK, GBS, and MRSR. (2979)
 - Conduct EWVA of U.S. Army missile defense systems including THAAD, ERINT, and GBR (1559)
- Conduct ballistic susceptibility/vulnerability/lethality analyses of U.S. Army air defense/missile defense systems. (808)
- Provide EWVA and ballistic modeling and simulation support for survivability/vulnerability/lethality analysis of U.S. Army air defense/missile defense systems.
- Develop necessary SLV analyses, methodologies, capabilities and techniques to ensure soldier survivability. (557)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (91)

FY 1996 Planned Program: Beginning in FY 1996 work and funds restructured to Projects D670 and D671 within this PE.

FY 1997 Planned Program: Beginning in FY 1996 work and funds restructured to Projects D670 and D671 within this PE.

threats. Provides field threat environment support for EWVA. Analyzes vulnerabilities of foreign threat weapons and command, control, communications, computers and Project D626 - C41 Survivability: Supports survivability analysis of Army communications and electronic equipment against the full spectrum of friendly and enemy

Page 7 of 14 Pages

developers and technical capability information to the intelligence community. Supports Army initiatives in vulnerability reduction of C4I/IEW systems against the full intelligence (C41) and Intelligence Electronic Warfare (IEW) systems to U.S. Army EW systems. Provides threat weapon electronic design data to countermeasure spectrum of battlefield threats. In FY 1996, work and funding in this project is restructured to Projects D670 and D675 within this PE.

FY 1994 Accomplishme 14s:

- Conducted integrated survivability/lethality analysis for ATCCS and all of its functional area systems. (1342)
- Through laboratory simulations, computer modeling, and field experiments, performed EWVA and ballistics SLA on Army communications systems including SCAMP, SMART-T, MSE, and SINCGARS. (1338)
- Through laboratory simulations, computer modeling, and field experiments, performed EWVA and ballistics SLA on Army Intelligence Electronic Warfare (IEW) systems including JSTARS and Battlefield Combat Identification System (BCIS). (1062)
- Enhanced techniques for and provided Special Electromagnetic Interference (SEMI) analysis of Army C4I systems. (597)
- Enhanced capabilities to measure target signatures and performed EWVA of systems to RF countermeasures. (1327)

1995 Planned Program: 7

- Conduct integrated survivability/lethality analysis for the Army Battlefield Command System (ABCS) and all of its functional area systems and their improvements.
- Perform EWVA and ballistics SLA on Army communications systems and their improvements. (2201)
- Through laboratory simulations, computer modeling, and field experiments, perform EWVA and ballistics SLA on Army IEW systems such as BCIS, JSTARS, and enhanced Firefinder. (1792)
- Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992. (59)

FY 1996 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D670 and D675 within this PE.

FY 1997 Planned Program: Beginning in FY 1996 work and funding restructured to Projects D670 and D675 within this PE.

analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations. This effort also supports HQDA, PEOs, PMs and independent documentation review, and provides Government to iters with technical support. Horizontal Technology Integration systems include 2ND Generation FLIR (2ND GEN recommendations are made to PEO/PMs to provide hardening fixes early on in program development. This work is accomplished through theoretical and engineering evaluators with EW, chemical, biological, nuclear, 'neteorological, and ballistic expertise to conduct special studies, support TIWGs and program reviews, acquisition Project D670 - Emerging Technology Systems: This project performs integrated SLA for a category of systems which includes Horizontal Technology Integration FLIR), Battlefield Combat Identification System (BCIS), Global Positioning System (GPS), and Enhanced Position Location Reporting System (EPLRS). Advanced systems, Advanced Technology Demonstration initiatives, and Anti-Radiation Missile (ARM) Counter-ARM systems. Survivability deficiencies are identified and

echnology Demonstration initiatives include Active Protection Systems (APS), Missile Countermeasure Devices (MCD) and Advanced Laser Protection Program (ALPP). ARM Counter-Arm efforts assess threat technologies against Theater Missile Defense (TMD), PATRIOT, JSTARS, Corps SAM, and FAAD-C21 ground based sensors.

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1996 Planned Program:

- analyses. Develop necessary test beds to conduct laboratory and field investigations, and prepare interim survivability analysis reports. This work supports 2ND GEN Conduct EW performance analyses, to include infrared (IR), radio frequency (RF), and electro-optical spectrums to support integrated survivability and lethality FLIR, BCIS, GPS, APS, EPLRS, and ALPP. (2861)
- Conduct analyses to determine ballistic effects. Develop system description models, perform damage simulations, and collect experimental data to support integrated survivability and lethality analyses. Develop necessary test beds to conduct experiments, and prepare interim survivability analysis reports. This work support 2ND FLIR, BCIS, GPS, APS, and EPLRS. (1500)
- Conduct analyses to address nuclear hardening and survivability, chemical and biological warfare contamination and decontamination, and dirty battlefield conditions. Develop necessary test beds to conduct laboratory and field investigations, and prepare interim survivability analysis reports. This work supports 2ND GEN FLIR, BCIS, GPS, APS, EPLRS, and ALPP. (1209)

FY 1997 Planned Program:

- Conduct EW vulnerability assessments to support integrated survivability and lethality analyses of emerging technology systems and horizontal technology applications. Develop necessary test beds to conduct laboratory and field investigations, and prepare interim survivability analysis reports. (2762)
- Conduct ballistic effects investigations, develop system description models, perform damage simulations, and collect experimental data to support integrated survivability and lethality analysis reports. (1525)
- battlefield conditions to support integrated survivability/lethality analyses of emerging technology systems and horizontal technology applications. Develop necessary Conduct engineering investigations addressing nuclear hardening and survivability, chemical and biological warfare contamination and decontamination, and dirty test beds to conduct laboratory and field investigations, and prepare interim survivability analysis reports. (1225)

decision makers in formulating program/production decisions. Also funds salaries, travel, equipment/facilities, and management/administrative support needed to execute Executive Officer (PEO) to direct weapon system development efforts and structure product improvement programs; by the user to develop doctrine and tactics; and by Project D671 - Air Defense/Missile Defense Systems: Provides the survivability/lethality analysis of U.S. Army air defense and missile dafense systems to the full spectrum of battlefield threats and recommends fixes to improve their battlefield survivability. The results are used by each Project Manager (PM) and the Program

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1996 Planned Program:

- Conduct the electronic warfare vulnerability assessment for U.S. Army air defense and missile defense systems that are in Gevelopment, undergoing P31, or have been recently fielded. Examples of such systems are PATRIOT, Corps SAM, Stinger-RMP, Avenger, GBS, TMD-GBR, MRSR, THAAD, and ERINT. (4076)
 - Conduct the ballistic survivability/lethality analysis for U.S. Army air defense and missile defense systems. (971)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army air defense and missile defense systems. (1215)
 - Provide integrated survivability/lethality analyses to support scheduled air defense/missile defense program decision milestones in FY96. (275)

FY 1997 Planned Program:

- Conduct the electronic warfare vulnerability assessment for U.S. Army air defense and missile defense systems that are in development, undergoing P3I, or have been recently fielded. Examples of such systems are PATRIOT, Corps SAM, Stinger-RMP, Avenger, GBS, TMD-GBR, MRSR, THAAD, and ERINT. (3962)
 - Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army air defense and missile defense systems. (1241)
 - Conduct the ballistic survivability/lethality analysis for U.S. Army air defense and missile defense systems. (992)
- Provide integrated survivability/lethality analyses to support scheduled air defense/missile defense program decision milestones in FY97. (281)

identified and hardening fixes identified as appropriate. SLV analysis directly supports major decision milestones reviews, acquisition documentation, test and evaluation master plans, and cost/operational effectiveness analyses. In FY 1996, provides for assessment of acoustic technology which might be developed to exploit potential Project D672 - Aviation Systems: Project investigates the SLV of Army aviation systems to the full spectrum of battlefield threats. Aircraft SLV deficiencies are susceptibilities of helicopters.

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1996 Planned Program:

- Examples of such systems are RAH-66 Comanche, AH-64D Longbow Apache, MH-60K & MH-47E Special Operations Aircraft, Short-Range Unmanned Aerial Conduct the electronic warfare vulnerability assessment for U.S. Army aviation systems that are in development, undergoing P31, or have been recently fielded. Vehicle, OH-58D Kiowa Warrior, CH-47D Chinook, and UH-60Q Ambulance. (2549)
- Conduct the ballistic survivability/lethality analysis for U.S. Army aviation systems. (1077)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army aviation systems. (636)

threats. Provides field threat environment support for EWVA. Analyzes vulnerabilities of foreign threat weapons and command, control, communications, computers and developers and technical capability information to the intelligence community. Supports Army initiatives in vulnerability reduction of C4I/IEW systems against the full Project D675 - C4/IEW Systems: Supports survivability analysis of Army communications and electronic equipment against the full spectrum of friendly and enemy intelligence (C4I) and Intelligence Electronic Warfare (IEW) systems to U.S. Army EW systems. Provides threat weapon electronic design data to countermeasure spectrum of battlefield threats.

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1996 Planned Program:

- Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army command and control systems. This effort supports Maneuver Control System, Common Hardware and Software, Standard Integrated Command Post Shelter, Advanced Field Artillery Tactical Data System, FAAD-C21, and Combat Service Support Control System. (2204)
 - Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army communications systems such as Mobile Subscriber Equipment, SINCGARS, Global Positioning System, Single Channel Anti-jam Man Portable radio, Secure Mobile Anti-jam Reliable Tactical Terminal, and Enhance Manpack UHF-Terminal. (1674)
- (IEW) systems such as the Battlefield Combat Identification System, enhanced Firefinder radar, and Joint Surveillance Target Attack Radar System/Ground Station Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army intelligence and electronic warfare
- Provide integrated survivability/lethality analyses to support scheduled C4I/IEW systems program decision milestones in FY96. (210)

February 1995

0605604A Survivability/Lethality Analysis

FY 1997 Planned Program:

- Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army command and control systems. This effort supports the Advanced Field Artillery Tactical Data System, Common Hardware and Software, Maneuver Control System, FAAD-C21, Standard Integrated Command Post Shelter, and Combat Service Support Control System. (2130)
 - Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army communications systems such as SINCGARS, Global Positioning System, Mobile Subscriber Equipment, Single Charnel Anti-jam Man Portable radio, Secure Mobile Anti-jam Reliable Tactical Terminal, and Enhance Manpack UHF Terminal. (1730)
- (IEW) systems such as the Battlefield Combat Identification System, Joint Surveillance Target Attack Radar System/Ground Station Module, and enhanced Firefinder Conduct integrated electronic, ballistic, and chemical/biological/nuclear/atmospheric effects survivability analysis for U.S. Army intelligence and electronic warfare
- Provide integrated survivability/lethality analyses to support scheduled CAVIEW systems program decision milestones in FY97. (217)

Project D677 - Ground Combat Systems: Project investigates the survivability and vulnerability of Army ground combat systems to the full spectrum of battlefield threats. Analysis will support weapon requirements, test and evaluation master plans, cost/operational effectiveness analysis, and major decision milestones.

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

396 Planned Program: 7

- Conduct the electronic warfare vulnerability assessment for U.S. Army ground combat systems. This effort supports such systems as Bradley A3, Command and Control Vehicle (C2V), Armored Gun System (AGS), AFAS/FARV, ABRAMS M1A2, Breacher, and Heavy Assault Bridge. (1852)
 - Conduct the ballistic survivability/lethality analysis for U.S. Army ground combat systems. (2517)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army ground combat systems. (1399)
- Provide integrated survivability/lethality analyses to support scheduled ground combat systems program decision milestones in FY96. (242)

FY 1997 Planned Program:

- Conduct the electronic warfare vulnerability assessment for U.S. Army ground combat systems such as AFASFARV, Armored Gun System, Bradley A3, Command and Control Vehicle, ABRAMS M1A2, Breacher, and Heavy Assault Bridge. (1936)
 - Conduct the ballistic survivability/lethality analysis for U.S. Army ground combat systems. (2358)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army ground combat systems. (1439)
- Provide integrated survivability/lethality analyses to support scheduled ground combat systems program decision milestones in FY97. (249)

Project D678 - Munitions Systems: This project funds the investigation of the lethality/vulnerability of Army fire support smart weapons (smart and conventional) to the full spectrum of battlefield threats. The analysis is integrated across all battlefield threats, i.e., conventional ballistic, electronic warfare, directed energy, nuclear weapons effects, and nuclear and chemical/biological contamination effects. This work is accomplished through theoretical and engineering analyses, signature measurements, modeling, simulations, laboratory experiments, and field investigations.

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

FY 1996 Planned Program:

- Conduct the electronic warfare vulnerability assessment for U.S. Army munitions systems such as the Hellfire Longbow Missile, BAT/BAT P31, Wide Area Mine, STAFF, and Javelin. (4263)
 - Conduct the ballistic survivability/lethality analysis for U.S. Army munitions systems. (729)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army munitions systems. (785)
- Provide integrated survivability/lethality analyses to support scheduled munitions systems program decision milestones in FY96. (205)

FY 1997 Planned Program:

- Conduct the electronic warfare vulnerability assessment for U.S. Army munitions systems such as BAT/BAT P31, Hellfire Longbow Missile, STAFF, Wide Area Mine, and Javelin. (4136)
- Conduct the ballistic survivability/lethality analysis for U.S. Army munitions syste.ns. (742)
- Conduct the chemical, biological, nuclear, and atmospheric effects survivability analysis for U.S. Army munitions systems. (799)
- Provide integrated survivability/lethality analyses to support scheduled munitions systems program decision milestones in FY97. (208)

survivability of soldier systems is investigated and reported to milestone decision reviews. Broad areas addressed by SSvA are: Fratricide reduction; soldier detectibility Project D679 - Soldier Systems: This project provides the Soldier Survivability Assessments (SSvA) required for the MANPRINT Soldier Survivability Domain. The maintenance and support of the system being evaluated and how these factors might impact the system's pre-established Manpower, Personnel, and Training goals and constraints. A major thrust of this project is to identify any problems in design characteristics which should be corrected to assure or enhance operational effectiveness. reduction; attack prevention if detected; damage prevention; medical injury reduction; the reduction of mental and physical fatigue as they relate to the operation;

FY 1994 Accomplishments: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996,

FY 1995 Planned Program: Work in this area performed in other projects in this PE. Restructured to this project in FY 1996.

target, from scaled laboratory up through full scale flying target tests. The Mid-Infrared Advanced Chemical Laser (MIRACL) will be terminated in FY96. The Army will lethality laser testing. The HELSTF's laser development support capabilities include a certified laser test range, a fully integrated laser support facility, an extensive array A. Mission Description and Budget Item Justification: Project DE97 DoD High Energy Laser Systems Test Facility (HELSTF): The HELSTF provides a broad based of fully instrumented test sites and the Sea Lite Beam Director (SLBD). This multiple use facility supports testing of laser effects at any power level against any type of Ranges/Facilities in FY96. Test ranges support operations are required for general research and development; therefore, this PE is appropriate for inclusion in Budget high energy laser (HEL) RDTE capability at White Sands Missile Range, NM in support of tri-service HEL research and development and damage, vulnerability, and maintain the HEL system infrastructure. Funding for the remaining mission will be transitioned to the institutional Program Element 0605601, Army Test

FY 1994 Accomplishments:

- Performed required operation and maintenance activities (4471)
- Th. D target tracking tests, explosive testing of Large Blast Thermal Simulator Components, plus other tests involving the MIRACL and the other HELSTF facilities Provided support to HEL Testing to include Navy/United Kingdom (UK) Point Defense Demonstration (PDD), the Air Force Airborne Laser (ABL) Program, Storm

FY 1995 Planned Program:

- Perform required site operations and maintenance activities (3961)
- Provide Support to HEL testing to include follow on to Navy/UK PDD, the Air Force ABL Program plus other smaller experiments (17500)
 - Support Nautilus Program (2500)
 - SBIR/ST (513)

FY 1996 Planned Program:

Provide funding to perform required site operations and maintenance activities to maintain HEL system infrastructure and terminate MIRACL (3000)

A. Mission Description and Budget Item Justification: The objectives of this program are to: (1) provide for the airworthiness qualification of assigned Army aircraft qualification, or airworthiness approval, as appropriate, for assigned aircraft systems, and (3) provide for new vendor qualification and testing for fielded aircraft systems airworthiness qualification of assigned aircraft systems; provide the airworthiness release, interim statement of airworthiness qualification, statement of airworthiness systems and subsystems, IAW AR 70-62; (2) manage and execute the Army's Aeronautical Design Standards Program which establishes the criteria used in the

investigations/assessments and issues messages to the field. Manages/executes the Army's Aeronautical Design Standards (ADS) Program; ADS is a continuously evolving Manages the test and evaluation process to support the airworthiness qualification of developmental and fielded aircraft systems. This project funds activities required for Project D092 - Aircraft Certification: Performs all engineering functions essential for certifying the airworthiness of assigned Army aircraft. Performs safety-of-flight fielded aircraft and materiel changes for all assigned Army aircraft systems. Provides airworthiness engineering support to the Army Aviation Program Executive Office general research and development on support of aircraft certification. The FY95 aircraft certification effort was performed in PE 0605604A Project D089. Since these and the Army Aviation and Troop Command Program/Project/Product Manager requirements for major development/modification and any future system/subsystems. process incorporating revisions for each change to the standard design of an aircraft system. Manages airworthiness approval of new vendor qualification/testing on activities are not allocable to specific R&D missions, this project is appropriately funded in Budget Activity 6.

FY 1994 Accomplishments: Project not funded.

FY 1995 Planned Program: See PE 0605604A, Project D089. Project restructured to PE 0605606A in FY 1996.

FY 1996 Planned Program:

- Manage/execute technical and airworthiness qualification mission for PEO Aviation force modernization aircraft systems (748)
- Continue to ensure safety-of-flight investigations/assessments to include PEO Aviation force modernization aircraft systems (598)
- Manage/execute the Army Aeronautical Design Standards Program (150)
- Provide continuing engineering support for emerging technology upgrades to PEO Aviation force modernization aircraft systems (1032)
 - Continue to provide test management capability for PEO Aviation program/project/product managers (448)

FY 1997 Planned Program:

- Manage/execute technical and airworthiness qualification mission for PEO Aviation force modernization aircraft systems (690)
- Continue to ensure safety-of-flight investigations/assessments to include PEO Aviation force modernization aircraft systems (540)

reports to satisfy Army/DoD RDTE support requirements. Provides technical support to Army Program Executive Officers (PEOs), Project Managers (PMs) and Army test ranges. Develops methodologies and acquires instrumentation/systems that allow meteorological teams to support Army/DoD RDTE requirements. Includes research and A. Mission Description and Budget Item Justification; Provides atmospheric analysis sampling, consultation forecasting, advisory and warning products, and test development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget

weapons and materiel to quantify the effects of the atmosphere on test articles and to assist in the analysis of required modifications to weapons and materiel. Provides Project D127 - Meteorological Support to Army Research Laboratory Activities (ARL): Provides atmospheric information critical in tests of high priority Army automatec surface and upper air meteorological data acquisition systems to support Army RDT&E activities. Effective FY96, this effort is funded in PE 0605604A, Survivabi: ty/Lethality Analysis.

FY 1994 Accomplishments:

- Developed technique to remotely measure turbulence and its effects on Army acoustic systems. (841)
- Developed tech sology to convert real 2-D obscurant cloud scenes into 3-D time varying scenes based on measured atmospheric diffusion parameters, and continued develorment of instrumentation and data reduction techniques. (2189)
- Provided atmospheric transport and diffusion model with variable meteorology to Space Strategic Defense Command and Defense Nuclear Agency, and conduct edatmospheric susceptibility tests of Army smart sensors for Program Managers and RDE Centers. (1016)
 - Defined high speed variability of turbulent effects using the Atmospheric Profiling Rescarch Facility. (1107)
- Applied configuration management procedures in developing, testing, and documenting battlefield weather intelligence software for transition to the Integrated Meteorological System Block 2. (837)
 - Provided atmospheric measurements for Smart Weapons Operations Enhancement (SWOE) field trials, and initiated measurements of atmospheric diffusion coefficients above the Planetary Boundary Layer (2054)
- Validated the color contrast transmission model in support of Army target acquisition program. (724)
- Provided near real-time rocket plume signature characterization with the mobile atmospheric spectrometer system in support of air defense programs. (531)

FY 1995 Planne Program:

- Assess and validate acoustic propagation model for determining atmospheric effects on long range acoustic propagation. (406)
- Complete operational smoke cloud tomography technique, enhance data collection and analysis techniques, and provide field test support. (1110)
- Chara terize diurnal evolution of planetary boundary layer with application to acoustic and electromagnetic propagation and aerosol transport. (586)
- Develop interoperability of battlefield weather intelligence software with Army Tactical Command and Control Systems, Louisiana Maneuvers, and TRADOC Battle Labs. (406)
- Relate measurements of atmospheric diffusion coefficients above the Planetary Boundary Layer to laboratory quality upper atmospheric soundings, for missile intercept studies. (904)
- Complete validation and model acceptance for time variable transport and diffusion model. (496)
- Assess txhniques to exploit spectral and spatial contrast divergence for long range target acquisition. (406)
- Develop a portable high resolution spectroscopic system for characterization of chemical agents, obscurants, and rocket plumes. (135)
 - Small B usiness Innovation Research (SBIR)/Small Business Technology Transfer (STTR) (40)

FY 1996 Planned Program: Project restructured to PE 0605604A, Survivability/Lethality Analysis.

FY 1997 Planned Program: Project restructured to PE 0605604A, Survivability/Lethality Analysis.

D128 Meteorological Support to Test and Evaluation Command (TECOM) Activities: Provides atmospheric analysis sampling, consultation forecasting, advisory and Managers (PMs) and the Army test ranges. Develops methodologies and acquires instrumentation/systems that allow meteorological teams to support Army/DoD RDTE warning products, and test reports to satisfy Army/DoD RDTE support requirements. Provides technical support to Army Program Executive Officers (PEOs), Project requirements.

FY 1994 Accomplishments:

- Provided weather forecasts, severe weather warnings/advisories, staff meteorological services, and atmospheric measurements in support of Army/DoD tests and projects at 12 Army test sites/ranges. (6293)
- Modernized operational equipment to meet customer requirements for meteorological support. (1510)
 - Upgraded selected upper air systems with LORAN-C, in order to improve low level resolution.
- Upgrarled Surface Automated Meteorological System (SAMS) sensors and evaluated improved software systems.
 - Evaluated Mobile Operational Meteorological Support System (MOMSS).
 - Fielda three Small Portable Transmitters.

BUDGET ACTIVITY

6 - Management Support

PE NUMBER AND TITLE 0605702A Meteorological Support to RDT&E Activities

- Provided program management for meteorological support to RDTE and technical review/assistance to range and meteorological teams: (450)
 - Evaluated prototype GPS upper air system for spatial/temporal resolution improvements.
- Evaluated follow-on management systems for analysis and forecast/warning support to test sites and ranges.

FY 1995 Planned Program:

- Provide weather forecasts, severe weather warnings/advisories, staff meteorological services, and atmospheric measurements in support of Army/DoD tests and projects at 12 Army test sites/ranges. (6265)
 - Modernize operational equipment to meet customer requirements for meteorological support. (1125)
 - Upgrade Surface Automated Meteorological Systems (SAMS).
- Field Mobile Operational Meteorological Support (MOMSS) at selected ranges.
 - Test operational GPS upper air system at several ranges.
- Provide program management for meteorological support to RDTE and technical review/assistance to ranges and meteorological teams. (450)
- Evaluate the Joint DoD/National Weather Service Program "Next Generation Doppler Weather Radar" (NEXRAD) remote display system at WSMR, for possible use at several ranges.
 - Evaluate the prototype Automated Weather Information System, of the National Weather Service, as a possible replacement for the current data services from Zepher Corporation system at all ranges
 - SBIR/STTR (50)

FY 1996 Planned Program:

- Provide weather forecasts, severe weather warnings/advisories, staff meteorological services, and atmospheric measurements in support of Army/DoD tests and projects at 12 Army test sites/ranges. (5555)
- Modernize operational equipment to meet customer requirements for meteorological support. (655)
 - Phase III (last) upgrade surface automated meteorological system.
 - Electro optical Instrumentation.
- Sustainment of mobile systems.
- Provide program management for meteorological support to RDTE and technical review/assistance to ranges and meteorological teams. (450)
 - Weather forecast support systems/data.
- Install 3 National Weather Service "Next Generation Doppler Weather Radar" (NEXRAD) principal user processors.

FY 1997 Planned Program:

Provide weather forecasts, severe weather warnings/advisories, staff meteorological services, and atmospheric measurements in support of Army/DoD tests and projects at 11 Army test sites/ranges. (5555)

to address factors pertinent to the decision process such as: technical risk, technical performance, producibility, logistics, etc. AMSAA has a lead role in the planning and Evaluation, and Department of the Army oversight systems, including special access programs. AMSAA provides technical independent evaluations for major milestone decisions, materiel changes, and materiel releases in support of the Army Acquisition Executive (AAE). AMSAA designs technical, developmental, and production tests Program Executive Officer/Project Manager (PEO/PM), and other decision makers of the Army and the Department of Defense. These projects fund efforts in support of A. Mission Description and Budget Item Justification: The U.S. Army Materiel Systems Analysis Activity (AMSAA), as the Army's center for systems analysis and independent evaluation of major systems, provides the technical capability for the conduct of materiel systems analysis. AMSAA evaluates the performance and combat performance assessments (which include performance analyses, risk assessments and Reliability, Availability, and Maintainability assessments) in support of milestone operational effectiveness analyses, force structure studies, risk analyses, trade-off and casualty assessment criteria. AMSAA is the HQDA designated lead agency for operations required for general research and development and, since they are not allocable to specific R&D missions, are appropriately funded in Budget Activity 6. acquisition decisions. AMSAA supports the Army in the development of methodologies, models, simulations, and data bases for use in Army studies and analyses. AMSAA is the Army's technical evaluator of developmental systems, and production tests for all major Defense Acquisition Board, Director Operational Test and execution of the Army live fire tests through its test design, analysis and evaluation responsibilities. As such, AMSAA responds to analyses required by the AAE, effectiveness of existing, developmental and conceptual systems to support Department of the Army and other major Army commands in the conduct of cost and

Project D026 - Test Design and Evaluation: This project provides for developmental, production and product improvement test design and evaluation for Army technical testing in support of major programs. Test design and evaluation is performed independently of the PEO/PM, materiel development command and the testing agencies to milestones to highlight emerging issues which can be resolved to minimize program impacts at milestone reviews. This project funds the salaries of civilian employees complement operational test and evaluation results for the Army acquisition decision process. Regular system assessments are provided to the AAE between major assigned to the test design and evaluation mission.

FY 1994 Accomplishments:

evaluations supported 28 program milestone decision reviews during FY 1994. Examples of evaluations in support of AAE decisions include: PAC 3, Advanced Field Provided test design and evaluation support for 85 systems that are either in development, undergoing major materiel change programs or have been recently fielded. Reduction in systems from prior year can be attributed to selected lower priority/effort ACAT III and IV systems which represent very small cost savings. Systems Enhanced Position Location and Reporting System and Family of Medium Tactical Vehicles. (4101)

Page 1 of 6 Pages

Developed test design and evaluation plans for developmental tests to be conducted in FY 1995 through FY 1999. This effort included test design and evaluation planning for seven systems projected to undergo live fire testing in FY 1995. (2212)

FY 1995 Planned Program:

- Sense and Destroy Armor Munitions; Forward Air Defense Command, Control and Intelligence Ground Based Sensor; Hellfire-Millimeter Wave; Joint Surveillance Provide test design and evaluation support for 76 systems that are either in development, undergoing major materiel change programs, or have been recently fielded. evaluations will support 17 projected program milestone decision reviews during FY 1995. Examples of evaluations in support of AAE decision include: 155-mm Reduction in systems from prior year can be attributed to selected lower priority/effort ACAT III and IV systems which represent very small cost savings. System Target Acquisition System Light Ground Station Module; Joint Tactical Information Distribution System; Joint Unmanned Aerial Vehicle - Short Range; Secure, Mobile, Anti-Jam Reliable Tactical-Terminal, Single Channel, Anti-Jam Manportable, and Wide Area Mine. Evaluate the results of seven live fire tests. (3827)
 - Develop test design and evaluation plans for developmental tests to be conducted FY 1996 FY 2000. This effort includes test design and evaluation planning for systems to undergo live fire testing in FY96-97. (2079)
 - Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR). (121)

FY 1996 Planned Program:

- Provide test design and evaluation support for systems that are either in development, undergoing may. materiel change programs or have been recently fielded. System evaluations will support program milestone decision reviews during FY96. (3537)
- Develop test design and evaluation plans for developmental tests to be conducted in FY97 through FY01. This effort includes test design and evaluation planning for systems projected to undergo live fire testing in FY97-98. (1862)

FY 1997 Planned Program:

- Previde test design and evaluation support for systems that are either in development, undergoing major materiel change programs or have been recently fielded. System evaluations will support program milestone decision reviews during FY97. (2791)
- Develop test design and evaluation plans for developmental tests to be conducted in FY98 through FY02. This effort includes test design and evaluation planning for systems projected to undergo live fire testing in FY 98-99. (1469)

Project MS41 - Materiel Systems Analysis: This project funds the Army Materiel Systems Analysis Activity (AMSAA) primary mission of independent systems analysis and effectiveness evaluations for major materiel systems. AMSAA evaluates the performance and combat effectiveness of existing developmental and conceptual systems develop analytical methodologies to characterize the performance of new technologies associated with weapons, smart munitions, sensors, and command control systems. research and development (R&D) ornters to provide a basis for developing acquisition strategies, concept definitions, operational requirement documents and request for proposals. AMSAA is the HQDA designated lead agency for performance assessments in support of milestone acquisition decisions. This project includes the efforts to At the direction of the Deputy Under Secretary of the Army for Operations Research, AMSAA certifies the performance data provided for major Army studies to provide in support of Headquarters, Department of the Army (HQDA), Army Materiel Command (AMC), Program Executive Officers (PEOs), Project Managers (PMs), and

civilian employees assigned to the materiel system analysis mission.

FY 1994 Accomplishments:

- Unmanned Acrial Vehicle-Close Range, Advanced Field Artillery System, Future Armored Resupply Vehicle, Maneuver Control System, Forward Area Air Defense Developed and certified system performance data for U.S. and foreign systems to support 46 Army Cost and Operational Effectiveness Analyses (COEAs), force structure studies and theater level studies. Included in this was the requirement to support 16 major COEAs. Examples of COEAs supported include: Joint Command, Control and Intelligence and the Combat Service Support Control System. (668)
 - Provided analysis of performance and combat effectiveness of materiel systems and tech base inograms in support of HQDA, AMC, PEOs/PMs and R&D centers. Included are technical risk, trade-off and requirements and analyses. Provided analytical support for 162 systems/programs. (10762)
- Developed methodologies to characterize the performance and combat effectiveness of conceptual, developmental, and fielded systems in a variety of scenarios and conditions for support of force-on-force analyses and war games. Lead development of standards for algorithms portraying physical representation of systems in Distributed Interactive Simulations to support the Training and Doctrine Command (TRADOC) Analysis Center in this HQDA directed effort. (1633)

FY 1995 Planned Program:

- COEAs to be supported include: Joint Unmanned Aerial Vehicle Short Range, Battlefield Combat Identification System Theater High Altitude Area Defense and Develop and certify system performance data for U.S. and foreign systems to support Army COEAs, force structure studies and theater level studies. Examples of ground Based Radar for Thea..r Missile Defense. (608)
- Centers. Included are technical risk, trade-off and requirements analyses. Initial projections identified a potential requirement to provide analytical support for 144 Provide analysis of performance and combat effectiveness of materiel systems and technology base programs in support of HQDA, AMC, PEOs/PMs and R&D systems/programs and 16 Distributed Interactive Simulator projects. (10731)
 - Develop methodologies to characterize the performance and combat effectiveness of conceptual, developmental, and fielded systems in a variety of synarios and conditions for support of force-on-force analyses and war games. (1605)

FY 1996 Planned Program:

- Develop and certify system performance data for U.S. and foreign systems to be used to support Army, COEAs, force structure studies and theater level studies. (585)
 - Provide analyses of performance and combat effectiveness of materiel systems and tech base programs in support of HQDA, AMC, PEOs/PMs and R&D Centers. Included are performance analyses, risk assessments, and reliability, availability, and maintainability assessments for HQDA in support of milestone acquisition decisions. (10335)
 - conditions for support of force-on-force analyses and war games. Will perform a validation and accreditation of algorithms portraying physical representation of Develop methodologies to characterize the performance and combat effectiveness of conceptual, developmental, and fielded systems in a variety of scenarios and systems in distributed Interactive Simulations to support the TRADOC Battle Labs and Study Centers. (1545)

training. These projects fund foreign materiel acquisitions and exploitations in support of the U.S. Army Testing, Training and Intelligence programs required for general systems by analyzing innovations and technology in foreign materiel, and to make research and development more efficient by reducing uncertainties concerning potential force. This program enables the Army to conserve research and development funds and man-hours, enhance and improve U.S. designs, and provide realistic testing and A. Mission Description and Budget Item Justification: This is a continuing project for acquisition and exploitation of foreign materiel to support force and materiel advanced technology threats to U.S. systems. The program also serves to develop countermeasures and to support operational commanders with items for training the development, scientific and technical intelligence needs, operations and training. Primary program objectives are to reduce research and development times for U.S. research and development and, since they are not allocable to specific R&D missions, are appropriately funded in Budget Activity 6.

execution year on the advice of the Army Foreign Materiel Review Board (AFMRB) and with the approval of the Army Deputy Chief of Staff for Intelligence (DCSINT). development of countermeasures to threat materiel and threat technology, and provides materiel for realistic testing and training. Acquisitions and exploitations are development by reducing the uncertainties concerning these threats. The project also answers general scientific and technical intelligence requirements, aids in the executed according to an Army Foreign Materiel Program Five Year Plan, which is updated annually. The Five Year Plan can be amended at any time during the Project DC28 - Acquisition/Exploitation of Threat Items: This is a continuing project for acquisition and exploitation of foreign materiel constituting potential advanced technology threats to U.S. systems. The primary aim of this project is to maximize the efficiency of research and development for force and material

FY 1994 Accomplishments:

- Acquired threat systems identified and prioritized in the FY94 Army Foreign Materiel Program Five Year Plan (2800)
- Initiated, continued, or completed exploitation projects on ground systems of Army interest identified in the FY94 Army Foreign Materiel Exploitation Plan (8442)
 - Initiated, continued, or completed exploitation projects on missile systems of Army interest identified in the FY94 Army Foreign Materiel Exploitation Plan (3252)

FY 1995 Planned Program:

- Acquire threat systems identified and prioritized in the FY95 Army Foreign Materiel Program Five Year Plan. (2000)
- Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY95 Army Foreign Materiel Exploitation Plan. (3856)
 - Initiate, continue, or complete exploitation projects on missile systems of Army interest identified in the FY95 Army Foreign Materiel Exploitation Plan. (1987)
- SBIR/STTR (168)

Exhibit R-2

Page 1 of 5 Pages

February 1995 DATE 0605709A Exploitation Of Foreign Items RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 6 - Management Support **BUDGET ACTIVIT**

FY 1996 Planned Program:

- Acquire threat systems identified and prioritized in the FY96 Army Foreign Materiel Program Five Year Plan. (1000)
- Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY96 Army Foreign Materiel Exploitation Plan. (3000)
- Initiate, continue, or complete exploitation projects on missile systems of Army interest identified in the FY96 Army Foreign Materiel Exploitation Plan. (1376)

FY 1997 Planned Program:

- Acquire threat systems identified and prioritized in the FY97 Army Foreign Materiel Program Five Year Plan. (800)
- Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY97 Army Foreign Materiel Exploitation Plan. (2300)
 - Initiate, continue, or complete exploitation projects on missile systems of Army interest identified in the FY97 Army Foreign Materiel Exploitation Plan. (1051)

FY 1998 Planned Program:

- Acquire threat systems identified and prioritized in the FY98 Army Foreign Materiel Program Five Year Plan. (800)
- Initiate, continue, or complete exploitation projects on ground systems of Army interest identified in the FY98 Army Foreign Materiel Exploitation Plan (2250)
 - Initiate, continue, or complete exploitation projects on missile systems of Army interest identified in the FY98 Army Foreign Materiel Exploitation Plan (1018)

Project D650 - Exploitation/Evaluation of Foreign Items: This project affords the Army's Research and Development (R&D) Community an opportunity to acquire and exploit/evaluate worldwide leading edge technologies. This exploitation/evaluation of foreign technological capabilities is in order to prevent technological surprise, eliminate or compress the R&D time cycle, contribute to R&D cost avoidance, enhance U.S. system and program designs, and to explore Non-Developmental Items.

FY 1994 Accomplishments:

- Continued on-going project evaluations and exploitations identified prior to FY94. (1320)
 - Initiated new start FY94 Acquisitions of 30 projects. (1606)
- Initiated new start FY94 evaluations and exploitations of foreign materiel and/or technologies. (1051)

FY 1995 Planned Program:

- Continue on-going project evaluations and exploitations identified prior to FY95. (1100)
- Plan new start FY95 acquisitions of 30 projects. (1750)
- Plan new start FY95 evaluations and exploitations of foreign materiel and/or technologies. (928)
- SBIR/STTR (78)

FY 1996 Planned Program:

- Continue on-going project evaluations and exploitations identified prior to FY96. (1300)
- Plan new start FY96 acquisitions of 25 projects. (1300)

and measure effects on performance of battlefield obscurants on electro-optical/smart weapon systems. Data is gathered, analyzed, cataloged, and disseminated on support survivability analysis into multiple threat (electronic warfare, ballistics, nuclear effects) analysis process. An annual symposium is conducted to disseminate information on policy and implementation procedures including specific examples on NBC contamination survivability enhancement technique. Field tests are conducted to observe of continued development and improvement of Army systems. This PE supports the direct costs of the joint service project which provides input for U.S. Army Dugway repository of CB information (CB technical source books); and to respond to unified and specified commands and all services for CB information; and are appropriately Proving Ground in developing operational procedures and doctrine to employ currently fielded equipment in a chemical-biological (CB) environment; to maintain the A. Mission Description and Budget Item Justification: This PE develops and implements processes for integrating nuclear, biological, and chemical (NBC) funded in Budget Activity 6. Project DJ30 - Nuclear, Biological, and Chemical (NBC Survivability: This project provides for test and analytical methodology, generic material testing, and database for design and analysis support to numerous weapons systems programs to insure that NBC survivability is readily and adequately addressed during the acquisition cycle.

FY 1994 Accomplishments:

- Assisted Program Executive Officers/Project Managers (PEOs/PMs), Research, Development and Engineering Centers (RDECs), defense decision makers and the Army Battle Labs to meet chemical, biological, and nuclear (CBN) survivability requirements and field sustainable equipment. (2157)
 - Continued development of chemical databases and predictive techniques to determine the effects of agents and decontaminates against materials. (409)
- Expanded the database work, including the Nuclear Survivability Status Tracking System to develop an interface between the CBN databases and Army-wide modeling and simulation programs. (137)
 - Hosted the annual Nuclear, Biological, and Chemical Contamination Survivability symposium. (50)

FY 1995 Planned Program:

Exhibit R-2

Assist PEOs/PMs, RDECs, defense decision makers and the Army Battle Labs to meet CBN survivability requirements and field sustainable equipment. (2721)

the development of new technologies to keep abreast of new weapon advancements. These projects fund operational testing and concept evaluation of materiel in support of D987 provides for development and acquisition of non-major and sustaining instrumentation necessary to attain and maintain the data collection and analysis capability to conduct credible and robust operational tests as demanded by the DoD and Congress. It provides for replacement and improvements of existing obsolete inventory and for sustained operations in a nuclear, biological and chemical environment and developed measures to lessen the effects. Project D001 provides for the direct operational test essential for testing high priority weapon systems, including Joint Service and Multi-Service systems. Project DV02 provides for the recurring costs of operating the test costs incurred by OPTEC. Starting in FY 1995, funding for Acquisition Category (ACAT I) major weapons systems is programmed within the PE funding development activities of the U.S. Army Operational Test and Evaluation Command (OPTEC). Project DV03 measured the degradation of crew and individual performance during potential for warfighting return on investment. Projects typically provide horizontal technology insertion with potential for broad application across the Army. Project for each system. Project D985 enables US Army Training and Doctrine Command (TRADOC) battle labs and schools to evaluate emerging technologies and other A. Mission Description and Budget Item Justification; This program finances the operational testing of developmental material systems. The FY96 increase is equipment to help define Army mission needs and operational requirements. Projects selected for funding are relatively low cost conceptual evaluations, with high the Army and DoD general research and development. Since they are not allocable to specific R&D missions, they are appropriately funded in Budget Activity 6.

Directorate, Fort Bliss, TX; Fire Support Test Directorate, Fort Sill, OK; and the Intelligence and Electronic Warfare Test Directorate, Fort Huachuca, AZ. The following test directorates are located at Fort Hood, TX: Aviation; Close Combat; Engineer/Combat Support; Command, Control, and Communications; and Information Mission subordinate elements of the Test and Experimentation Command (TEXCOM): Airborne and Special Operations Test Directorate, Fort Bragg, NC; Air Defense Test Project DV02 - Test Directorates: This project finances the recurring costs, including civilian pay, support contracts, temporary duty, supplies and equipment of Area. The primary mission of these test directorates is to conduct operational testing of developmental materiel, joint testing, and force development test and

experimentation (FDTE). Between FY 1990 and FY 1994, reduced tests and evaluation manpower by 48%. Further reductions are phased consistent with test scheduling 0605712A Spt Of Operational Testing

and facility availability. Ultimately, OPTEC test directorates will ramp down from 305 civilian spaces in FY 1994 to 208 spaces by the end of FY 1998.

1994 Accomplishments: Z

- Operational Costs for Fort Hood, TX Test Directorates (5614)
- Operational Costs for Fort Sill, OK Test Directorate (2475)
- Operational Costs for Fort Huachuca, AZ Test Directorate (2693)
- Operational Costs for Fort Bragg, NC Test Directorate (3033)
 - Operational Costs for Fort Bliss, TX Test Directorate (3226)

1995 Planned Program: Z

- Operational Costs for Fort Hood, TX Test Directorates (4598)
- Operational Costs for Fort Sill, OK Test Directorates (2174)
- Operational Costs for Fort Huachuca, AZ Test Directorate (2704)
 - Operational Costs for Fort Bragg, NC Test Directorate (2946)
 - Operational Costs for Fort Bliss, TX Test Directorate (2829)
- Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR) (30)

FY 1996 Planned Program:

- Operational Costs for Fort Hood, TX Test Directorates (4291)
 - Operational Costs for Fort Sill, OK Test Directorate (2239)
- Operational Costs for Fort Huachuca, AZ Test Directorate (2785)
 - Operational Costs for Fort Bragg, NC Test Directorate (3034)
 - Operational Costs for Fort Bliss, TX Test Directorate (2914)

1997 Planned Program: 7

- Operational Costs for Fort Hood, TX Test Directorates (3724)
- Operational Costs for Fort Sill, OK Test Directorate (2306)
- Operational Costs for Fort Huachuca, AZ Test Directorate (2868)
 - Operational Costs for Fort Bragg, NC Test Directorate (3125)
 - Operational Costs for Fort Bliss, TX Test Directorate (3001)

Project DV03 - TRADOC P2NBC2: This project measures the physiological and psychological e Tects of a nuclear or chemical environment on individuals and crews of oriented toward understanding the effects and incorporates these measures into revised doctrine, training, organizations, leadership methods or materiel as applicable. systems in sustained combat operations. This unique program, composed of field tests under the concept evaluation program, combined with laboratory research, is 0605712A Spt Of Operational Testing P2NBC2 results support program management, development of major systems, and doctrine and training development objectives. 6 - Management Support

FY 1994 Accomplishments:

- Evaluated capability of processing chemically contaminated patients through treatment system. (239)
- Evaluated the capability of Air Assault troops conducting operations in a chemically contaminated environment. (242)
 - Evaluated capabilities of troops to function dr. ssed in protective chemical gear at high altitudes. (305)
 - Continued development of state of the art temperature measuring system in a non-intrusive marner. (235)
- Developed a set of physiological/psychological predictors of performance of soldiers while wearing protective chemical gear. (232)
 - Provided field with a way to measure stress as reflected by hormones. (126)
 - Incorporated heat strain predictors into the JANUS model. (62)

FY 1995 Planned Program: Project not funded.

FY 1996 Planned Program: Project not funded.

FY 1997 Planned Program: Project not funded.

going and current year Operational Testing and Evaluations. Operational testing is conducted under conditions, as close as possible, to those encountered in actual combat development of each system. Increase in FY 1996 is due to \$9070 required for Multi-Service test for Strategic Sealift Program (SSP). The remaining \$8343 supports on-Project D001 - OPTEC IOTE: This project finances the direct costs of planning and conducting operational testing on major and nonmajor materiel systems, including Joint Service and Multi-Service systems. It funds those costs directly attributable to conducting an early user test and evaluation (EUTE), a limited user test (LUT), or an initial operational test and evaluation (IOTE) on major and nonmajor materiel systems. Operational Test and Evaluation was institutionally funded in this project in FY with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the 1994 and prior years for all Acquisition Categories (ACAT). In FY 1995 and for future years, test funding for ACAT I system is programmed with the PE funding system. OT&E workload and schedules are identified at paragraphs C, Other Program Funding Summary, and D, Schedule Profile.

FY 1994 Accomplishments:

- Complete On-going Operational Testing and Evaluation (10055)
- Conduct Current Year Operational Testing and Evaluation (15104)
- Prepare for Future Year Operational Testing and Evaluation (4847)

Page 3 of 18 Pages

FY 1996 Planned Program:

- Complete On-going Operational Testing and Evaluation (163)
- Conduct Current Year Operational Testing and Evaluation (17250)

FY 1997 Planned Program:

- Complete On-going Operational Testing and Evaluation (3317)
- Conduct Current Year Operational Testing and Evaluation (16486)
- Prepare for Future Year Operational Testing and Evaluation (1790)

Project D985 - Concepts Evaluation of Materiel: The Concepts Evaluation of Materiel Program (CEP) is a key innovative tool which provides TRADOC battle labs and Experiments (AWEs). Program growth reflects increased emphasis on accelerated acquisition methods. Funds are used to acquire, lease or fabricate equipment and to (DTLOMS) needs. TRADOC battle labs build on initiatives with greatest potential payoff. Program is also used as a first look at emerging technologies that have the conduct tests and experiments to determine military utility or potential to satisfy Army Doctrine, Training, Leader Development, Organization, Materiel and Soldiers schools the ability to capitalize on emerging technology and new materiel initiatives. Program provides direct support to battle lab minor Advanced Warfighter potential to support the Army's Force XXI design needs.

- FY 1994 Accomplishments:
- Prototype Decision Support System (301)
- Bradley Fighting Vehicle Platoon Organization (38)
- Thermal and 12 Driver's Viewers (10)
- Compare operational capability of laser aiming device with pulsating beam vs. laser aiming device with steady beam (25)
 - Brigade/Battalion Night Fighting System (300)
 - Personal Communications for the Warrior (47)
- Advanced Communications Technology Satellite (44)
- Radio Access Unit on the Move (67)
- Secure Tactical Data Network-Phase 5/Joint Task Force deployment (69)
 - Bradley Fire Support Vehicle (53)

Project D987 - OPTEC Instrumentation Sustainment & Development: To remain abreast of new weapons and communications systems, the tester requires advanced technology insertion into instrumentation prior to the system tests. This project provides a cost effective data collection, telemetry, and processing capability to conduct credible and robust operational tests as required by the DoD and Congress. It modernizes OPTEC's instrumentation capability and develops non-major instrumentation

(MOEs) can be evaluated with measurable, objective, and responsive attributes as opposed to subjective estimates. It provides an instrumented capability to capture data at intrusive data collection and telemetry systems initiated in FY 1995. This is essential to ensure command and control; and system performance measures of effectiveness that is non-intrusive, more reliable, and provides near real-time access of data for test control and analysis by integrating combat simulators into operational tests and by inserting technology advances into OPTEC instrumentation. It supports Real-Time Casualty Assessment (RTCA) providing realistic simulated attrition of forces. The funding programmed for OPTEC's Operational Test Instrumentation Program (OTIP) starting in FY 1996 continues development of a target identification and RTCA directorates are located at Fort Bliss, Fort Huachuca, and Fort Sill. This funding also completes development of OPTEC's interim RTCA capability that supports the pairing system for dismounted troops and crew-served weapons that is effective in battlefield obscurants: smoke, dust, and fog. It continues the development of nonremote, mobile, tactical field locations, and electronically transmit the data to receiving, control, and evaluation stations at the respective test directorates. These Battlefield Combat Identification System (BCIS), Armored Gun System (AGS), Bradley Fighting Vehicle System (BFVS) and other force-on-force tests.

FY 1994 Accomplishments:

- Acquired instrumentation to support ACAT I, ACAT II-IV, and Joint Service and Multi-Service tests funded in Project D001. (615)
 - Air Defense Artillery (ADA) Data Link Interface
 - Command and Control Vehicle Quick
- Advanced Warfighting Experiment Quick
- Acquired instrumentation to sustain current OPTEC test capability. (371)
 - Video Acquisition and Imaging System
- Low Light Video
 - Control Monitor
- Sustaining Instrumentation

FY 1995 Planned Program:

- Acquire or modify instrumentation to support the OTIP to conduct ACATI, ACAT II-IV, and Joint Service and Multi-Service tests funded in Project D001. (3869)
 - Air Defense Artillery (ADA) Data Link Interface (116)
- Automated Intelligence/Electronic Warfare Test System (AI/EWTS) Upgrades (274)
 - Buffered Airdrop Altitude Transducer (50)
 - Command Audio/Visual Upgrade (190)
 - Commercial Radio Upgrade (35)
 - Digital Camera System (60)
- Digital Imaging Cameras (33)
- Hi-Frequency EW Upgrades (105)
- Operational Test Display System (246)
 - Video Instrumentation (111)

management and administrative functions at Army Research, Development, Test, and Evaluation (RDTE) commands, centers and activities required to accomplish overall Army programs for elimination of ozone depleting chemicals in weapons systems and pollution prevention in the acquisition of weapon systems. Project M881 reflects a assigned general research and development missions not directly related to specific research and development projects. Also provides funding to develop and implement glide path in response to Army infrastructure drawdown initiatives. FY 1995 MAC3 reflects Army initiatives to comply with Public Law and International treaties to hazardous materials on DoD installations. Beginning in FY 1996, Ozone Depleting Chemicals Elimination and Pollution Prevention in Acquisition are funded in PE eliminate ozone depleting chemicals. Project MAC4 (Pcifucion Prevention in Acquisition) is in response to Presidential directions on reducing use and/or release of A. Mission Description and Budget Item Justification: This program funds the continued operation of non-Army Management Headquarters Activities (AMHA) 0603854A. Includes research and development effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

procurement contracts for the U.S. Army Medical Materiel Agency and the Office of the Surgeon General, Army. Requested resources finance salaries and related support Command RDE Center, Ft. Monmouth, NJ; U.S. Army Belvoir RDE Center, Ft. Belvoir, VA; U.S. Army Test and Evaluation Command, Aberdeen Proving Ground, MD; Project M881 RDTE Command/Center/General Administrative Support: Supports the non-AMHA management and administrative functions at the following Army contracting and acquisition management and related administrative functions performed by the Army Medical Research Acquisition Activity (USAMRAA) in support of and four international RDTE Standardization Groups located in Australia, Canada, Germany, and United Kingdom. This project also provides continued operations of the Army Medical Research and Development Command (USAMRDC) RDT&E programs and its tenant organizations at Ft. Detrick, MD, including medical materiel Development and Engineering (RDE) Center, Picatinny Arsenal, NJ; U.S. Army Aviation RDE Center, St. Louis, MO; U.S. Army Research Laboratory, Adelphi, MD; Integration Office, St. Louis, MO; U. S. Army Chemical Biological Defense Command, Aberdeen Proving Ground, MD; U.S. Army Communications-Electronics RDTE commands, centers and activities: U.S. Army Research Institute for the Behavioral and Social Sciences, Alexandria, VA; U.S. Army Armament Research, U.S. Army Missile RDE Center, Redstone Arsenal, AL; U.S. Army Tank-Automotive RDE Center, Warren, MI; U.S. Army Aviation and Troop Command R&D costs for authorized civilian personnel. This program is central to efficient management of the total Army RDTE program.

| BUDGET ACTIVITY | PE NUMBER AND TITLE | |
| 6 - Management Support | 0605801A Programwide Activities | |
| | | |

FY 1994 Accomplishments:

- Provided continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDTE commands, centers and activities. (79640)
- Continued operation of the four Standardization Groups and AMC representative in France. Funded U.S. share of embassy costs (communications, custodial services, utilities and guard service). (3027)
- Funded travel of the Army Science Board. (350)
- Funded quick reaction capability for accident investigations at U.S. Army Aviation and Troop Command and unique costs related to tenant support, (1008)
- Continued to provide acquisition management functions in support of USAMRDC RDT&E programs and its tenant organization, Pt Detrick, MD including medical nateriel procurement of biological defense vaccines. (4875)

FY 1995 Planned Program:

- Provide continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDTE commands, centers and activities. (65987)
 - Continue operation of the four Standardization Groups and AMC representative in France. Funds U.S. share of embassy costs (communications, custodial services, utilities and guard services). (3735)
- Fund travel of the Army Science Board. (350)
- Fund quick reaction capability for accident investigations at U.S. Army Aviation and Troop Command and unique costs related to tenant support. (1039)
- Continue to provide acquisition management functions in support of USAMRDC RDT&E programs and its tenant organizations, Ft Detrick, MD including medical materiel procurement contracts, and procurement of biological defense vaccines. (5062)
 - Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR) (446)

FY 1996 Planned Program:

- Provide continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDTE commands, centers and activities. (54238)
- Continue operation of the four Standardization Groups and AMC representative in France. Funds U.S. share of embassy costs (communications, custodial services, utilities and guard service). (4249)
- Fund travel of the Army Science Board. (287)
- Fund quick reaction capability for accident investigations at U.S. Army Aviation and Troop Command and unique costs related to tenant support. (1010)
- Continue to provide acquisition management functions support of USAMRDC RDT&E programs and its tenant organizations, Ft Detrick, MD including medical materiel procurement contracts, and procurement of biological defense vaccines. (3865)

FY 1997 Planned Program:

- Provide continued operation of management and administrative functions at a level consistent with mission requirements and support needs at Army non-AMHA RDTE commands, centers and activities. (46128)
- Continue operation of the four Standardization Groups and AMC representative in France. Funds U.S. share of embassy costs (communications, custodial services, utilities and guard services). (4156)
 - Fund travel of the Army Science Board. (280)
- Fund quick reaction capability for accident investigations at U.S. Army Aviation and Troop Command and unique costs related to tenant support. (989)
- Continue to provide acquisition management functions in support of USAMRDC RDT&E programs and its tenant organizations, Ft Detrick, MD including medical materiel procurement contracts, and procurement of biological defense vaccines. (3812)

Project MAC3 Ozone Depleting Chemicals (ODC) Elimination: Develop and implement the Army program to eliminate the use of ODC on/for weapon systems. The program has been established due to International Agreements (Montreal Protocol), Title VI of the Clean Air Act of 1990.

FY 1994 Accomplishments:

- Funded test and evaluation on finding Halon 1301 (fire extinguishing agent) replacement for engine compartments of ground combat vehicles. (6458)
- Funded joint Army/Navy/Air Force/Federal Aviation Agency project to find a Halon 1301 replacement (fire extinguishant) for aviation engine nacelles. (1540)
 - Funded alternatives for aviation specific Ozone-Depleting solvents in critical applications. (220)
- Funded ODC program development, management and oversight. (256)

FY 1995 Planned Program:

- Funds required for complete Test and Evaluation for Halon 1301 replacement of ground vehicles. (1000)
- Funds required for joint Army/Navy/Air Force/Federal Aviation Agency project to find a Halon 1301 replacement for aviation engine nacelles. (1125)
- Funds required to continue project alternatives for aviation specific Ozone-Depleting solvents in critical applications and expand to other critical industrial operations.
- Funds required to begin Fire Safety Test Enclosure. (14620)
- Funds required for alternatives to ODC solvents used in ammunition processes and testing of NBC equipment. (473)
- Funds required for program management oversight. (236)
- SBIR/STTR (380)

FY 1996 Planned Program: Realigns environmental compliance resources to PE 0605854A, Pollution Prevention.

A. Mission Description and Budget Item Justification. The goal of this program is to expand worldwide allied standardization and interpretability through cooperative armaments working groups with many nations. This project supports general research and development activities and since it is not allocable to specific R&D missions is new cooperative R&D initiatives and international cooperative agreements, such as memoranda of understanding. This program also includes the United States' share of equipment, etc.) required to participate in international fora, such as the North Atlantic Treaty Organization (NATO) Army Armaments Group (NAAG), and to pursue costs of the NATO Industrial Advisory Group (NIAG) and the Special Fund for Cooperative Planning, partially funds the Four Power Senior National Representatives Army (SNR(A)); the American, British, Canadian, Australian (ABCA) Standardization Program; the Technical Cooperative Program; bilateral staff talks; and Army research and development (R&D) and technology sharing. This program partially funds the travel costs and administrative support (studies, analysis, interpretation, appropriately funded in Budget Activity 6.

Project M798 - International Cooperative Research and Development-Army Research Institute:

FY 1994 Accomplishments:

- Funded domestic and international travel linked to scientific and technological exchanges having military applications and mutual benefit to United States and its **allies** (930)
 - Fund the United States' share of the NIAG and special fund for waperative planning budget (770)

FY 1995 Planned Program:

- Continue to fund domestic and international awel linked to scientific and technological exchanges having military applications and mutual benefit to United States and its allies (748)
- Continue to fund the United States' share of the NIAG and special fund for cooperative planning budget (833)
 - SBIR/STTR (34)

FY 1996 Planned Program:

- Continue to fund domestic and international travel linked to scientific and technological exchanges having military applications and mutual benefit to United States and its allies (756)
- Continue to fund the United States' share of the NIAG and special fund for cooperative planning budget (850)

information derivation, storage, access, display, validation, transmission, distribution, and interpretation. Funding under this program provides for the conduct of analyses, using behavioral science-based analytic tools, to provide policy and decision makers with soldier oriented recommendations concerning manpower, personnel and training scientific, engineering, and technical skills in the DoD and National workforce. It accomplishes this through outreach programs such as Women in Science, Army/Navy review, the Army Science and Technology Master Plan (ASTMP), Science and Technology Objectives (STOs) milestones for the Army's key emerging technologies, and Washington Summer Apprenticeship, and Science and Engineering fairs as an example. This program also provides for upgrading the accuracy, timeliness, availability, Research Office, the Army Research Institute, and the Information Management Office. The projects in this Program Element include management support of Science Coordination of this program with other Services is achieved through interservice working groups. The work in this program element is consistent with rigorous peer issues. This program also provides for science advisors to CINCs and major Army commands and engineering teams to directly solve field Army technical problems. the Army Modernization Plan. These programs are accomplished under the management of the Army Research Laboratory, the Army Materiel Command, the Army cooperative research and development between the Army and Industry. This program directly addresses the need to increase the competitiveness and availability of and accessibility of scientific, technical, and management information at all levels of Army research and development (R&D). This includes initiatives to improve and Technology efforts and therefore are correctly placed in Budget Activity 6.

affecting improved readiness, safety, training, and operations and support (O&S) cost reductions. The Commanding General, AMC institutionalized AMC FAST in 1988 Project DC16 - Field Assistance in Science and Technology (FAST): This program focuses AMC resources to rapidly identify and solve field Army technical problems Laboratory serving Commanders-in-Chief (CINCs) and major Army commanders world-wide and are supported by assigned Quick Reaction Coordinators (QRCs) within each AMC engineering center, Army Research Laboratory, and other Army agencies. Program director reports to Commanding General, AMC. All costs associated with science advisor assignments are funded by AMC subordinate commands who supply the science advisers for two to three year tours. FAST manages a level of effort type to plan for and allocate all AMC-FAST program funding for projects to support CINCs and commanders and to operate the director's office. FAST tours provide major professional growth for scientists and engineers. Science advisers are recruited from Army Materiel Command (AMC) engineering centers and the Army Research project with most projects recouping many times their cost in O&S cost savings.

FY 1994 Accomplishments:

- Provided continuous activity on over 240 PAST projects. Defined, tested and recommended technological solutions to materiel problems identified by CINCs worldwide and prepared operational needs statements and test results for the highest priority (1952)
- Provided professional growth opportunity for 20 science advisers on two year, three year and four year tours and 25 FAST-junior scientists and engineers on two to eight week tours (570)
 - Provided professional growth opportunity for 25 personnel in the Scientists and Engineers Field Experience with Soldiers (SEFEWS) program (50)
- Provided Science Advisor to US Transportation Command to serve on the CINC's Initiatives Team to support future contingency actions and developed a direct relationship between organizations for optimum planning and execution (5)

FY 1995 Planned Program:

- Provide continuous activity on over 250 FAST projects. Define, test and recommend technological solutions to materiel problems identified by CINCs worldwide and prepare operational needs statements and test results for the highest priority programs (2103)
 - Provide professional growth opportunity for 20 science advisers on two year and three year tours and 30 FAST-junior scientists and engineers on two to eight week tours (630)
 - Provide professional growth opportunity for 25 personnel in the SEFEWS program (50)
- Funds will be reprogrammed for SBIR/STTR programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992 (60)

FY 1996 Planned Program:

- Provide continuous activity on over 265 FAST projects. Define, test and recommend technological solutions to materiel problems identified by CINCs worldwide and prepare operational needs statements and test results for the highest priority programs (1675)
 - Provide professional growth opportunity for 20 science advisers on two year and three year tours and 30 FAST-junior scientists and engineers on two to eight week tours (977)
- Provide professional growth opportunity for 55 personnel in the SEFEWS program (126)

- Provide continuous activity on over 280 FAST projects. Define, test and recommend technological solutions to materiel problems identified by CINCs worldwide and prepare operational needs statements and test results for the highest priority programs (1736)
 - Provide professional growth opportunity for 20 science advisers on two year and three year tours and 40 FAST-junior scientists and engineers on two to eight week
- Provide professional growth opportunity for 70 personnel in the SEFEWS program (131)

identifies alternatives and implications, and makes recommendations as appropriate. The major activities of this group include board meetings, special requests, standing Engineering and Technology Systems at the request of the Under Secretary of the Army. The BAST designs, conducts, and supervises the NRC's army-related studies of Project DC18 - Board on Army Science Technology (BAST): The BAST was created in 1982 by the National Research Council (NRC) through its Commission on scientific and technological issues. As such, the BAST defines problems, brings together leading experts to study them, and most importantly, draws conclusions, committees, study committees and workshops and seminars.

1994 Accompaishments: Z

- Provided support for forecast of Army science and technology needs and responded to immediate science and technology requirements (277)
- Provided experts to participate in peer reviews for annual In-House Laboratury Independent Research (ILIR) program, the Research and Development Achievement (RDA) award and Research and Development Organization of the year (RDO) award reviews (70)
 - Provided a study to address space-based communications technology for Command, Control, Communications and Intelligence (C3I) to "win the information war" research status (218)

1995 Planacd Program: 7

- Provide support for forecast of Army science and technology needs and respond to immediate science and technology requirements (358)
 - Provide experts to participate in peer reviews for annual ILIR and RDA awards review (39)
- Provide a study to address space-based communications technology for C31 to "win the information war" research status (266)
- Funds will be reprogrammed for SBIR/STTR in accordance with the Small Business Innovation Research Reauthorization Act of 1992 (15)

FY 1996 Planned Program:

- Provide support for forecast of Army science and technology needs and respond to immediate science and technology requirements (362)
 - Provide experts to participate in peer reviews for annual ILIR and RDA awards review (40)
- Provide a study to address space-based communications technology for C3I to "win the information war" research status (285)

1997 Planned Program: 7

Provide support for forecast of Army science and technology needs and respond to immediate science and technology requirements (377)

Enhancement Act of 1992". These costs are funded here because the Act prohibits use of PB #0605502 for funding administrative costs, studies and analyses to support the Acquisition Corps acquisition and retention of scientists and engineers and improvement of productivity of laboratories and centers. Technology transfer activities make Project M720 - Technical Information Functional Activities: Technology transfer activities support acquisition, storage, and utilization of technical information for community. In addition this line provides funding for all U. S. Army Materiel Command (AMC) subordinate commands and laboratories patent fees and patent legal both military and domestic applications. Activities supported are: Army participation in the Defense Technical Information Center (DTIC) Work Unit Information Innovative Research (SBIR) and Small Business Technology Transfer Pilot Program (STTR) in accordance with the "Small Business Innovation Research Program technical information available to both the public and private sectors to reduce duplication in R&D programs and to increase competitiveness in the U.S. business expenses. The requirement to fund this effort is a result of the Omnibus Budget Reconciliation Act requiring the U. S. Patent and Trademark Office to become a Summary (WUIS) database; Army support for the Federal Laboratory Consortium (FLC); the Army Science Board; administration of the Army's Small Business completely user-fee funded agency.

FY 1994 Accomplishments:

- Continued managerial, programming, data base, clerical and personnel support to process, store, control and report the WUIS, 1498's (362)
 - Provided the Army funding for the annual data collection and printing of the DoD Tri-Service In-House RDT&E Facilities Report (27)
 - Provided Army funding support for FLC as required by Public Law 99-502 (225)
- Provided administrative and contractual support for the Army Science Board (ASB) (300)
 - Provided Army Science and Technology reports/studies (325)

FY 1995 Planned Program:

- Continue managerial, programming, data base, clerical and personnel support to process, store, control and report the WUIS, 1498's (400)
 - Provide the Army funding for the annual data collection and printing of the DoD Tri-Service In-House RDT&E Facilities Report (28)
 - Provide Army funding support for FLC as required by Public Law 99-502 (225)
 - Provide administrative and contractual support for the ASB (310)
 - Provide administrative support for SBIR/STTR programs (500)
 - - Provide Army Science and Technology Reports (130) Provide Army Technology Transfer Brochures (60)
- Funds will be reprogrammed for the SBIR/STTR Programs in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992 (36)

FY 1996 Planned Program:

Continue managerial, programming, data base, clerical and personnel support to process, store, control and report the WUIS, 1498's (400)

execution of the Army Research, Development, Test and Evaluation (RDTE) Appropriation. It includes the hardware, software and contractor support required to develop and implement a set of management decision aids, databases, and hardware/software tools to support technical and budgetary decisions at the Office, Secretary of Defense (OSD), Department of the Army (DA) and Army Materiel Command (AMC) levels. This project includes support of the Acquisition Management Integration Subgroup Project M727 - Technical Information Activities: This project supports development of decision aids, databases, and automation support for the management and (AMIS) dealing with acquisition management systems.

FY 1994 Accomplishments:

- Continued the Science and Technology Data Base computer engineering support contract (1020)
- Continued support to Army S&T strategic planning, analysis, and prioritization (963)
 - Continued support AMC/Joint Directors of Laboratories (JDL) database (212)
- Provided guidance and policy relative to the content, utilization, and requirements of current and future acquisition management systems (413)
 - Supported Tech Integration technical and analytical support contract (25)

FY 1995 Planned Program:

- Continue the Science and Technology Data Base computer engineering support contract (1000)
 - Continue support to Army S&T strategic planning, analysis, and prioritization (900)
 - Continue support to AMC/JDL database (200)

FY 1996 Planned Program:

- Continue the Science and Technology Data Base computer engineering support contract (1100)
 - Continue support to Army S&T strategic planning, analysis, and prioritization (950)
 - Continue support to AMC/IDL database (275)
- Provide guidance and policy relative to the content, utilization, and requirements of current and future acquisition management systems for AMIS (406)

FY 1997 Planned Program:

- Continue the Science and Technology Data Base computer engineering support contract (1106)
 - Continue support to Army S&T strategic planning, analysis, and prioritization (950)
 - Continue support to AMC/IDL database (275)
- Provide guidance and policy relative to the content, utilization, and requirements of current and future acquisition management systems for AMIS (406)

within Army Isboratories in hopes of encouraging more of them to enter scientific fields of study in the future. This program enhances the National Laboratory Science and (SEAP) has been included into the overall effort. This provides an eight week hands-on learning experience for high school students working with bench level scientists science, engineering, and mathematica. These activities are consolidated within this program to "present the Army" to a potential pool of technical talent to fill future Project M729 - Youth Science Activities: Supports science activities to encourage over 100,000 high school youths to develop interest and achieve higher levels in Army needs. No other program fulfills this long-range Army goal. The joint Army/Navy Washington regional area Science & Engineering Apprenticeship Program Engineering Pool that in turn supports Defense industry and laboratory needs.

FY 1994 Accomplishments:

- Engineering Fairs (ISEF), Junior Science and Humanities Symposia (JSHS), Research and Engineering Apprenticeship Program (REAP), Uninitiated Introduction to Continued to foster high school student interest in science, mathematics, engineering and computer science, nationally, through: International Science and Engineering Program (UNITE) and the International Mathematics Olympics (IMO) and increase participation by minorities (1017)
- Continued the Joint Army/Navy Washington Regional Area Science & Engineering Apprenticeship Program and increased Army Laboratory/RDE Center sponsorship of students (254)
- Continued special tutorial programs for Native Americans, African Americans and Spanish-speaking Americans designed to increase their chances of attending and completing engineering and/or science curriculum at the university level (224)

FY 1995 Planned Program:

- 0605803A Technical Info Activities
- Continue to foster high school student interest in science, mathematics, engineering and computer science, nationally, through: SEAP, ISEF, JSHS, REAP, UNITE and the IMO and increase minority participation (1 20)
 - Continue special tutorial programs for Native Amer cans, African Americans and Spanish-speaking Americans designed to increase their chances of attending and Continue the Joint Army/Navy Washington Region I Area Science & Engineering Apprenticeship Program (327) completing engineering and/or science curriculum 't the university level (308)
- Funds will be reprogrammed for the SBIR/STTR P1 grams in accordance with the Small Business Innovation Research Program Reauthorization Act of 1992 (40)

1996 Planned Program: 7

- Continue to foster high school student interest in a ience, mathematics, engineering and computer science, nationally, through: ISEF, ISHS and the IMO and increase minority participation (1272)
- Continue the Joint Army/Navy Washington Region al Area Science & Engineering Apprenticeship Program and increase Army Laboratory/RDE Center sponsorship of students (365)
 - Continue special tutorial programs of UNITE and REAP for Native Americans, African Americans, and Spanish-speaking Americans designed to increase their chances of attending and completing engineering as d/or science curriculum at the university level (340)
 - Begin institutionalized funding of the West Point adet research internship program to enhance cadet training through field experience within Army research laboratories and centers (325)

FY 1997 Planned Program:

- Continue to foster high school student interest in science, mathematics, engineering and computer science, nationally, through: ISEF, ISHS and the IMO and increase minority participation (1319)
- Continue the Joint Army/Navy Washington Regional Area Science & Engineering Apprenticeship Program and increase Army Laboratory/RDE Center sponsorship of
- Continue special tutorial programs of UNITE and REAP for Native Americans, African Americans, and Spanish-speaking Americans designed to increase their chances of attending and completing engineering and/or science curriculum at the university level (360)
- Continue the West Point cadet research internship program to enhance cadet training through field experience within Army research laboratories and centers (330)

Project D730 - Personnel & Training Anaiysis Activities: This project provides for the application of behavioral science-based analytical technologies by the U.S. Army enhance soldier performance and provides the Army a unique capability for addressing such issues as the effects of training on individual and unit readiness, the personnel Research Institute for the Behavioral and Social Sciences (ARI) to current and near-term soldier-related issues. The program is focused on policy issues designated to costs of alternative force structures and the effects of a smaller Army on retention and readiness of quality soldiers. Requirements for studies and analyses for critical personnel and training issues of immediate importance are solicited on an annual basis.

| 6 - Management Support | OROS803A Technical Info Activities | |

Perform analyses on issues that are critical to the development of the Army's comprehensive Combined Arms Training Strategy and battalion level training model (1528)

Investigate information for decisions about leader development programs for current and future leadership requirements (221)

Provide recommendations concerning how the Army Occupational Survey Program could be used in the Military Occupational Specialty (MOS) restructuring process

Determine improvements in predicted performance by improving soldier classification (356)

Project M731 - Government/Industry Data Exchange program (GIDEP) and the Advisory Group on Electronic Devices (AGED): The Government/Industry Data Exchange Program is a joint government/industry effort for the exchange of data to enhance development, design, engineering logistics and cost defense weapon systems equipment. Funds support GIDEP reliability, maintainability and failure experiences interchange data bases. Documents technical design information not commercially unavailable military vital design information. The EDHP benefits the Army by preserving vital design information, providing a focal point for Army and/or Tri-Service available. The Engineering Design Handbook/Information Program (EDHP) was established in 1954 to provide an effective vehicle for documenting commercially coordination of critical design issues, eliminating redundant acquisition actions, providing customized contracting services, and assuring Army standardization.

FY 1994 Accomplishments:

Continued information exchange of data between industry and government and expansion of the program covering Army elements (industry and government) not currently participating (34)

Read Only Memory (CDROM) Military Handbook (MIL-HDBK-767(Mi)), Design Guidance for Interior Noise Reduction in Light Armored Tracked Vehicles. The Completed Engineering Design Handbooks for System Engineers Design for Discard (MIL-HDBK-797(Ae)); Fuzes (MIL-HDBK-798(Ae)); and one Compact Disk CDROM will allow the user to review electronic documentation in a fast, friendly way with little training. Computer and software requirements match the current personal computer configurations (100)

FY 1995 Planned Program:

Continue information exchange of data between industry and government and expansion of the program covering Army elements (industry and government) not currently participating (50)

Complete Engineering Design Handbooks: MIL-HDBK-797(Ae), Polymide (Nylon) Plastics Properties, Processing, Performance, and Military Applications; MIL-HDBK-684, Design of Combat Vehicles for Fire Survivability, MIL-HDBK-1206(EA) Liquid-Filled Projectile Design; MIL-HDBK-1211(MI) Missile Flight Simulation Part 1, Surface to Air Missiles; Fire Control Systems-General; Armor and Its Applications and complete an EDHP Catalog of handbooks (223)

Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Reauthorization Act of 1992 (6)

FY 1996 Planned Program:

Continue information exchange of data between industry and government and expansion of the program covering Army elements (industry and government) not currently participating (50)

Page 9 of 11 Pages

ltem 125

February 1995 DATE 0605803A Technical Info Activities RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 6 - Management Support BUDGET ACTIVITY

Complete Engineering Design Handbooks: Fuze Shock and Vibration Design Handbook, Vol. 1; Rotorcraft and Light Aircraft Qualification; Documentation of Electronic Systems with VHDL; Design for Projection; Rotorcraft and Light Aircraft Qualification (235)

FY 1997 Planned Program:

- Continue information exchange of data between industry and government and expansion of the program covering Army elements (industry and government) not currently participating (50)
- Complete Engineering Design Handbooks: Fuze Shock and Vibration Design Handbook, Vol. II; Electromagnetic Compatibility; and Design of Projectiles for Terminal Ballistic Effects (493)

Project M733 - Acquisition Technology Activities (ATA): This project provides for the engineering of Army acquisition process improvement through the application of decision support and expert information systems. This project provides funds to conduct analysis and evaluation of alternative acquisition strategies using techniques such as Value-Added Analysia. Supports integrated management activities such as Horizontal Technology Integration and Army Ballistic Missile Defense. This project also provides an environment for the analysis and evaluation of new information technologies, concepts and applications in support of the Army acquisition community's dynamic requirements and for the engineering of Army acquisition process improvement through the application of decision support and expert information systems.

FY 1994 Planned Program: Program commences in FY95 in accordance with the planned program starting date.

FY 1995 Planned Program:

- Support, Policy and Program Review, Special Studies, Program Integration, and Congressional Issues Analysis. Initiate programmatic requirements analysis (245) Initiate analysis of acquisition program financial programming and budgeting requirements. Requirements will include Major Program Review Monitoring and
 - Funds will be reprogrammed for SBIR/STTR Programs in accordance with the Small Business Innovation Research Reauthorization Act of 1992 (5)

FY 1996 Planned Program:

- Provide knowledge based design, tool sets, and prototype support of Executive and Expert Information Systems which support the AAC; improve the Information Technology component of a strategic IM process (70)
- Develop a simulation and logical modeling test and evaluation environment that provides a prototype development tool in support of technology based initiatives (90)
 - Provide Knowledge based design, tool sets, and prototype support of Executive and Expert Information Systems which support the AAC; improve the Information Technology component of a strategic IM process (90)
- Analytic/Technical Support for Army Science and Technology Programs, Long-Range Planning and Policy Analysis, Resource Allocation Analysis, Cost Tracking and Analysis, Cost-effectiveness Analysis and Data Base Management/Financial Analysis, SAR Technology Application Concept Research/Analysis. Analyze strategies associated with Horizontal Technology Integration. Assess impact of digitization efforts and value added to force capability of Second Generation Forward Looking Continue analysis of acquisition program financial programming and budgeting requirements. Initiate development of Weapon Systems Handbook, Infrared Seeker (1989)

A. CLIBRICE LYCKIPHOR AND PROPER LICEN JURINGARION: I has program supports a continuing technology investigation. It provides a coordinated 1 in-Service mechanism for the collection and free exchange of technical data on the performance and effectiveness of all non-nuclear munitions and weapon systems in a realistic operational methods for existing conventional ammunition; and safety and hazard evaluation and quantification of DoD munitions via the DoD Explosives Safety Board. The projects (STANAGS) and associated Manuals of Proof and Inspection (MOPI); operation of the North American Regional Test Center (NARTC); evaluation of demilitarization ervironment. It provides for NATO interchangeability testing; joint munitions effectiveness manuals used by all Services; development of standardization agreements in this Program Element support studies and analyses in support of numerous Army and Joint-Services R&D programs and are correctly placed in Budget Activity 6.

munitions and components against mobile ground vehicles and strategic relocatable targets using actual threat vehicles and realistic countermeasures. The project serves Project DC38 - Chicken Little: This project is a joint munitions test and evaluation program executed by the Army and Air Force. It evaluates developmental smart as a center for target signature data collection /exploitation and assists in the test and evaluation of U.S. vehicles countermeasures.

FY 1994 Accomplishments:

- Signature exploitation of rest of world (ROW) targets to support development and intelligence communities.
- Conducted captive flight tests to evaluate target sensing systems and system algorithm improvements of advanced smart weapons.
 - Evaluation of advanced warhead designs against advanced targets.

FY 1995-97 Planned Program: Not Applicable; program terminated.

automated cannon-caliber ammunition and weapons among all NATO countries with all of the associated logistic, strategic, and tactical advantages. Project involves Project DF21 - North Atlantic Treaty Organization (NATO) Small Arms Evaluation: This program assures complete interchangeability of small caliber and development, maintenance, and testing compliance of NATO STANAGS and staffing of the NARTC.

FY 1994 Accomplishments:

- Relocation of the NARTC from Pt. Dix, NJ to the Ballistic Service Office (BSO) at Lake City Army Ammunition Plant (55)
 - Staffed, equipped, and maintained the NARTC (95)
- Completed the STANAG on 40mm ammunition (20)
- Completed a program to replace the NATO 6203 pressure transducer (40)
 - Continued to maintain standardization of previously qualified calibers (70)
 - Completed STANAG for 12.7mm ammunition (25)
- Completed re-draft of 25mm Manual of Proof and Inspection Procedures (16)

FY 1995 Planned Program

- Continue to staff, equip, and maintain the NARTC for 5.56mm and 7.62mm only (50)
 - Complete NATO qualification testing for 5.56mm M856 ammunition (35)
- Continue to maintain standardization of previously qualified calibers, including 25mm (65)
- Establish pressure limits for the newly adopted 6215 pressure transducer for use in testing of previously qualified ammunition designs, including 25mm (72)
 - Continue evaluations of environmentally friendly testing methodology (alternate Mercurous Test Procedure) (92)
 - Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR) decrement (3)

FY 1996 Planned Program:

- Continue to staff, equip, and maintain the NARTC for 9mm, 5.56mm, and 7.62mm only (55)
- Continue to maintain standardization of previously qualified calibers, including 25mm (70)
- Incorporate use of new environmentally safe test method as an alternate to current hazardous procedures (45)
- Implement the use of the 6215 pressure transducer for all NATO standardization testing, including 25mm (116)

FY 1997 Planned Program:

- Continued to staff, equip, and maintain the NARTC for 9mm, 5.56mm, and 7.62mm only (60)
 - Continue to maintain standardization of previously qualified calibers, including 25mm (80)
 - Other activities, including Partners in Peace initiatives (144)

conventional ammunition and conventional ammunition recovered from formerly used defense sites (FUDS). It will complete the development and demonstration of new, safe, and environmentally acceptable alternatives to open burning/open detonation (OB/OD) for recovery/recycle/reclamation equipment and processes to reduce the Project DF24-Conventional Ammunition Demilitarization: This project supports a continuing technology evaluation of demilitarization methods for existing extremely large stockpile of munitions in the resource recovery disposition account and recovered munitions from FUDS. 6 - Management Support

2

- Completed the implementation (at Pine Bluff Arsenal) of a new line for recovery/recycle of the red phosphorous/butyl rubber fill from obsolete L&A1 grenades for reuse in L8A3 grenades. Manufactured 140,552 L8A3 grenades with recovered materials resulting in savings/cost avoidance of \$978K (64)
- Continued the detailed design and pilot testing of a Supercritical Water Oxidation (SCWO) System for the demilitarization of munitions containing carcinogenic/toxic colored smokes and dyes (358)
 - initiated site selection/preparation for prototype SCWO System. (120)
- Complete pilot testing, finalize prototype design and initiate procurement of production prototype SCWO system for demilitarization of smokes and dyes. Continue Continue development of Plasma Arc Furnace technology for demilitarization of small caliber pyrotechnic ordnance (6000) site selection/preparation activities (1462)
 - Complete design modifications and the first stage of production prototype testing of the High Pressure Carbon Dioxide Blastout System for removal of press-loaded explosives (625)
 - Complete design modifications and begin testing of the cryofracture demilitarization prototype facility for small, explosive-loaded items such as grenades and submunitions (770)
 - Initiate development of a pilot ultrasound system to remove energetic material from cast-foaded munitions (110)
 - Safety engineering support for all demilitarization processes (265)
- Initiate development of a prototype rapid analysis system to determine the stabilizer content in Resource Recovery and Disposition Account (RRDA)-recovered propellants (176)
- Initiate development of a prototype system for real-time monitoring of the metals content of effluent gasses generated during various demilitarization operations (337) Complete the design of a pilot process for the reworking of energetic material recovered from the demilitarization of cast-loaded munitions (483)

1995 Planned Program: Z

- Complete the design, specification, fabrication, and installation of a production prototype Plasma Arc Furnace System for demilitarization of small pyrotechnic ordnance and initiate proveout (7366)
 - Continue technical support of equipment procurement and carry out installation and site preparation for production prototype SCWO system for demilitarization of colored smokes and dyes (461)
 - Complete the development and testing of a pilot ultrasound system to remove energetic material from cast-loaded explosives (110)
 - SBIR/STTR decrement (170)

Complete technical support of equipment procurement and complete installation and site preparation for production prototype SCWO system for demilitarization of colored smokes and dyes (380)

Continue prove-out of production pretotype Plasma Are Furnace System for demilitarization of small pyrotechnic ordnance (300)

- Complete production testing and evaluation of fully installed prototype High Pressure Carbon Dioxide Blastout System for removal of press-loaded explosives (147)
 - Complete testing and evaluation of prototype cryofracture facility for demilitarization of explosive-loaded items (820)
- Prepare design specifications for and fabricate, install, and test prototype ultrasound system to remove energetic materials from cast-loaded explosives (589)
 - Complete equipment fabrication, installation, and preliminary hazards ana ysis of a pilot process for the reworking of energetic materials recovered from demilitarization of cast-loaded munitions (880)
- Continue development of prototype system for real-time monitoring of the metals contents of effluent gases generated during various demilitarization operations (554) Continue development of prototype rapid analysis system to determine the stabilize content in RRDA-recovered propellants (387)
 - Initiate development of a prototype process for recycle/reuse of magnesium and aluminum recovered from medium and large caliber projectiles (533)
 - initiate development of a prototype process for recycle/reuse of smokepot oil as boiler/incinerator fuel (475)
 - Initiate development of a prototype process for multi-base propellant recovery (657)

FY 1997 Planned Program:

- Complete testing of and evaluation of production prototype SCWO system for demilitarization of colored smokes and dyes (285)
- Initiate testing and evaluation of pilot process for reworking of energetic materials recovered from demilitarization operations (363)
 - Complete prove-out of production prototype. Plasma Arc Furnace System for demilitarization of small pyrotechnic ordnance (100)

Project D293- Field Artillery Systems (NATO) Engineering Development: This project supports US/NATO howitzer and ammunition Rationalization, Standardization, Interoperability, and Compatibility. This project is an on-going, level of effort program.

FY 1994 Accomplishments:

- Supported engineering efforts (186)
- Supported interoperability testing (77)
- Supported translation and interpretation (18)

FY 1995 Planned Program:

- Engineering support (202)
- Interoperability testing (52)
- Translation and interpretation (20)
- Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR) decrement (6)

FY 1997 Planned Program:

- Continue engineering support (155)
- Continue interoperability testing (101)
- Continue Translation and Interpretation (15)

Project D620- DoD Munitions Effectiveness: Develops Joint Munitions Effectiveness Manuals (JMEM) which provide weapon/munitions effectiveness predictions for operational non-nuclear ordnance employed by the Services. Manages joint Services efforts to improve the analytical methodology and data base used to determine the effectiveness of non-nuclear weapons systems. Promotes standardized procedures for parameters associated with munitions effectiveness. Conducts special studies to determine the effectiveness of non-nuclear munitions systems. Air-to-air, surface-to-surface, and anti-air weapons effectiveness, environmental effects, and target vulnerability for all types of munitions are developed. Project includes collection, collation, storage, and dissemination of combat data.

FY 1994 Accomplishments:

- Development of prototype CD/ROM system for automation of JMEMs (350)
- Methodology improvement programs for hardened targets, aircraft, and crew casualties (975)
- Expansion of Joint Live Fire/Live Fire database and providing weaponeering inputs to Service force studies (375)
- Maintenance and update of a library of over 450 JMEMs and technical reports for the JCS, the Services, and OSD (6339)

1995 Planned Program: Z

- Standardize development of prototype CD/ROM system for the automation of JMEMs (425)
- Develop Methodologies and models for assessment of damage to hardened bunker/aircraft targets and crew casualties (622)
- Develop data for Smart Weapon Analysis Workstation, Special Operations Planning and Requirement System, and the Aircraft Loading and Target Attack Planning System (900)
- Maintain/update a library of IMEMs and reports for the Services/ICS/I/ILC/CINCs/MACOMs/Unified Commands (2913)
 - SBIR/STTR decrement (98)

FY 1996 Planned Program: Army will remain the executive agent for this program, but the funding and oversight transfers to OSD D&E beginning in FY 1996.

FY 1997 Planned Program: No planned Army program

all DoD manufacturing, testing, transportation, maintenance, storage and disposal of ammunition, and explosives operations. Results are essential to the development and improvement of quantity-distance standards, hazard classification procedure, cost effective explosion-resistant facility design procedures, and personnel hazard/protection Project M857- Explosive Safety Standards: Supports explosives effects research and testing to quantify hazards and to develop techniques to mitigate these hazards in

FY 1994 Accomplishments:

- Conducted Hazard Division 1.2 tests with 105mm projectiles in open; designed test structure (magazine) for follow-on tests inside structures, and planned tests for 81mm mortars in open and inside structures (165)
- Developed improved computer codes and conducted workshop to develop rule-based explosives safety and environmental management system (88)
- Conducted other hazard analyses and prepared DoD guidelines for munitions storage facilities (215)

FY 1995 Planned Program:

- Collect and analyze data for revising tri-services and NATO hazzards interpretation of Hazard Division 1.2 ammunition outside and inside structures (210)
- Develop improved tri-service design procedures for explosion-resistant structures (180)
- Develop improved explosives and munitions tests and collect characterization data (60)
- Conduct other hazards analyses and prepare improved DoD guidelines for munitions storage facilities (180)
 - SBIR/STTR decrement (14)

FY 1996 Planned Program

- Collect and analyze data for revising tri-services and NATO hazard interpretations for Hazard Division 1.2, 1.3, 1.4, and 1.6 ammunition outside and inside structures
- Develop improved tri-service design procedures and improved computer codes for explosion-resistant structures (200)
- Conduct weapons hazards analyses; develop improved explosives and munitions tests and collect characterization data; develop DoD guidelines for munitions storage facilities, and expand explosives safety databases (221)

FY 1997 Planned Program:

- Collect and analyze data for revising tri-services and NATO hazard interpretations for Hazard Division 1.2, 1.3, 1.4, and 1.6 ammunition outside and inside structures
- Develop improved tri-service design procedures and improved computer codes for explosion-resistant structures (200)
- Conduct weapon hazards analyses; develop improved explosives and munitions tests and characterization data; develop DoD guidelines for munitions storage facilities, and expand explosives safety databases (215)

replacement item or the finalization of new equipment. The operational testing and evaluation portion (Project DE65) is the conduct of operational testing and evaluation dual-use technology and defense conversion. An NDI is any materiel available from a variety of sources for use in the Army with little or no developmental effort. This development (R&D) process. The market investigation portion (Project D125) is the conduct of surveys and analyses of those commercial items which are either to be a of commercial items identified by the NDI market investigation as satisfying a new requirement or replacement for standard items in the Army inventory. These efforts dollars by recommending these commercially available items, thereby avoiding the cost and time necessary to field a system developed through the normal research and A. Mission Description and Budget Item Justification: Funding of the Army's Non-Developmental Item (NDI) program directly supports the Army's initiatives in program uses materials/items that are available from the commercial marketplace, other governmental agencies, or foreign countries. The NDI program saves RDTE directly support procurement. After FY 1995, candidate NDI programs will be funded under the proper program element in Budget Activity 5. Project D26. - NDI Testing: The operational testing portion conducts evaluation of production items identified by NDI market investigations. These investigations seek to satisfy new requirements or replacements for standard items in the Army inventory when that standard item is no longer available to meet the need and/or significant savings can be realized by precluding an R&D effort. The evaluation typically includes minor engincering modifications and testing of an item to development of performance specifications

FY 1994 Accomplishments:

- Gun Laying and Positioning System (GLPS) Completed testing, evaluation and preparation of test reports on the GLPS. (1209)
- Water Challe. Components Completed testing and evaluation of commercial diesel engines with water chilter. Updated technical data package to incorporate changes in engine, type of refrigerant used (one that will not harm the ozone layer) and associated components. (455)
- incorporated in the FMTV, Palletized Loading System (PLS), and Family of Heavy Tactical Vehicle (FHTV) buys. Examples of these components are: anti-lock Tactical Propulsion System - Completed testing and evaluation of truck components using truck demonstrator II. These truck components will end up being braking system and traction control, suspension arm bushing, and air starter. (1615)
- Combat Propulsion System Started dynamometer testing of (2) medium integrated propulsic a systems a Detroit Diesel engine with an Allison transmission and a Mack engine with General Electric transmission. These powerpacks have potential use in the Advanced Field Artillery System (AFAS), Future Armored Resupply Vehicle (FARV), Bradley and repower of the M109 Self Propelled Howitzer. (1291)

FY 1995 Planned Program

- Humanitarian Airdrop Container (HAC) Identify, test and evaluate most promising HAC for use in low cost, expendable method of airdropping relief supplies for humanitarian operations. (686)
- Helicopter FM Intercom Complete test and evaluate a helicopter FM intercom that allows the crew chief to talk to the pilot/copilot without being connected through an umbilical cord during ground operations. (850)
 - Auxiliary Brake Testing Identify, test, prepare report and system specification on an auxiliary brake device attached to the Abrams Tank that would allow the recovery vehicle to safely tow it without the use of a hold back vehicle. (921)
 - Small Business Innovation Research (SBIR)/Small Business Technology Transfer(STTR) (47)

FY 1996, Manned Program: No Planned Program.

FY 1997 Planned Program: No Planned Program.

Project D125 - NDI Market Investigation: Funding is for the conduct of surveys and analyses of production items (commercial, other military or government) which are to be a replacement item or to meet a new requirement or to replace an item which can no longer be cost-effectively supported in the field.

FY 1994 Accomplishments:

- Construction Equipment Prepared questionnaire, conducted market investigation and prepared technical reports for the 25 ton all terrain cranes and high mobility mobile handler. (420)
 - Tactical Propulsion Sys. 2ms Conducted market investigation of advanced technology components to improve mobility, performance and transportability of heavy tactical vehicles. (286)
- Coastal Harbor and Inland Waterways (CHI) Boat Conducted a complete market investigation and prepared technical data and program management documentation needed for type classification. A CHI boat carries personnel and cargo between anchored shipping and shore facilities. (285)

FY 1995 Planned Program:

- Lower Cost Material, Joining and Design Simplicity of One Time Use Cargo Parachutes Conduct market survey and identify best state-of-the-art design simplicity for one time use cargo parachute. (196)
- Pusher Tug and Crane Barge Program Complete market survey on the Pusher Tug and crane barge to include review of American Bureau of Shipping computer listings. Distribution of industry questionnaires, vessel inspection, evaluation of data and report preparation. (336)
 - High Speed Diesel Engines (HSDEs) for Generators/Auxiliary Power Units (APUs) Conduct market survey and prepare report on HSDE in support of Army's requirements for tactical generators over 5 to 60 KW power range. (166)

defines environmental effort as: Class I - support compliance with legally binding agreements or judgments under applicable Federal, State, local or host nation natural or required to restore, improve or maintain natural or cultural resources; supplies and equipment required to carry out applicable natural and cultural resources management maintenance required for appearance, including landscaping, or normal building maintenance associated with present day, non-cultural uses of historic buildings. Army equivalent; correct deficiencies where a statutory or regulatory deadline has passed; Class II - projects required to comply with an established natural or cultural resource standard, and deadline for compliance is in the future; Class III - project required to maintain/improve natural or cultural resource quality, but where non-compliance is cultural resource environmental laws; correct deficiencies cited in an inspection or notice of violation by a natural or cultural resource regulatory agency, or host nation environmental conservation efforts at RDTE facilities. It focuses on compliance with natural and cultural resource laws and on responsible management of natural and A. Mission Description and Budget Item Justification; This program ensures that resources are available to fund actions specifically required to protect or enhance institual and cultural resources, preserve access to improved and unimproved training areas, and make necessary repairs to minimize erosion and otherwise rehabilitate Integrated Training Area Management; preparation of natural and cultural resource management plans; design, construction, maintenance or repair costs specifically not imminent. Projects MOCC and MICC were realigned from Program Element 0605856A. Project MSCC was realigned from 0605301A. Includes effort directed threatened species, other wildlife, timber, agricultural lands, training areas, etc.) and cultural resources and evaluation of the resources so identified and inventoried; activities. It includes appropriated RDTE funds attributable to fish, wildlife, agricultural outleasing and timber management activities. It does not include normal cultural resources to ensure resources are used wisely and are protected. It finances studies and surveys to identify, inventory, and manage natural (endangered or lands and waters at Army RDTE installations, laboratories and test ranges. No Operation and Maintenance, Army (OMA) appropriation funds are budgeted for loward support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

(APG), MD; Dugway Proving Ground (DPG), UT; and White Sands Missile Range (WSMR), NM. These operations are critical to the infrastructure and execution of the environmental natural and cultural resource management requirements, as discussed in paragraph A, at Yuma Proving Ground (YPG), AZ; Aberdeen Proving Ground Project MOCC - Environmental Conservation - Army Materiel Command (AMC) Test Ranges: Resources in this project ensure an adequate level of funding for Army testing mission. Improper management of natural and cultural resources at these installations could shut down the test mission.

FY 1994 Accomplishments: Project funded under PE 0605856A.

PE NUMBER AND TITLE

PV 1995 Planned Program: Project funded under PE 0605856A.

FY 1996 Planned Program:

Fund Class I, Class II and Class III environmental natural and cultural resource management programs such as Chesapeake Bay and tributary surface water sampling, management/protection of endangered species, historic preservation plans, Land Condition Trend Analysis and wetlands management/studies. (2324)

FY 1997 Planned Program:

Fund Class I, Class II and Class III environmental natural and cultural resource management programs such as Chesapeake Bay shoreline erosion survey, paleobotany management study, management/protection of endangered species, preservation of cultural resources according to the historic preservation plans. (1539) •

Project MICC - Environmental Conservation - Army Materiel Command (AMC) Major Subordinate Commands/Laboratories: Resources in this project ensure an Research, Development and Engineering Center (NRDEC), Natick, MA; and Army Research Laboratory Materials Technology Directorate (ARLMTD), Watertown, MA. adequate level of funding for environmental natural and cultural resource management requirements, as discussed in paragraph A, at Army Research Laboratory (ARL), Adelphi, MD; Armament Research, Development and Engineering Center (ARDEC), Picatinny Arsenal, Dover, NJ; Soldier Systems Command (SSC), formerly, Natick

FY 1994 Accomplishments: Project funded under 0605856A.

FY 1995 Planned Program: Project funded under 0605856A

FY 1996 Planned Program:

Fund Class I, Class II and Class III environmental natural and cultural resource management programs such as survey of critical habitats and species to assess potential existence of threatened/endangered species on installations. (10)

FY 1997 Planned Program:

Fund Class I, Class II and Class III environmental natural and cultural resource management programs such as historical building surveys. (10)

Project MSCC - Environmental Conservation - U.S. Army Kwajalein Atoll: Resources in this project ensure an adequate level of funding for environmental natural and cultural resource management requirements, as discussed in paragraph A, at the U.S. Army Kwajalein Atoll. Funds for this project were realigned from PE 0605301A in FY1996 - FY2001

FY 1994 Accomplishments: Project funded under 0605301A

A. Mission Description and Budget Item Justification. This program ensures that resources are available to fund the non-research portion of the Army's RDTE funded MIPP were realigned from PE #0605856A. M7PP and M8PP were realigned from Program Element 0605801A. Project M5PP was realigned from 0605301A. (This is a alternatives to the use of ozone depleting chemicals in combat vehicle hire protection systems, as cooling agents in Army unique cooling and refrigeration systems, and as environmental pollution prevention program. It finances pollution prevention efforts at Army RDTE installations, laboratories and test ranges; prove-out/engineering of zero sum transfer within Army) Includes effort directed toward support of installations or operations required for general research and development use and therefore is applicable Federal, State, local or host nation environmental laws; correct deficiencies cited in an inspection or notice of violation by a regulatory agency, or host nation Regulations. Pollution prevention is any action that is designed to reduce or eliminate (rather than control or treat) the future impact that an operation may have on the compliance is in the future; Class III - other pollution prevention projects, but where non-compliance is not imminent. Included as Class I and II are projects to comply equivalent; correct deficiencies where a statutory or regulatory deadline has passed; Class II - projects required to comply with an established standard, and deadline for with the Pollution Prevention Act, the Emergency Planning/Community Right-to Know Act, and the other requirements of Executive Order 12856. Projects MOPP and cleaning agents and solvents; and the program to reduce requirements for the procurement of toxic chemicals, including review of standardized documents containing resources, recycling, and/or reduced emissions of toxic and other undesirable materials or wastes to the environment. No Operations and Maintenance, Army (OMA) funds are programmed for these purposes. Army defines environmental effort as: Class I - support compliance with legally binding agreements or judgments under environment (including impacts to the air, surface and ground waters, vegetation and soils) through the source reduction of pollutants, more efficient use of natural these requirements, prove out/engineering of alternative chemicals and processes, revision of standardized documents and revisions of the Federal Acquisition appropriate to Budget Activity 6.

prevention requirements, as discussed in paragraph A, at Yuma Proving Ground (YPG), AZ; Aberdeen Proving Ground (APG), MD; Dugway Proving Ground (DPG), UT; Project MOPP - Pollution Prevention - Army Materiel Command (AMC) Test Ranges: Resources in this project ensure an adequate level of funding for pollution and White Sands Missile Range (WSMR), NM. These operations are critical to the infrastructure and execution of the Army testing mission.

FY 1994 Accomplishments: Program funded in Program Element 0605856A.

FY 1995 Planned Program: Program funded in Program Element 0605856A

FY 1996 Planned Program:

Fund Class I, Class II and Class III pollution prevention projects such as conduct and reporting of Toxic Release Inventories, solid and hazardous waste reduction programs, implementation of storm water pollution prevention plans, purchase of spill response supplies and equipment, etc. (3493)

FY 1997 Planned Program:

Fund Class I, Class II and Class III pollution prevention projects such as reporting of Toxic Release Inventories, solid and hazardous waste reduction programs, implementation of storm water pollution prevention plans, purchase of spill response supplies and equipment, etc. (3215) •

Project MIPP - Poliution Prevention - Army Materiel Command (AMC) Major Subordinate Commands/Laboratories: Resources in this project ensure an adequate Development and Engineering Center (ARDEC), Picatinury Arsenal, Dover, NJ; Soldier Systems Command, formerly, Natick Research, Development and Engineering level of funding for pollution prevention requirements, as discussed in paragraph A, at Army Research Laboratory (ARL), Adelphi, MD; Armament Research, Center (NRDEC), Natick, MA; and Army Research Laboratory Materials Technology Directorate (ARLMTD), APG, MD.

FY 1994 Accomplishments: Program funded in Program Element 0605856A

FY 1995 Planned Program: Program funded in Program Element 0605856A

FY 1996 Planned Program:

Fund Class I, Class II and Class III pollution prevention programs such as natural gas conversion at boiler plants, waste solvent replacement programs, purchase of recycling equipment, implementation of storm water pollution prevention plans, purchase of spill response equipment, etc. (267)

FY 1997 Planned Program:

Project MSPP - Follution Prevention - U.S. Army Kwajalein Atoll: Resources in this project ensure an adequate level of funding for pollution prevention requirements, Fund Class I, Class II and Class III pollution prevention programs such as waste solvent replacement programs, purchase of alternate fuel vehicles, construction of sound-absorbing barriers, implementation of storm water pollution prevention plans, purchase of spill response equipment, etc. (148)

as discussed in paragraph A, at the U.S. Army Kwajalein Atoll.

FY 1994 Accomplishments: Program funded in Program Element 0605301A.

FY 1995 Planned Program: Program funded in Program Element 0605301A.

FY 1996 Planned Program:

- Maintain hazardous material satellite areas to comply with regulations. (100)
- On inue program to replace use of Halon in fire suppression systems. (1580)
- Develop and implement Kwajalein Environmental Emergency Plan (KEEP) as required by UES. (250)
 - Continue identification removal and off-island disposal of PCBs. (1005)

FY 1997 Planned Program:

- Continue implementation of Kwajalein Environmental Emergency Plan (KEEP) as required by UES. (300)
 - Ship recyclable metals from USAKA to a receiving port for resale/reclamation. (400)
 - Continue identification, removal and off-island disposal of PCBs. (743)

Project M7PP - Polartion Prevention - ODC Elimination: Develop and implement the Army program to eliminate the use of ozone depleting chemicals (ODCs) on/for weapon systems. The program has been developed due to International Agreements (Montreal Protocol) Title VI of the Clean Air Act of 1990 and section 326 of P.L. 102-

FY 1994 Accomplishments: Program funded in Program Element 0605801A.

FY 1995 Planned Program: Program funded in Program Element 0605801A.

FY 1996 Planned Program:

- Continue fire safety test enclosure. (1190)
- Complete project on Ozone Depleting solvents for aviation and industrial operations. (105)
- Continue Test & Evaluation of hydrochiorofluorocarbon (HCFC)-22 replacement in air conditioners/environmental control units in communication shelters. (600)
 - Continue Test & Evaluation of HCFC-22 (Class II Ozone-Depleter) in air conditioners/environmental control units in communication shelters. (136)

FY 1997 Planned Program

• Complete fire safety test enclosure. (320)

Mission Description and Budget Item Justification; This program ensures that resources are available to fund legally mandated environmental compliance activities et U.S. Army RDTE installations, laboratories and test ranges. Increase in FY 1995 reflects Army requirements to fund Class I and II environmental compliance on Army KDTE installations. No Operation and Maintenance, Army (OMA) appropriation funds are budgeted for environmental compliance efforts at RDTE facilities. It finances Environmental Restoration Account (DERA) funded environmental restoration. In summary, this program provides for environmental quality control of current defense operations and disposal of hazardous waste incident to defense operations funded by the RDTE appropriation. Army defines environmental effort as: Class I - support projects required to comply with an established standard, and deadline for compliance is in the future; Class III - salaries and training for environmental personnel and abatement; repair and clean up of underground storage tank hazards; management of hazardous waste storage and disposal; permits and licensing fees; environmental inspection or notice of violation by a regulatory agency, or host nation equivalent; correct deficiencies where a statutory or regulatory deadline has passed; Class II projects required to maintain/improve environmental quality, but where non-compliance is not imminent. Includes effort directed toward support of installations or compliance with legally binding agreements or judgments under applicable Federal, State, local or host nation environmental law; correct deficiencies cited in an environmental staff salaries; minor construction, repair and upgrade of facilities to meet environmental standards, including waste treatment and disposal; radon training, plans and studies; and environmental monitoring and audits. Funds cost of complying with Federal Facility Compliance Agreements (FFCA) and other environmental agreements, and correcting notices of violation. It does not finance construction or repairs unrelated to environmental compliance or Defense operations required for general research and development use and therefore is appropriate for Budget Activity 6.

legally mandated environmental compliance requirements, as discussed in paragraph A, at Yuma Proving Ground (YPG), AZ; Aberdeen Proving Ground (APG), MD; Project MOVV - Environmental Compliance - Army Materiel Command (AMC) Test Ranges: Resources in this project ensure an adequate level of funding for Dugway Proving Ground (DPG), UT, and White Sands Missile Range (WSMR), NM. These operations are critical to the infrastructure of the Army testing mission.

FY 1995 Planned Program: Funded under Program Element 0605301A, Project MAC2.

FY 1996 Planned Program:

- Continue contractor environmental compliance oversight program. (700)
- Continue testing of materials to determine hazardous characteristics. (120)
- Continue shipment of hazardous wastes to disposal. (250)
- Continue training of Environmental staff to maintain current knowledge of compliance requirements. (60)
- Continue quarterly testing of potable water to ensure protection of public health and Safe Drinking Water Act compliance. (150)
 - Clean up fuel and oil contamination (remediation). (1000)
- USAKA Environmental Standards (UES) documentation. (811)
 - Provide environmental awareness training. (50)
- Kwajalein Fuel Farm Assessment (RJ/FS). (1000)
- Continue replacement of equipment containing Polychlorinated Biphenyl (PCB). (476)
- Continue identification, removal and off-island disposal of asbestos containing materials. (150)
- Conduct influent water quality and wastewater discharge investigations to establish compliance with UES. (100)

FY 1997 Planned Program:

- Continue contractor environmental compliance oversight program. (1000)
- Continue replacement of equipment containing PCBs. (200)
- Continue testing of materials to determine hazardous characteristics. (120)
- Continue shipment of hazardous wastes to disposal. (250)
- Training of Environmental staff to maintain current knowledge of compliance requirements. (60)
- Quarterly testing of potable water to ensure protection of public health and Safe Drinking Water Act compliance. (150)
 - Periodic testing of wastewater discharges to establish compliance with Clean Water Act requirements. (85)
 - Clean up fuel and oil contamination (remediation). (1000)
- USAKA Environmental Standards (UES) Documentation. (973)
 - Kwajalein Fuel Farm Assessment (RI/FS). (1000)
- Island soil contamination characterization, USAKA islands. (500)

Project M6VV - Environmental Compliance - Landfill Remediation: Congress appropriated funds to facilitate the development of new technologies for more effective and expeditious remediation of landfill sites at military installations.

extension, alteration, conversion, relocation or replacement of an existing real property facility. Includes design costs directly associated with accomplishing a designated for U.S. Army RDTE installations, laboratories and test ranges. Minor construction includes: erection, installation, or assembly of a new real property facility; expansion, A. Mission Description and Budget Item Justification. This program element finances activities and functions necessary to provide facility related minor construction ranges, and minimum support at the AMC major subordinate commands and laboratories and Corps of Engineers RDTE laboratories. Includes effort directed toward recognition of and intent to rectify severe underfunding in FY 1994. FY 1994 funding constraints caused a skip year in TECOM minor construction at the Army test project undertaking. These projects substantially prolong the useful life of the facility and are all actually facility investments. The funding increases reflect Army support of installations or operations required for general research and development use and therefore is appropriate to Budget Activity 6.

TECOM ranges. Facility assets managed include over 3.6 million acres of land, over 23 million square feet of building space, 3 thousand miles of roads, and 2 thousand (AMC) technical test ranges assigned to Test and Evaluation Command (TECOM), i.e., Yuma Proving Ground, AZ; Aberdeen Proving Ground, MD; Dugway Proving Project MOWW - Minor Construction - Test Ranges: Finances RDTE minor construction projects (as described in paragraph A) for U.S. Army Materiel Command Ground, UT; and White Sands Missile Range, NM. In addition, project provides common service host support for over 100 tenants and satellites located on these four miles of utility lines. FY 1994 budget constraints caused a skip year in minor construction at the Army TECOM test ranges. Current funding restores and allows resumption of minor construction support at a minimum level.

FY 1994 Accomplishments: Minor construction projects at U.S. Army Materiel Command test ranges not funded in FY 1994.

FY 1995 Planned Program:

- Fund minor construction projects at Aberdeen Proving Ground, MD. (1523)
- Fund minor construction projects at Dugway Proving Ground, UT. (308)
- Fund minor construction projects at White Sands Missile Range, NM. (691)
- Fund minor construction projects at Yuma Proving Ground, AZ. (319)
- Small Business Innovation Research (SBIR)/Small Business Technology Transfer (STTR) (61)

underfunding in FY 1994. FY 1994 funding constraints caused increased deterioration and delays in critical maintenance and repair projects. This increase will remediate A. Mission Description and Budget Item Justification: This program element finances activities and functions necessary for maintenance and repair of real property at and annual recurring repair incurred by building trade shops, construction units, grounds and pavements units, machine shops and contracts. These projects substantially U.S. Army RDTE installations, laboratories and test ranges. Maintenance and repair of real property includes applicable expenses of cyclic and preventive maintenance some of the worst deterioration of facility assets, especially at the TECOM test ranges. Includes effort directed toward support of installations or operations required for prolong the useful life of the facility, and are all actually facility investments. The current funding increases reflect Army recognition of and intent to rectify severe general research and development use and therefore is appropriate to Budget Activity 6.

miles of roads, and 2 thousand miles of utility lines. Because of funding shortfalls and tenant BRAC growth at test ranges, backlog of maintenance and repair (BMAR) has grown, resulting in deterioration of facility assets. FY 1994 budget constraints caused a drastically reduced Inding level in this program for the TECOM test ranges. The Materiel Command (AMC) technical test ranges assigned to Test and Evaluation Command (TECOM), i.e., Yuma Proving Ground, Arizona; Aberdeen Proving Ground, satellites located on these four TECOM ranges. Facility assets managed include over 3.6 milion acres of land, over 23 million aquare feet of building space, 3 thousand Maryland; Dugway Proving Ground, Utah; and White Sands Missile Range, New Mexico. In addition, provides common service host support for over 100 tenants and Project MOYY - Maintenance and Repair - AMC Test Ranges: Finances functions for maintaining and repairing infrastructure (see paragraph A) for U.S. Army current funding stream will restore funding and allow resumption of maintenance and repair of real property below a minimum level.

FY 1994 Accomplishments:

- Funded maintenance and repair projects at Aberdeen Proving Ground, MD. (25760)
 - Funded maintenance and repair projects at Dugway Proving Ground, UT. (5205)
- Funded maintenance and repair projects at White Sands Missile Range, NM. (11698)
 - Funded maintenance and repair projects at Yuma Proving Ground, AZ. (5397)
- BMAR at \$270 million.

- Funds maintenance and repair projects at Soldier Systems Command, Natick, MA. (2616)
 - BMAR estimate \$18.5 million.
- SBIR/STTR (348)

FY 1996 Planned Program:

- Funds maintenance and repair projects at Picatinny Arrenal, NJ. (10798)
- Funds maintenance and repair projects at Army Research Laboratory, Adelphi, MD. (4612)
 - Funds maintenance and repair projects at Soldier Systems Command, Natick, MA. (2730)
 - BMAR estimate \$20.7 million.

FY 1997 Planed Program:

- Funds maintenance and repair projects at Picatinny Arsenal, NJ. (7979)
- Funds maintenance and repair projects at Army Research Laboratory, Adelphi, MD. (2980)
 - Funds maintenance and repair projects at Soldier Systems Support, Natick, MA. (1700)
 - BMAR estimate \$23.2 million

Vicksburg, MS; Cold Regions Research and Engineering Laboratory (CRREL), Hanover, NH; Construction Engineering Research Laboratory (CERL), Champaign, IL. Project M4YY - Maintenance and Repair - U.S. Army Corps of Engineers (COE): This project finances those maintenance and repair activities and functions necessary for maintaining and repairing infrastructure for the U.S. Army Corps of Engineers RDTE laboratories located at Waterways Experiment Station (WES), and Topographic Engineering Center (TEC), Ft Belvoir, VA.

FY 1994 Accomplishments:

- Funded maintenance and repair projects at CERL, Champaign, IL. (625)
- Funded maintenance and repair projects at CRREL, Hanover, NH. (1280)

civilian personnel and associated administrative support functions outlined above. FY 1996 and beyond funding increase reflects Army recognition of and intent to rectify automation activities; (10) reserve component support; (11) development and administration of morale, welfare and recreation facilities and activities along with quality of administration of unaccompanied personnel housing, (8) command element activities required for commanding all Army units assigned or attached to the installation; (9) and general maintenance activities; (3) operation and maintenance of transportation equipment and local transportation; (4) operation of laundry and dry cleaning plants A. Mission Description and Budget Item Justification; The Base Operations (BASEOPS) program finances those activities and functions necessary for operating and maintaining U.S. Army RDTE installations, laboratories, and test ranges. BASEOPS activities and functions include: (1) operation of post supply functions; (2) direct life initiatives for the military and their families; (12) police and security services and counterintelligence; (13) resource management operations; Defense Finance and Operations to a barely sustainable level of basic operational support. Increases in funding in the follow-on years restore RDTE Base Operations support at a minimum essential level. Includes effort directed toward support of installations or operations required for general research and development use and therefore is appropriate to and contractual services where Army-owned plants are not operated; (5) Army food service program; (6) support to military and civilian personnel; (7) operation and including fire prevention, refuse collection, and custodial services. This is a labor intensive program, providing salaries and related personnel benefits for authorized Accounting Service (DFAS) (14) contracting operations; (15) records management and publications; (16) operation of utilities; and (17) other engineering support severe underfunding in FY 1994 and FY 1995 to include a plus-up for DFAS operations (FY 96 and beyond). FY 1994 funding constraints reduced RDTE Base Budget Activity 6.

ranges assigned to the U.S. Army Test and Evaluation Command (TECOM), i.e., Yuma Proving Ground, AZ; Aberdeen Proving Ground, MD; Dugway Proving Ground, contractors, and military dependents. The Army senior leadership has made a commitment to operate the four major test ranges under the Tri-Service Reliance initiative School; Army Material Systems Analysis Activity; and Army Research Laboratory. This project supports a combined population in excess of 38,000 military, civilians, served by the four TECOM Major Range & Test Facility Bases (MRTFB). Tenants include: U.S. Army Chemical Biological Defense Command, Ordnance Center and UT; and White Sands Missile Range, NM. Provides for the test infrastructure base support along with common service base support to over 100 tenants and satellites Project M0ZZ Base Operations - Army Materiel Command (AMC) Test Ranges: Finances installation management for operating and maintaining technical test ground vehicles and gun munitions at APG/YPG; surface-to-air missiles and nuclear efforts at WSMR; and chemical/biological at DPG). Internal base operations

0605896A Base Operations - RDT&E

operations support requirements are growing in response to reductions elsewhere in the Army. FY 1996 provides for full funding of the Defense Finance and Accounting Consolidation and mission transfers to TECOM R&D installations will result in over 1 million square feet of new tenant facilities and increased population between FY 1994 and FY 1997. Along with these new facilities comes the additional requirements on TECOM R&D installations to provide host services (utilities, engineering services, i.e., refuse; custodial; fire protection; Civilian Personnel Office support; logistics; maintenance, shipping/receiving). Instead of declining, TECOM's base functions and services have been reviewed and resulted in consolidation of functions, curtailment of services, and a reduction of civilians consistent with projected downsizing of workload. Fifty percent of the RDTE base operations budget for the Test and Evaluation Command supports organizations other than testing. Services as an Army cost from the RDTE Appropriation..

FY 1994 Accomplishments:

- Funded BASEOPS activities and functions for TECOM Test Ranges and tenant /satellite activities:
 - Aberdeen Proving Ground Support Activity, MD (89200)
 - Dugway Proving Ground, UT (18997)
- White Sands Missile Range, NM (49005)
- Yuma Proving Ground, AZ (18127)
- Funded specific security projects on TECOM RDTE installations. (627)
- Funded specific security projects at Army Research Laboratory and Chemical Biological Defense Command. (237)
 - Absorbed base operations support for 610th Ordnance Battalion, previously located at Ft Belvoir, VA. (1774)

FY 1995 Planned Program:

- This project funds BASEOPS activities and functions for TECOM Test Ranges and tenant/satellite activities. Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School, as follows:
 - Aberdeen Proving Ground Support Activity, MD (96767)
 - Dugway Proving Ground, UT (18883)
- White Sands Missile Range, NM (50808)
 - Yuma Proving Ground, AZ (18131)
- Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School. Funds Civilian Illness and Injury Compensation costs.
 - Small Business Innovative Research (SBIR)/Science and Technology Transfer (STTR) (195)

FY 1996 Planned Program:

This project funds BASEOPS activities and functions for TECOM Test Ranges and tenant/satellite activities. Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School. Funds Civilian Illness and Injury

Compensation cost:

- Aberdeen Proving Ground Support Activity, MD (108563)
 - Dugway Proving Ground, UT (23371)
- White Sands Missile Range, NM (53296)
 - Yuma Proving Ground, AZ (19860)
- Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School. Above funding includes specific projects below:
 - Civilian Illness and Injury Compensation Costs.
- Defense Finance and Accounting Services
- Funds transfer of Materials Technology Laboratory, Watertown, MA to Aberdeen Proving Ground, MD for partial year.

FY 1997 Planned Program:

- This project funds BASEOPS activities and functions for TECOM Test Ranges and tenant/satellite activities. Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School, as follows:
 - Aberdeen Proving Ground Support Activity, MD (115318)
 - Dugway Proving Ground, UT (18034)
- White Sands Missile Range, NM (53628)
 - Yuma Proving Ground, AZ (21644)
- Base Operations infrastructure continues to provide support for technical testing, diverse Army R&D tenants, and a principal training mission at the Ordnance Center and School. Above funding includes specific projects below:
 - Civilian Illness and Injury Compensation Costs.
 - Defense Finance and Accounting Services.
- Effective FY 97 the main post contonment area of DPG will be closed due to reduction of infrastructure funding in FY 98 and beyond. Dugway Proving Grounds will become a test facility with minimum base operations support.
 - One-time costs for personnel reduction, movernent of equipment, and modular furniture for test facility concept
 - Funds transfer of Materials Technology Laboratory, Watertown, MA to Aberdeen Proving Ground, MD.

Project M122 - Base Operations - AMC Major Subordinate Commands and Laboratories: Finances installation management for operating and maintaining other satellites. FY 1994 funding guidance drastically reduced RDTE Base Operations at the AMC RDTE major subordinate commands and laboratories. FY 1995 funding Laboratories), Armament Research, Development and Engineering Center (ARDEC), Picatinny Arsenal, NJ, and Soldier Systems Command (SSC), formerly, Natick Research, Development and Engineering Center (NRDEC), MA. Provides for the infrastructure base support along with common service base support to tenants and U.S. Army Materiel Command RDTE installations and laboratories, i.e., Army Research Laboratory (ARL), Adelphi, MD (previously known as Harry Diamond restores program to minimum essential level.

February 1995 0605896A Base Operations - RDT&E RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 6 - Management Support

FY 1994 Accomplishments:

- Continued to fund the BASEOPS activities and functions for the AMC RDTE Major Subordinate Command installations, laboratories and tenant/satellite activities as
- ARL, Adelphi, MD (31024)
- ARDEC, Picatinny Arsenal, NJ (36567)
- SSC, Natick, MA (11681)

FY 1995 Planned Program:

- Continues to fund the BASEOPS activities and functions for the AMC RDTE Major Subordinate Command installations, laboratories and tenant/satellite activities. The current program reflects a restoral of minimum essential funding. Funding by installation is as follows:
 - Directorate at Watertown, MA. Watertown facility is scheduled to close 4th Qtr, FY 1995. FY 1995 level funds essential items that were deferred from FY 1994 - ARL, Adelphi, MD (FY 1995 funding level restores ARL BASEOPS to minimum essential level, including minimal "open door" support costs for the Materials because of funding shortage.) (33705)
- ARDEC, Picatinny Arsenal, NJ (The FY 1994 RDTE funding guidance drastically reduced the RDTE BASEOPS program at ARDEC, Picatinny Arsenal, NJ, below the minimum essential level, as a one-time reduction. The FY 1995 funding level partially restores the ARDEC BASEOPS program to cover minimum essential level requirements and efforts deferred from FY 1994 because of funding shortages). (43954)
 - SSC, Natick, MA (12793)
- SBIR/STTR (1685)

FY 1996 Planned Program:

- Continues to fund the BASEOPS activities and functions for the AMC RDTE Major Subordinate Command installations, laboratories and tenant/satellite activities. The FY 1996 program reflects minimum essential funding. Funding by installation as follows:
 - ARL, Adelphi, MD (44605)
- ARDEC, Picatinny Arsenal, NJ (44000)
- SSC, Natick, MA (18449)

FY 1997 Planned Program:

- The FY 1997 program reflects minimum essential funding. As indicated by the outyear profiles, the workforce and infrastructure support will be reduced in line with Continues to fund the BASEOPS activities and functions for the AMC RDTE Major Subordinate Command installations, laboratories and tenant/satellite activities. the Army's downsizing plans. Funding by installation as follows:
 - ARL, Adelphi, MD (28065)
- ARDEC, Picatinny Arsenal, NJ (44000)
- SSC, Natick, MA (15446)

A. Mission Description and Budget Item Justification: This program funds the Research, Development, Test and Evaluation (RDTE) Army Management Headquarters personnel and the associated administrative support (travel, supplies and equipment). Includes research and development effort directed toward support of installations or Activities (AMHA) for the U.S. Army Research Laboratory (ARL), Adelphi, MD, and the U.S. Army Medical Research and Development Command (USAMRDC), Ft Detrick, MD. This program provides for (1) the development of policy and guidance, (2) long-range planning, (3) programming and budgeting, (4) management of resources (manpower and dollars), and (5) review and evaluation of program performance. Provides salaries and related personnel benefits for authorized civilian operations required for general research and development use and therefore is appropriate to Budget Activity 6.

A. Mission Description and Budzet Item Justification. The Advanced Field Artillery Tactical Data System (AFATDS) will broaden and modernize the US Army fire planning. These projects support development of a replacement system for the existing TACFIRE and IFSAS systems and are appropriately funded in budget activity 7. automatically implement detailed commander's guidance in the automation of operational planning, movement control, targeting, target value analysis and fire support cannons, rockets and guided missiles) in the execution of close support, counterfire, interdiction, suppression of enemy air defense and deep operations. AFATDS will service/combined fire support assets to complement the commander's scheme of maneuver. AFATDS will accomplish this by providing fully automated support for support command, control and communications (C3) system. As a battle management system, A: ATDS will provide automated fire support in the Army Tactical planning, coordination and control of all lire support assets (mortars, close air support, naval gunfire, attack helicopters, offensive electronic warfare, field artillery Command and Control System (ATCCS) architecture in support of close, rear and deep operations, fire planning and the coordination and employment of all

automated network. Both hardware and software will be capable of being tailored to perform the fire support command, control and coordination requirements at any level of command. This will permit variable command and control relationships and full fire support functionality at all echelons of field artillery and maneuver, from corps to Project D322 - AFATDS Development: The project is composed of a common suite of hardware (ATCCS Common Hardware/Software (CHS)) employed in varying battery or company in support of all levels of contact. The Marine Corps will also utilize AFATDS. AFATDS will interoperate with Navy and Air Force Command and configurations at different operational facilities (or nodes)) and unique system software interconnected by tactical communications in the form of a software-driven, Control weapon systems as well as the German fire support system (ADLER), the French fire support system (ATLAS) and British fire support system (BATES)

meteorological/survey operations. Version 2 will add additional functions, providing automated capabilities for 73% of the required tasks including fire support sensor planning, weather/terrain analysis, and additional munitions. Completion of the last version will result in automation of the required tasks including full fire support planning, target acquisition support and field artillery mission support. Additionally, the completed software will utilize the Army Common Operating Environment AFATDS software will be developed in multiple versions. Under the concept of software "spiral development", development of any version is not dependent on completion of another version. Version 1 will automate 51% of the required tasks including fire support planning, target nominatio, order of fire, and (ACOE) architecture.

| 7 - Operational System Development | 0203726A Advanced Field Artillery Tactical Data | ical Data |
| | System (AFATDS) | |

FY 1994 Program Accomplishments:

- Continued Version 1 Software Development (26855)
 - Version 2.0 Development (7707)
- Conducted Force Development Test and Experimentation (FDTE) of V1 (4600)
 - ATCCS III Test Support (4000)

FY 1995 Planned Program:

- Prepare for Initial Operational Test and Evaluation (IOTE) (700)
- Complete Version 1 and Support Testing (21100)
 - Continue Version 2.0 (22270)
- Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) (927)

FY 1996 Planned Program:

- Conduct Army Systems Acquisition Review Council (ASARC) (Milestone III) (300)
 - Continue Version 2.0 (27208)
- Start Version 2.1 development (11914)

FY 1997 Planned Program

- Complete Version 2.0 and Support Testing (15089)
- Prepare for Version 2.0 Operational Testing (800)
 - Continue Version 2.1 development (20594)

Project D2ET - Operational Test: The project finances the direct costs of planning and conducting operational testing and evaluation of the Advanced Field Artillery possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and Operational Tests and Evaluations (IOTEs) in FY 95 and FY 97 for Versions 1.0 and 2.0 respectively. Operational Testing is conducted under conditions, as close as Tactical Data System (AFATDS) by the Operational Test and Evaluation Command (OPTEC). AFATDS is an Acquisition Category (ACAT) I system with Initial evaluation of effectiveness and suitability of the system. Project D2ET is restructured from within this PE (0203726A) and is not a new start.

FY 1994 Program: N/A

FY 1995 Planned Program:

Version 1.0 IOTE testing (2049)

| Project D322 - APATDS Development | | | | | |

Project D2ET - AFATDS Operational Test (OT)

Technical: None

Funding: Additional funds (\$2.3M) were added in FY 97 to cover operational testing of Version 2.0.

Funding: Funding increased to cover V2.1 Development in FY 96 (\$7.6M) and FY 97 (\$5.0M).

Schedule: Reschedule of IOTE from July 94 to July 95, ASARC Milestone III from Nov 94 to Nov 95 and other related milestones due to delay in Version 1 software delivery and requirement to change hardware, as identified in the proposed Program Baseline submitted to Department of the Army in July 94.

Schedule: None Technical: None

Improvements include development and integration of the GEN II FLIR technology into vehicle production by FY 98. These projects support development of upgrades to technological advancements and enhances the combat capability of today's force. The PE also provides combat effectiveness enhancements for the Abrams Tank through A. Mission Description and Budget Item Justification: This Program Element (PE) responds to deficiencies highlighted during Desert Storm, continues evolutionary a series of product improvements to the current production vehicles. Additional improvements will provide the Bradley with a digital capability and Second Generation Forward Looking Infrared (GEN II FLIR) capability to enhance operations and allow operation in conjunction with the Abrams Tank. The Armored Gun System current production vehicles and are appropriate to Budget Activity 7.

handle the additional towing capability, and hydraulic assisted brakes were added. The boom has a 35 ton lift capacity, the main winch has a constant pull capability of 70 tons and an additional 3 ton auxiliary which is used to deploy the main winch. The hull is armored for protection against small arms fire, artillery fragments, and antitrack recovery vehicle configured with an A-frame boom, two winches, and a spade. The M88A2 HERCULES IRV has a 1050 HP engine, an improved transmission to tank mines. The vehicle has mounted a .50 caliber machine gun for self-protection. The M88A2 HERCULES IRV is capable of performing recovery, evacuation, and limited repair of the main battle tank. The HERCULES IRV is currently migrating from the Engineering, Manufacturing and Development Phase to Low Rate Initial Project D280 - Recovery Vehicle Improvement Program: The M88A2 HERCULES Improved Recovery Vehicle (IRV) is an armored, full-tracked, diesel-powered Production with a MS III decision scheduled for 4Q%

FY 1994 Accomplishments:

- Award Integrated Logistics Support (ILS) contract modification (3990)
- Award Initial Production Release Technical Data Package (TDP) and Packaging Modification (2184)

0203735A Combat Vehicle Improvement Program

PE NUMBER AND TITLE

- Award Low Rate Initial Production (LRIP) Contracted for TDP efforts (200)
- Testing (526)
- Program Management (511)

FY 1995 Planned Program:

- Definitize Initial Production Release TDP and Packaging Modification (3196)
- Award LRIP Provisioning Spares and Repairs TDP (1259)
- Program Management (100)
- SBIR/STTR (98)

FY 1996 Planned Program:

- Production Qualification Test (Performance)/Initial Operational Test & Evaluation (1981)
- Finalize Logistics Documentation (1004)
- Program Management (100)

incorporates the 120 mm gun system, a hybrid nuclear, biological and chemical (NBC) overpressure system, upgraded armor and suspension/final-drive upgrades. The FY designed with growth potential in mind. The Abrams Block Improvement Program (BIP) provides for timely initiation of evolutionary improvements anticipating threat Information System (IVIS). The M1A2 design is founded upon a core digital electronics architecture that interconnects the vehicle's components via power and data Project D330 - Abrams Improvement: Abrams Main Battle Tank (M1A2) incorporated significant advances in crew protection, firepower and mobility and was changes and capitalizes on technological opportunities. The BIP introduces time-phased product improvement to the production line in groups called "Blocks" to 1985-1993 block improvement (M1A2/Block II) includes Commander's Independent Thermal Viewer (CITV), Position Navigation Unit and the Inter-Vehicular minimize production costs while providing effective configuration control. The FY 1978-1985 block improvements resulted in the MIA1 Abrams Tank which busses. The digital architecture and modular design enables rapid system enhancements without major hardware changes.

directly into the detector chip. FLIR systems incorporating these advances are capable of imagery possessing significantly higher resolution, improving the crew's ability and survivability by extending the engagement envelopment under all weather conditions and by increasing the situational awareness of the tank crew. The GEN II FLIR advances in these areas have demonstrated the ability to build detectors containing many more individual detector elements and to integrate image processing electronics Commander's Independent Thermal Viewer (CITV) to provide the Gunner/ Commander with improved all-weather, day/night surveillance, target acquisition and target to detect, recognize and identify targets at longer ranges when compared to the current FLIR technology. The GEN II FLIR will improve the tanks lethality, fightability The BIP supports two Army Horizontal Technology Initiatives by integrating into the Abrams Tank Second Generation Forward Looking Infra-Red (GEN II engagement sighting systems. The TIS and CITV are based on 1970's technology in the areas of image processing electronics and thermal detector design. Recent FLIR) and electronics improvements which support the Army's Digitization effort. Currently Abrams M1A2 Tank employs a Thermal Imaging System (TIS) and will also reduce fratricide due to mis-identification of targets.

upgrade also provides for future growth without significant changes in vehicle architecture. Growth provisions are required to allow the insertion of technology forecast to electronics with improved processors, increased memory and software partitioning necessary for the M1A2 to operate in the Army's common operating environment. The mature between now and 2003. Software partitioning will allow the insertion of new hardware with minimal change to existing software. These changes are designed to The System Enhancement Package (SEP) was also initiated to support the US Army's Digitization of the Battlefield effort. This effort upgrades the MIA2 be exportable to other Abrams platforms, meet Army requirements for joint interoperability with Combined Arms Command & Control Systems and maximize compatibility/ commonality with other Armored Systems Modernization (ASM) systems.

FY 1994 Accomplishments:

- Complete M1A2 Tank Integration (16172)
- Conduct concept study for SEP (2500)
 - Testing/Other (2808)
- GEN II FLIR (13900), Laser Warning Receiver (1500) & Tank 1080 Concept Studies (2100)

FY 1995 Planned Program:

- Continue concept study for the integration of GEN II FLIR technology into the Abrams Tank and begin EMD Phase (10648)
 - SEP Program Funded under PE 243758 (FY 95 funded under Digitization PE)
 - Engineering Support (781)
 - SBIR/STTR (245)

FY 1996 Planned Program:

- Continue EMD Phase of integration of GEN II FLIR technologies into the Abrams Tank (18123)
 - Continue detailed design/integration of SEP technologies into the Abrams Tank (12617)
 - En gineering Support (1609)
 - Te:ting (6458)

FY 1997 Planned Program:

- Continue EMD Phase of integration of GEN II FLIR technologies into the Abrams Tank (11699)
- Continue detailed design/integration of SEP technologies into the Abrams Tank (3122)
 - Engineering Support (1656)
 - Testing (32225)

Project D332 - M2/M3 Fighting Vehicle Improvement Program: In FY94 and beyond the Bradley M2A3/M3A3 configuration vehicles will be a major upgrade to give the system upgraded electronics, digital command and control compatible with the MIA2 Tank and GEN II FLIR's for enhanced target acquisition. Major improvements

February 1995 DATE

autotracking, diagnostics, embedded training and fire control, second generation focal plane array FLIR's for Gunner and Commander as well as full digital integration of will include a 1553 based database core electronics architecture, digital information displays, software packages for command and control, navigation, communications, 0203735A Combat Vehicle Improvement Program all Desert Storm Improvements. Program after FY94 is funded under Project D371.

FY 1994 Accomplishments:

- Design Engineering (46575)
- Prototype Manufacturing (8055)
- In-House Tasks (6835)

FY 1995 Planned Program: Program Funded under 23735/D371

FY 1996 Planned Program: Program Funded under 23735/D371

FY 1997 Planned Program: Program Funded under 23735/D371

Project D344 - Fire Support Team Vehicle: Operational Systems Development funding provides for material improvements to support conversion of the Bradley Fire Support Vehicle. Fire Support Teams currently equipped with M981's were incompatible with Bradley/Abrams equipped maneuver forces during Operation Desert Storm. This project will integrate a significant portion of the current M981 FIST-V mission equipment into the Bradley Fighting Vehicle System. Mission integration will include North Seeking Gyro, Global Positioning System, Improved Targeting Station Control Display, Ground Vehicular Laser Locator Designator, ANTAS-4B, Lightweight Computer Unit Maneuver Control System, SINCGARS radios, and related command and control hardware. System is a new start.

FY 1994 Accomplishments: Project not funded in FY 1994

FY 1995 Planned Program

- Phase I Design Engineering (15408)
- Phase I Prototype Manufacturing (1467)
 - In House Tasks (1097)
- SBIR/STTR (385)

1996 Planned Program E

- Phase I Design Engineering (19410)
- Phase I Prototype Manufacturing (2014)
 - In House Tasks (1768)

0203735A Combat Vehicle Improvement Program PE NUMBER AND TITLE

FY 1997 Planned Program

- Phase I Design Engineering (13086)
- Phase I Prototype Manufacturing (963)
 - Phase II Design Engineering (2406)
- Phase II Prototype Manufacturing (1944)
 - In House Tasks (2555)

upgraded electronics, digital command and control compatible with the MIA2 Tank and GEN II FLIR's for enhanced target acquisition. Major improvements will include a 1553 based database core electronics architecture, digital information displays, software packages for command and control, navigation, communications, autotracking, Project D371 - Bradley Base Sustainment Program: In FY94 and beyond the Bradley M2.A3/M3.A3 configuration vehicles will be a major upgrade to give the system diagnostics, embedded training and fire control, second generation focal plane array FLIR's for Gunner and Commander as well as full digital integration of all Desert Storm Improvements. Program in FY94 was funded under Project D332.

FY 1994 Accomplishments: Program funded under 23735/D332

FY 1995 Planned Program:

- Design Engineering (52505)
- Prototype Manufacture (12277)
 - In House Tasks (8773)
- SBBR/STTR (1579)

FY 1996 Planned Program:

- Design Engineering (85837)
- Prototype Manufacture (25800)
 - In House Tasks (6221)

1997 Planned Program: 7

- Design Engineering (67286)
- Prototype Manufacture (8075)
 - In House Tasks (16282)

battlefield graphics. These projects involve the development, enhancement, and integration of software functionality that currently exists within the Army's inventory or directly supports the implementation of the Joint Global Command and Control System (GCCS). This support is being accomplished through a selection of the Army's Information System (AWIS) and the USCINCEUR Command and Control System (UCCS), the AGCCS will provide a layered architecture and functional bast of breed application of battlefield resources. MCS provides standardized message sets, acquires commander's critical information requirements, and displays status screens and control systems. Project DC49, STACCS is the foundation for the Army Global Command and Control System (AGCCS), which is the Army component system that ability to analyze courses of action; develop and manage Army Forces supporting joint war plans; and ensure that the Army portions of war plans are feasible. Using software applications to develop a totally integrated component of the GCCS. Project D2HT, MCS Operational Test, will support planned Initial Operational Test & "best of breed" command and control functionality for inclusion in the Joint GCCS. The AGCCS-developed software systems will dramatically improve the Army's STACCS foundation applications and additional software functionality developed under the Army World Wide Military Command and Control System (WWMCCS) Evaluation (IOT&E) of MCS. Project D484, Maneuver Control System (MCS), automates command and control (C2) functions previously performed manually. It provides secure, automated assistance to the Operations Staff (G3/S3) and other key staff to meet the information needs of commanders for quicker decisions and is currently under development and are therefore appropriately included in Budget Activity 7.

Corumand and Control System (STACCS) as the foundation for the Army Global Command and Control System (AGCCS). Using STACCS foundation applications and additional software functionality developed under the Army WWMCCS Information System (AWIS) and the USCINCEUR Command and Control System (UCCS), the command and control functionality. The AGCCS-developed software systems will dramatically improve the Army's ability to analyze courses of action; develop and AGCCS will provide a layered architecture and functional best-of-breed software applications to develop a totally integrated component of the Global Command and Project DC49 - STACCS: This project is the Army component system that directly supports the implementation of the Joint Global Command and Control System manage Army Forces supporting joint war plans; and ensure that the Army portions of war plans are feasible. The Army has identified the Standard Theater Army (GCCS). This support is being accomplished through the Army's Global Command and Control System (AGCCS) which is a selection of the Army's best of breed Control System.

7 - Operational System Development

ivstem Development

0203740A Maneuver Control System (MCS)

PE NUMBER AND TITLE

(CPs). CP s #1 and #2 include conversion of existing products to GCCS and development of the Common Operating Environment (COE). Beginning with CP #3, all odd years will consist of software development, software maintenance, relocation/de-installation of the test facility. The development strategy includes 10 Capability Packages development acquisition. The software integration and development effort will be a 5 year RDT&E incrementally funded completion effort. The base year plus 4 option Management and Data Systems (MMMDS) for a hybrid (Cost-Plus-Award Fee and Firm-Fixed-Price) contract. The procurement is a fully competitive research and Acquisition and Contracting Strategy: A consolidated AGCCS Software Development and Integration Contract was awarded 23 December 1994 to Martin Marietta numbered CPs represent development of prime mission functionality. All even numbered CPs will be for fixes or upgrades to odd numbered CPs if required. After delivery and testing of each new functionality (CPs 3, 5, 7, and 9) it will be determined if system upgrades (CPs 4, 6, 8, and 10) are needed.

Hardware/Software (CHS-II) contract and will include equipment and basic Commercial Off the Shelf (COTS) software packages. The COTS hardware and software will provide Reduced Instruction Set Computer (RISC) based machines with expanded processing, storage, and communications capability as well as office-automation and A common hardware platform will be used within the Army to implement AGCCS/GCCS. This will include products from the Army's Common management software.

AGCCS/GCCS. The initial consolidation of AWIS and STACCS, to form the nucleus of the AGCCS project occurred in July 1994. In October 1995, the Combat Service The AWIS Project Management Office (PMO) is the Army's focal point for the development and implementation of AGCCS. Specifically, the PMO develops Support System (CSSCS) PMO will also consolidate into the AGCCS project. The new project office name which will be effective at the beginning of FY 96 is to be interoperability with GCCS. The PMO acts as the technical agent for the DISC4 in the evaluation of Army Command and Control (C2) projects for integration into policies, plans and programs for the integration of Army Command, Control, and Communications (C3) systems to insure compliance with user requirements and "Project Manager for Strategic and Theater Command and Control".

FY 1994 Program Accomplishments:

- Systems Engineering (3014)
- Prime Mission Software Development STACCS Version 1.2. (9739)

FY 1995 Planned Program:

- Systems Engineering (2064)
- Prime Mission Software Development Capability Package #3 (12773)
- Data Engineering (688)
- Systems Test and Evaluation Capability Package #1 (4127)
- Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) (421)

FY 1996 Planned Program:

- Systems Engineering (1835)
- Prime Mission Software Development Capability package #5 (8157)
- Data Engineering (612)

System (MCS) by the Operational Test and Evaluation Command (OPTEC). MCS is an Acquisition Category (ACAT) I system with Operational Testing and Evaluation close as possible, to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and suitability of the system. Project D2HT is restructured from PE 0605712, Support of Operational Test, and is not a new start. Project D2HT - MCS Operational Test: The project finances the direct costs of planning and conducting operational testing and evaluation of the Maneuver Control in FY 96 via a Limited User Test (LUT), and in FY 97 via an Initial Operational Test and Evaluation (IOT&E). Operational testing is conducted under conditions, as

FY 1994 Program: Program unfunded in FY 1994

FY 1995 Planned Program:

- Analyze data and prepare report on the results of ATCCS III Integrated Interoperability Demo (88)
 - SBIR/STTR (2)

FY 1996 Planned Program:

- MCS V12 LUT (2000)
- MCS V12 LUT evaluation (1000)
- Player unit support of V12 LUT (975)
- MCS V12 IOT&E preparation (1000)

FY 1997 Planned Program: Program unfunded in FY 1997

functional tools in both text and map graphics form. The system also automates the preparation and distribution of operational orders and reports to facilitate the initiation Project D484 - Maneuver Control System (MCS): The project satisfies an urgent need for efficient command and control of tactical operations on the battlefield. MCS up-to-date information for quicker decisions and effective utilization of firepower and maneuver resources. The MCS data base provides decision support information and supports the operational concepts of initiative, agility, depth, synchronization and versatility. MCS provides commanders and staffs, at corps through battalion, accurate, and execution of the commander's decision. Reports received through MCS automatically update the data base ensuring that current tactical information is available

hardware/software (CHS) began in FY 1989 with the initiation of the porting of software as well as the initiation of the integration of CHS into both the Standardized

Integrated Command Post System (SICPS) and the existing Command and Control Unit vehicle.

enables the MCS to capitalize on state of the art ruggedized, commercial equipment and reduce life cycle costs. Commencement of the transition to common

FY 1994 Program Accomplishments:

- Implemented replan of MCS program based on Common ATCCS Support Software (CASS) foundation. (400)
 - Continued MCS V12 software development. (12911)
- Conducted MCS Operational Assessment on Common Hardware Software using MCS V12 prototype. (1000)
- Continued Brigade and Below Command and Control System (B2C2), Operations Order (OPORD) and Terrain Evaluation Module (TEM) development. (1600)

FY 1995 Planned Program:

- Initial preparation for LUT at Pt. Hood, TX. (1080)
- Continue MCS V12 development/integration/prototyping. (14787)
- Release RFP for Block IV software development. (200)
- Integrate B2C2 and TEM applications into MCS V12. (600)
 - SBIR/STTR (328)

FY 1996 Planned Program:

- Begin subsystem engineering, integration and test for the Maneuver functional areas. (1200)
 - Conduct LUT at Ft. Hood, TX (700)
- Continue MCS V12 development and integration effort. (9891)
- MCS Digitization/Horizontal Integration (1390)
- Obtain Army Low Rate Initial Production (LRIP) decision (100)
- Initial preparation for IOT&E (500)
- Award Block IV software development contract (5300)

FY 1997 Planned Program:

- Continue subsystem engineering, integration and test for the Maneuver functional areas. (2500)
 - Continue MCS V12 development/integration and prototyping of MCS V12.1 (19948)
 - Conduct IOT&E (1000)

and integration for the addition of Alternate Laser Code (ALC) to the Apache. The Improved Cargo Helicopter (ICH) program is a new start. This funding will definitize A. Mission Description and Budget Item Justification: The Tractor Check program is classified. The CH-47D Product Improvement will develop a 1050-gallon selfsealing tactical fuel tank for long range deployment. This tank will extend the flight range of the CH-47D. The AH-64 PIP provides the necessary development, testing, a program to extend the life of the CH-47D cargo helicopter. The projects in this Program Element support development efforts for system upgrades and are correctly placed in Budget Activity 7.

Project DB75 - Tractor Check: This is a classified program.

This tank will extend the flight range of the CH-47D. The development and subsequent procurement of the tank will result in more rapid deployment of the CH-47D cargo Project D179 - CH-47 Product Improvement: The CH-47 Product Improvement will develop a 1050-gallon self-scaling tactical fuel tank for long range deployment.

FY 1994 Accomplishments: Project not funded.

FY 1995 Planned Program:

- Develop engineering change proposal for self-deployment system (50)
- Design fuel tank to provide for rapid deployment and extended range (1312)
 - Prototype fuel tank (1391)
 - SBIR/STIR (59)

February 1995 0203744A Acft Mods/Product Improvement Progs RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 7 - Operational System Development BUDGET ACTIVITY

FY 1996 Planned Program:

- Testing of self-deployment system (500)
 - Complete prototype (30)

Finalize design for system (1278)

FY 1997 Planned Program: Project not funded

Project D423 - AH-64 PIP: This program element (PE) provides the necessary development, 'esting and integration for the addition of Alternate Laser Code (ALC) to the Replaceable Units (LRU) will be replaced by the Longbow Hellfire Launcher Electronics (HLE) and the addition of the Longbow Launchers. Other LRUs to be replaced multiplex architecture are also expected. The addition of the ALC will ensure optimum Helifire performance on a modern battlefield with known counter measures and include the Laser Electronics Unit (LEU) of the Target Acquisition Designation Sight (TADS) and Cockpit Display Unit (CDU). Also included are the software modification to the Fire Control Computer (FCC) and software and hardware modifications to the LEU. Other LRU changes are software in nature. Changes in the Apache. Design includes the elimination of the Remote Hellfire Electronics (RHEs) and four (4) pylon Multiplex Remote Terminal Units (MRTUs). Those Line will allow optimal use of the planned Electro-Optic Counter Measures (EOMC) to the Hellfire missile. ALC will also be used on the Longbow aircraft.

FY 1994 Accomplishments:

- Began hardware/software design (1621)
- Development of test plans (410)
 - Design Reviews (950)
- Began hardware procurement (1100)
 - LRU/System tests (300)

FY 1995 Planned Program:

- First prototype (155)
- Aircraft integration and system test (255)
 - Flight testing (591)
- Final data item deliveries (100)
 - SBIR/STTR (24)

FY 1996 Planned Program: Project not funded.

FY 1997 Planned Program: Project not funded.

| Project D430 - Improved Cargo Helicopter: This is a new start to develop a program to extend the life of the CH-47D cargo helicopter. This funding will assure a medium lift capability into the 21st century. The CH-47D modernization program began in FY 81 with the modernization of nine aircraft. Delivery of these aircraft began in March 1982. These modified aircraft have now been in use for 13 years with a total of 33 years on the airframe itself. The intent is to study the feasibility of service life extension and correct known deficiencies. This program will study the necessary effort required to sustain the medium lift capability, decrease operation and support costs as the fleet ages, improve engine power, and incorporate new electronics as older systems become obsolete. This program will be the basis for establishing an overhaul, modernization, upgrade or retrofit program to meet the readiness needs of the future for medium lift capability. | elop a program i program bega is with a total (coessary effort as older system if the future for | n in FY 81 win of 33 years on trequired to sus become obscured to medium lift a | life of the CH4 th the moderniz the airframe its tain the mediu stell. A. Mission Description and Budget Item Justification: Aircraft Engine Component Improvement Program (CIP) develops, tests, and qualifies improvements to aircraft components to correct service revealed deficiencies, improve safety, enhance readiness, and reduce Operating and Support (O&S) costs. The tasks in this project support development of upgrades to current production vehicles and are appropriately funded in budget activity 7.

Project D106 - Aircraft Component Improvement Program (CIP): The Aircraft Engine Component Improvement Program (CIP) corrects service revealed problems. CIP investigates, analyzes, develops, tests, and qualifies engine components to improve readiness. In addition, CIP includes redesign, test, and requalification of engine components identified as part of the Army's new flight safety parts service life surveillance program. CIP included in the RDT&E vice procurement appropriations in accordance with Congressional direction.

FY 1994 Accomplishments:

- Control Unit (DECU) improvements to enhance electromagnetic Interference (EMI) capability and operability. Redesigned and tested a more contamination resistant 7700 Engine: Continued update of life limits on engine components utilizing improved analytical and modeling techniques. Completed design of Digital Electronic hydromechanical unit to preclude high and low side engine failures. Performed altitude testing of a lowered start fuel/flow fuel control to evaluate impact on engine starting with below minimum required torque. (2937)
- fatigue life. Began design/development of machined combustor liner for improved durability. Designed cast 4th nozzle to improve durability and survivability and to T55 Engine: Continued design/development of inlet housing in cemposite materials. Began bearing improvement program to reduce cost and improve reliability and reduce O&S costs. Began pinned first turbine blade program to preclude turbine blades from shifting into turbine nozzle and resultant catastrophic failure. Began number 1 seal redesign to reduce accessory gearbox pressure and reduce cost. (1872)
 - T53 Engine: Redesigned accessory gear section to preclude failures resulting in uncommanded engine shutdowns. Redesigned exhaust diffuser to eliminate cracking and extend service life while reducing O&S costs. Designed and improved cooling for stage 1 nozzle to extend engine service life. (352)
 - GTCP36 Auxiliary Power Unit (APU): Redesigned clutch assembly on GTCP36-55 to preclude failures and fire/destruction of AH-64 Apache aircraft. (1300)

FY 1995 Planned Program:

Blackhawk DECU improvements to enhance electromagnetic Interference (EMI) capability and operability. Initiate program to develop and qualify an advanced fuel boost pump that is much less susceptible to air ingestion and therefore reduce engine flameouts. Complete program to reduce stiction in the torquemeter design by TYW Engine: Continue update of life limits on engine components utilizing improved analytical and modeling techniques. Complete qualification testing of the utilizing better sealing of the power turbine shaft and reducing the reference shaft stiffness. (1366)

| BUDGET ACTIVITY | PE NUMBER AND TITLE | PROJECT |
| 7 - Operational System Development | 0203752A Aircraft Engine Component | |
| | Improvement Program | |
| 3.E | | |

- T55 Engine: Continue bearing improvement program to reduce cost and improve reliability and fatigue life. Continue machined combustor liner program to improve durability and survivaiblity and reduce O&S costs. Continue pinned first turbine blade program to prevent catastrophic failure. (1112)
 - GTCP36 APU: Design an erosion resistant turbine wheel for BLACKHAWK APUs. Design a feature to preclude erroneous chiplight warnings. Design improved planetary gears to preclude gear failures, improve reliability and durability of BLACKHAWK APUs. (303)
 - TS3 Engine Funds to develop a full authority digital electronic control (FADEC) for the TS3 engine as directed by Congress. (4500)
 - SBIR/STTR (154)

FY 1996 Planned Program:

- Apache and Super Cobra DECU improvements to enhance electromagnetic Interference (EMI) capability and operability. Complete design and perform qualification testing of an advanced fuel boost pump that is much less susceptible to air ingestion and therefore reduce engine flameouts. Continue program to update the mission profiles used in life analysis by gathering field data. Redesign and test a new IPS blower shaft with improved torsional resilience to impact torque to preclude shaft 1700 Engine: Continue update of life limits on engine components utilizing improved analytical and modeling techniques. Complete qualification testing of the (1506) failures.
- improve durability and survivability and reduce O&S costs. Conclude pinned first turbine blade program to prevent catastrophic engine failure from blades shifting TSS Engine: Continue bearing improvement program to reduce cost and improve reliability and fatigue life. Conclude machined combustion liner program to forward. Continue development of improved compressor impeller to improve efficiency and reduce cost. (1158)
 - GTCP36 APU: Qualify improved durability/reliability design planetary gears for the GTCP36-150 APU for the UH-60 Black Hawk. (348)

FY 1997 Planned Program:

- T700 Engine: Continue update of life limits on engine components utilizing improved analytical and modeling techniques. Continue program to update the mission performance retention. Redesign the gas generator accelerator to reduce gas generator components cooling air thereby resulting in improved component life and profiles used in life analysis by gathering field data. Improve the A-sump pressurization to eliminate oil leakage and maintain cleanliness of compressor and reduced costs. (1513)
- improve efficiency and reduce cost. Develop fireproof fuel and oil lines to bring them up to current safety standards. Rudesign turbine components to eliminate the T55 Engine: Conclude bearing improvement program to reduce cost and improve reliability and fatigue life. Conclude improved compressor impeller program to need for rare and obsolete alloy. (1163)
- GTCP36 APU: Design a ceramic turbine nozzle for all GTCP36 APUs to reduce sand erosion the major cause for APU removal during Desert Shield/Storm; improve readiness/durability while reducing O&S cost for the UH-60 Black Hawk and AH-64 Apacite. (349)

control vehicles) with common technology through either new acquisitions, Pre-Planned Product Improvements (P3I), or system-component upgrades. The application of as units or task forces providing exponential improvement to the force. Battlefield digitization allows the Army's primary weapons systems and others to see, acquire and engage threats while sharing the same information with equal clarity, using advanced technologies and digital communications. To prove out concepts and requirements, A. Mission Description and Budget Item Justification. This program element integrates dissimilar weapons systems (tanks, armored vehicles, aircraft, command and common technologies across multiple systems through an integrated and seamless battlefield architecture improves the capabilities of weapon systems that fight together FY 1997 and division in FY 1998. The Army Digitization Office focuses, coordinates and implements all Army digitization efforts. This project is in Budget Activity 7 near-term efforts will focus on developing a seamless battlefield architecture and appliqué system to support live experimentation and fielding of a maneuver brigade in since it supports experimentation with and modification of equipment in the Army inventory.

FY 1994 Accomplishments:

- Conducted Advanced Warfighter Demonstration (AWD) at National Training Center (NTC 94-7) (8000)
- Conducted Army Tactical Command and Control System (ATCCS) Operation Test (OT). (8400)
- Studies and analyses to develop Army's Digitization Plan (3290)

FY 1995 Planned Program:

- Develop appliqués and integrate on platforms. (23562)
- Develop Brigade and Below Command and Control software. (13627)
- Develop an upgrade to the MIA2 command and control system. (16000)
 - Support start-up of Digitization Integration Laboratory (2000)
- Support development of digitization systems architecture (2000)
 - Conduct simulation, experimentation and testing. (11295)
- Develop a data distribution system. (4505)
- Procure avioraics equipment for Brigade Exercise (8000)
- Small Business Innovative Research (SBIR)/Small Business Technology Transfer Program (STTR) (1738)

FY 1996 Planned Program

- Develop appliqués and integrate on platforms (41767)
- Continue development of Brigade and Below Command and Control software (15000)

| Change Summary Explanation: Funding: FY 96 and FY 97 program funds were realigned from Other Procurement Army (OPA) Activity 2 to RDTE,A. The purpose of the funds planned for procurement is to provide prototype systems hardware and software for utilization in planned large scale brigade and division size experiments. These prototypes are development models, and as such should be financed in the research, development, test and evaluation appropriation instead of the other procurement appropriation. Accordingly, the Army has realigned the funds from OPA to RDTE,A (no net increase to program funding). | om Other Procure oftware for utilizat he research, devel ds from OPA to R | ement Army (C tion in planned opment, test at DTE,A (no ne |)PA) Activi large scale indevaluation | ty 2 to RDT brigade and n appropriat program fu | E,A. 97 budget funds critical improvements to major acquisition programs of PATRIOT and STINGER. The projects support development of upgrades to current equipment and ADA must continually be upgraded and modernized in accordance with the ADA missions. FY 95 is the last year of funding for AVENGER upgrades. The FY 96 and FY conflicts and to conduct combat operations characterized by rapid response and a high probability of success while minimizing the risk of significant American casualties. A. Mission Description and Budget Item Justification: The changing global threat and the new Army Warfighting Doctrine developed to respond to this changing threat all significantly impact the mission of Air Defense Artillery (ADA). This doctrine calls for US forces to be able to win two nearly simultaneous major regional are appropriately funded in Budget Activity 7.

Project D036 - The PATRIOT system is being upgraded through a series of individual materiel changes (MC) culminating in the attainment of the PATRIOT Advanced Capability - 3 (PAC-3) system. The communication upgrades improve PATRIOT's above and below battalion communication equipment. These changes eliminate PATRIOT peculiar communications equipment and improve PATRIOT's interoperability between systems and between the services.

FY 1994 Accomplishments:

- P31 Test Program (18838)
- Communications Upgrades (17630)
 - P31 Test Program Sets (1741)
- Responsive Threat Analysis (750)

conditions). Additionally, this PIP will increase the lethality and survivability of the total system through the addition of the Command and Control/Manual, Fire Control-1, Command and Control/Automatic, and improved Remote Control Unit (RCU) subsystems. These subsystems will increase AVENGER's probability of target detection AVENGER system will provide the Army with the ability to determine complementary capabilities to the STINGER and Air-to-Air STINGER missiles. Project funding improved fire control can upload software at launch time which is optimized for the specific target of interest. The system will be more survivable because the improved and identification by cueing the gunner to the target location using air track data reported by Army and USMC C2 systems. The gunner can then launch (without delay RCU will allow the gunner to engage with full system capability from protected positions such as bunkers. Flight evaluations of Complementary missile utilizing the for visual identification), using the ID data in the C2 report and locally obtained passive sensor data. The STINGER-RMP missile will be far more lethal since the Environmental Control Unit (ECU, with cooling for hot desert climates) and Prime Power Unit (PPU, to provide power needed to operate ECU under all climatic in FY 1995 provides for an operational assessment - to include comparison of the ground-to-air Starstreak missile system and STINGER Block II missile system. Project D038 - AVENGER Product Improvement Program: The AVENGER PIP permits worldwide employment of AVENGER through the addition of an

FY 1994 Accomplishments:

- Completed FC-1 Design and Development (890)
- Integrated IWCS and Incorporated Test Findings (795)
- Conducted Test Programs and Assessed System Performance through Technical Tests (700)

7 - Operational System Development

0203801A Missile/Air Defense Product Improvement Program

Conducted Testbed Simulation Analysis/Ground Test Evaluations of the AVENGER Complementary Missile, with Flight Test 3Q95 (5792)

FV 1995 Planned Program:

- Conduct Inventory Requirements Assessment of Starstreak/STINGER Block II Missiles (110)
- Conduct Life Cycle Cost Analysis and Comparison of Adding Starstreak/STINGER Block II with Launch Platform Modifications to Army Inventory (180)
 - Conduct Operational Effectiveness of Starstreak vs. STINGER Block II (1800)
- Conduct Target Acquisition and Tracking Capabilities Analysis of Starstreak vs. STINGER Block II (3436)
- Conduct Performance Evaluations of Starstreak vs. STINGER Block II Utilizing Simulations Considering Battlefield Environments (2200)
 - SBIR/STTR (166)

develops the improved missile for adaptation to any or all of the STINGER firing platforms, extends the missile service life and establishes a government post Project D303 - STINGER Product Improvement Program: This project provides a product evolution of the STINGER-RMP to improve countermeasures capability via externally loaded software, which is downloaded from a reprogrammable module in the gripstock. This concept allows for timely upgrades program is a development of an advanced infrared (IR) Focal Plane Array Seeker which improves the performance of the missile in clutter. The program to correct system deficiencies, rapid reaction to new threats or threat countermeasures, development of specialty software programs where full capability may not be desired, and accommodation of new missions. The Block I upgrade project, which adds a roll sensor and enhanced software, solves the recognized system performance deficiencies in countermeasures and other engagement conditions and increases terminal accuracy. The Block II deployment software support posture. The abbreviated Block II EMD program provides for contractor format technical data package, design qualification of guidance section conducted as part of the production qualification, and platform integration.

FY 1994 Accomplishments:

- Completed Phase I (Reactive Countermeasures & Low Beta) (4000)
 - Performed Hardware Integration Testing (2000)
- Finalized Block I Hardware Design and Documentation (2519)
 - Completed Phase II Software Concepts (6775)
- Conducted Testing of Phase I Software Design (2500)
 - Performed Phase II Software Checkout (1500)

FY 1995 Planned Program:

- Demonstrate the Broad Area Announcement (BAA) 2.75" Infrared (IR) Focal Plane Array (FPA) Seeker Head (2900)
 - Initiate Miniaturization of the 2.75" IK FPA Electronics Package (1000)
- Initiate Target Identification and Countermeasure Algorithms for the 2.75" IR FPA Seeker (929)

A. Mission Description and Budget Item Justification

TACMS Block IA development effort will integrate Global Positioning System (GPS) technology into the guidance system of the Army TACMS Block I missile to provide BAT Carrier. The HELLFIRE PIP consists of the HELLFIRE II Missile System insensitive munitions development program. Funding was provided for development and capability to support the US Army mission of crisis response to regionally based threat and allows for TOW to continue to be integral to the strategic principle of forward Control subsystems. The ATACMS BLK II transitioned into the BAT PE #0604768A, Project D688 in FY 95 and will continue through the completion of the program. Expanding regional power threats require an evolutionary improvement program to maintain the effectiveness of the HELLFIRE, Army TACMS, TOW Systems, and these funds allow for future improvement program studies/demonstrations. Project D2MT provides for the operational testing of the Army TACMS Block IA Program. presence. Included in this PIP are missile improvements to include a lethality effort against new/evolving threats and the Improved Target Acquisition System (ITAS). enhancing system performance. These funds also supported participation by Block IA prototype missiles in the Joint Precision Strike Demonstration (IPSD). Further, more accur ate information for orientation of the missile in position and azimuth. The payload quantity of M74 anti-personnel/anti-materiel (APAM) bomblets will be The TOW FIP provic es advances in the day/night sight improvements, fire control and missile improvements. Improvements are required to maintain the infantry's reduced resulting in a range approximately twice that of the current Block I missile. The inherent GPS accuracies will be achievable independent of range, thereby The ITAS is a technology insertion program using 2nd Gen Forward Looking Infrared (FLIR) technology to upgrade the current TOW Target Acquisition and Fire qualification of the precursor and main warheads at the component level, and to continue development of the Congressionally directed training missile. The Army These projects support development of upgrades to current production vehicles and are appropriately funded in this budget activity 7.

PROJECT 9945 - HELLFIRE Product Improvement Program:

This project produces warheads that are highly resistant to external stimuli that could cause unsafe detonation. Tri-Service requirements call for weapons that exhibit reactions no more violent than burning when excited by external stimuli.

FY 1994 Accomplishments:

DATE

- Initiated Phare II Insensitive Precursor Warhead Program. (1132)
- Completed warhead qualification testing (OGA) and in-house general support. (1929)
- Funding withheld by OSD for Congressionally directed Training Missile Program. (2000)

FY 1995 Planned Program:

- Congress appropriated \$3862 for Hellfire training missile.
 - SBIR/STTR Decrement. (83)

PROJECT D304 - ARMY TACMS BLOCK IA:

The Army TACMS Block IA development effort will integrate Global Positioning System (GPS) technology into the guidance system of the Army TACMS Block I missile will be reduced resulting in a range approximately twice that of the current Block I missile. The inherent GPS accuracies will be achievable independent of range, thereby to provide more accurate information for orientation of the missile in position and azimuth. The payload quantity of M74 anti-personnel/anti-materiel (APAM) bomblets Engineering, Manufacturing, and Development (EMD) program will incorporate the improved APAM warhead capability. The improved missile will destroy high value enhancing syr em performance. Funds also supported participation by Block IA prototype missiles in the Joint Precision Strike Demonstration (JPSD). The Block IA targets and be especially suited for destroying enemy surface-to-surface missile system launchers. Further, these funds will allow for future improvement program studies/demonstrations pertaining to technology advancements, payload variants, propulsion, guidance and control, and fire control improvements.

FY 1994 Accomplishments:

- Initiated GPS Integration/Interface Preliminary Design Support and Technology Demonstration Support for JPSD. (8900)
 - Initiated EMD for Block IA (first increment). (16259)
- Studies, L'evelopment, and validation of future improvement program. (201)

FY 1995 Planned Program:

- GPS Integration/interface Preliminary Support. (1930)
- Begin Block IA lab, static, warhead vibration, and road tests. (4384)
 - Block IA EMD (second increment). (29853)
- Studies, development, and validation of future improvement programs. (337)
 - SBIR/STIR Decrement. (778)

FY 1996 Planned Program:

- Block IA EMD (third increment). (15285)
- Initiate and complete Production Prove-Out Test (PPT), Pre-production Qualifications Test (PPQT) and Operational Test (OT), continue vibration

and road tests. (7913)

Studies, development, and validation of future improvement programs. (256)

FY 1997 Planned Program:

- Block IA EMD (fourth increment). (3014)
- Complete testing activities, data analysis and reporting. (150)
- Studies, development, and validation of future improvement programs. (1419)

PROJECT D2MT OPTEC ATACMS BLOCK 1A Operational Tests

Evaluation (IOTE) in FY 96 in support of Milestone III full production decisions. Operational Testing is conducted under conditions similar to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides the Army leadership with independent test and evaluation of system effectiveness and Operational Test and Evaluation Command (OPTEC). The Army TACMS is an Acquisition Category (ACAT) I system with a dedicated Initial Operational Test and This project finances the direct costs of planning and conducting operational testing and evaluation of the Army Tactical Missile System Block IA system by the

FY 1996 Planned Program:

Conduct Army TACMS Block IA operational testing. (3582)

FY 1997 Planned Program:

Complete Army TACIMS Block IA operational testing. (398)

PROJECT D336: TOW Product Improvement Program

fee/award fee (CPIF/AF) contract. The Government anticipates that the Low Rate Initial Production (LRIP) contract will be awarded sole source to the EMD contractor on missile improvements (seeker, lethality, aerodynamics, guidance, control, reduced missile time of flight), and Improved Target Acquisition System (ITAS). The ITAS is a Provides for continued development of improvements to the TOW missile system. Improvements are required to maintain the Infantry's capability to support the US Army forces using the TOW system, allowing the Army to own the night and providing compatibility with the TOW next generation missile. The ITAS design provides simple growth potential for digitization applications. The ITAS EMD contract effort was competitively awarded to prime contractor Texas Instruments on a cost plus incentive technology insertion program utilizing 2nd Gen FLIR technology to upgrade the current TOW Target Acquisition and Fire Control subsystems. The ITAS will provide mission of crisis response to regionally based threats and allow TOW to continue to be integral to the strategic principle of forward presence. Included in this PIP are improved target detection and acquisition range, improved probability of hit and enhanced fire control capabilities that will upgrade the anti-armor capability of light a fixed price incentive fee (FPIF) basis. The Full Rate Production (FRP) contract will be awarded on a firm fixed price (FFP) basis and may be awarded through competition or sole source solicitation depending on the total quantities to be procured at that time.

| a. SBIR/STTR decrement (-1052) | | | | |

In order to properly fund and support the integrated ATACMS/BAT program, the FY 96 RDT&E funding for project D685 (BAT Carrier) was transferred from PE 23802 (Other Missile PIP), and placed in PE 64768 (BAT) in project D688 (ATACMS BLK II). The FY 95 funds were transferred by congressional action. The Army has transferred the FY 96 and later years funding streams through the POM process.

A. Mission Description and Budget Item Justification

spectrum management software has been designated as part of the migration system for DOD use. The work efforts in FY 1994 - FY 1997 support the development of the first three software releases, the fabrication of development prototype, support for an IOT&E, and initiation of work efforts for follow-on software releases. This program DESCRIPTION: A requirement exists to automate Signal unit's capability to manage multiple tactical communications systems in support of battlefield operations. The Integrated System Control (ISYSCON) facility will provide automated, integrated management of the tactical communications network, establish an interface with each technical control facility in the Army Tactical Command and Control System (ATCCS) architecture, and enable automation assisted configuration and management of a element also supports any development required for PM, Joint Tactical Area Communications System (JTACS) Area Common User Systems (ACUS). This program is manufacturing development but which have received approval for production through DAB or other action, or production funds have been included in the DOD budget dynamic battlefield. ISYSCON is being developed in an evolutionary manner with incremental software releases. A change to the requirements document has added planning and management of satellite resources as a requirement. The ISYSCON has been selected as the network management system for joint task force use. The assigned to Budget Activity 7 since it includes those development projects, in support of development acquisition programs or upgrades, still in engineering and submission for the budget or subsequent fiscal year.

FY94 Accomplishments:

- Completed System Design Review (2740)
- Prepared and delivered Network Management Improvement Plan (800)
- Completed 2nd increment of Spectrum Management Software (2600)
- Developed and delivered draft Software Requirements Specifications (SRS) and Conducted Software Specification Review (SSR) for Phase 0 (P0) Baseline (7566)
 - Revised draft SRS for P0 (2485)

FY 95 Planned Program:

- Complete SRS and conduct Preliminary Design Review (PDR) for P0 Baseline (2850)
 - Deliver draft SRS and conduct SSR for Phase 2 (P2) Baseline (2500)
- Complete PDR for hardware prototype (200)

- Complete Detail Design and conduct Critical Design Review (CDR) for PO Baseline (3566)
- Complete SRS and conduct PDR for P2 Baseline (2500)
 - Code, unit test, release P0 Baseline (3050)
- Complete 3rd increment of Spectrum Management Software (2600)
- Initiate Systems Design and conduct System Requirements Review (SRR) for Phase 3 (P3) (561)
 - Detail design of P2 (976)
- Small Business Innovative Research (SBIR)/Small Business Technology Transfer Program (STTR) (403)

FY 96 Planned Program:

- System test (P0) (500)
- Complete Detail Design and conduct CDR for P2 Baseline (2000)
- Complete Systems Design and conduct System Design Review (SDR) P3 Baseline (334)
 - Develop and deliver draft SRS and conduct SSR for P3 Baseline (1200)
 - Complete 4th increment of Spectrum Management Software (1000)
 - Complete SRS and conduct PDR for P3 Baseline (2500)
- Complete system test (P2) (550)
- Code, unit test, formal test P2 Baseline (4000)
 - Deliver draft training materiel (584)
 - CDR for hardware prototypes (200)
- Develop and deliver tech pubs (500)

FY 97 Planned Program:

- Initiate Systems Design for Phase 4 (P4) Baseline (600)
- IOT&E spt for P2 Baseline (& follow up actions) (1808)
- Complete Detail Design and Conduct CDR for P3 Baseline (3000)
- Complete Systems Design and conduct SDR for P4 Baseline (1000)
- Develop and deliver draft SRS and conduct SSR for P4 Baseline (1500)
- Code, unit test, system test for P3 Baseline (4000)
- Complete SRS and conduct PDR for P4 Baseline (3324)

joint service/NSA working groups exint in the area of key management to avoid duplication and to assure interoperability between all services' systems to include standards threat Signal Intelligence capabilities and to insure our data network integrity. The Army's RDTE ISS program objective is to implement National Security Agency (NSA) engineering, integration of available information accurity (INFOSEC) products, development (when required), and testing are services provided to ensure that C41 systems are protected against malicious or acciduntal attacks by our enemies or friends. AKMS is the result of restructure of the COMSEC project and is not a new start. Several and testing. For the emerging multilevel network security, the Defense Information Systems Agency (DISA) Multi-Level Security (MLS) working group coordinates the developed security technology in Army information systems. The thrust of Project D491, COMSEC, is to insure total signals and data security of all Army information This program develops Information Systems Security (ISS) equipment and techniques required to combat services different technology efforts. The National Security Agency (NSA) reviews each services RDT&E programs to avoid duplication between and with their own. distribution while supporting joint interoperability. It provides communications and network planning with key management on a single platform. System security systems, to include any operational enhancement and specialized Army configurations. The thrust of Project D501, AKMS, is to automate key generation and These projects support development of upgrades to current production vehicles and are appropriatel, funded in Budget Activity 7. A. Mission Description and Budget Item Justification:

information and to integrate these mechanisms into specified systems so secure operations are as transparent as possible to the users. This entails performing architecture information systems. Project objectives a to provide systems security mechanisms through encryption, trusted software or standard operating procedures to protect the studies and modeling, development models, system integration and testing, installation kits and certifications and accreditations of Automation Information Systems. Project D491 - Communications Security Equipment Technology: Project implements National Security Agency (NSA) developed security technology in Army

FY 1994 Accomplishments:

- Completed Engineering Development Manufacturing (EDM) of Army Key Management System (AKMS), completing critical design review and software coding of workstation (3782)
- Contract review and prototype development of Tactical End-to-end Encryption Device (TEED), element of Army's Multilevel Security Initiative (ASTI) (1946)
 - Evaluated of INFOSEC commercial off the shelf (COTS) (677)
- Redesigned STU-III interfaces to other tactical COMSEC (400)
- Funded Army portion of User Authentication by Biometrics Consortium (145)

|------------------------------------|---|---------------|
| BUDGET ACTIVITY | PE NUMBER AND TITLE | |
| 7 - Operational System Development | 0303140A Information Systems Security | |

FY 1995 Planned Program:

- Complete concept development of the Tactical End-to-end Encryption Device (TEED) to include NSA certification (2600)
 - Initiate prototype development of Trusted Network Base (965)
- Procure, evaluate, and integrate platforms performing Guard functions between different classified levels User (619)
 - Initiate contract to design programmable COMSEC/TRANSEC functions (600)
 - Design, fabricate and test installation kits for the AIRTERM COMSEC (300)
- Small Business Innovative Research (SBIR)/Small Business Technology Transfer (STTR) Program (109)

FY 1996 Planned Program:

- Continue development of Trusted Network Base software complete Critical Design Review and initiate software coding. (863)
 - Continue development of re-programmable COMSEC/TRANSEC using Cypris Module or chips. (600)
- Perform in-house evaluation of INFOSE'. equipments such as Advanced Key Management Module (AKMM), RADIANT MERCURY Trusted Guard, STICKPIN COMSEC chip, and Cypris re-programmable Module (600)
 - Demonstrate and insert into the Battle Labs Biometric user authentication systems into Army computer platforms (300)

FY 1997 Planned Program:

- Complete concept development of Trusted Network Base software; initiate network testing and integration into Integrated Systems Control (ISYSCON)
 - program. (1100)
- Complete fabrication and testing of embedable COMSEC cards. (914)
- Perform in-house evaluations and integration of INFOSEC equipments COMSEC. (630)

Project D501 - Army Key Management System (AKMS): This program provides decentralized and automated key generation, distribution and management while enhancing joint interoperability. It eliminates paper encryption key and provides communications network planning with key management on a single platform.

FY 1994 Planned Program: Efforts funded under Project D491

FY 1995 Planned Program:

- Continue the software development of the AKMS workstation (2126)
- Provide contractor and programmatic support to the Automated Net Control Device (ANCD) Key Distribution Device (KDD), Army's engineering support to Tier I theater level and Commander In Chief regional controller effort (215)
 - Small Business Innovative Research (SBIR)/Small Business Technology Transfer (STTR) Program (50)

7 - Operational System Development

BUDGET ACTIVITY

PE NUMBER AND TITLE 0303142A Satcom Ground Environment

Project D2PT - Smart-T Operational Test: Project D2PT finances the direct costs of planning and conducting operational testing and evaluation of the Secure, Mobile suitability of the system. Project D2PT is restructured from within PE 0303142A, Satellite Communications Ground Environment, and is not a new start. Starting in FY 96 and beyond, funding for operational testing of ACAT I systems is specifically programmed within the PE specific to each system. Previously, funding for operational system with an Initial Operational Test and Evaluation (IOTE) in FY 98. Operational testing is conducted under conditions as close as possible to those encountered in actual combat with typical user troops trained to employ the system. OPTEC provides Army leadership with an independent test and evaluation of effectiveness and Anti-Jam Reliable Tactical Terminal (SMART-T) by the Operational Test and Evaluation Command (OPTEC). SMART-T is an Acquisition Category (ACAT) IC testing was programmed in PE 0605712A, Support of Operational Testing.

FY 1994 Accomplishments: Program unfunded in FY 1994

FY 1995 Planned Program: No Planned Program

FY 1996 Planned Program: No Planned Program

FY 1997 Planned Program

Planning and preparation for SMART-T IOT&E (199)

Acquisition strategy for program D2RT: Not applicable.

and evaluation effectiveness and suitability of the system. Project D2RT is restructured from within PE 0303142A, Satellite Communications Ground Environment, and is Project D2RT - Scamp Oerational Test: Project D2RT currently finances the direct costs of planning and conducting testing and evaluation of the Single Channel Anti-Jam Manportable (SCAMP) terminal by the Operational Test and Evaluation Command (OPTEC). SCAMP is an Acquisition Category (ACAT) IC system requiring preaward equipment demonstrations to evaluate operational suitability of contractor hardware prior to award. OPTEC provides Army leadership with an independent test therefore, not a new start. In FY 96 and beyond, funding for operational testing of ACAT 1 systems is specifically programmed within the PE specific to each system. Previously, funding for operational testing was programmed in PE 0605712A, Support of Operational Testing.

FY 1994 Accomplishments: None

FY 1995 Planned Program: No planned program

FY 1996 Planned Program

Evaluate Pre-Award Equipment Demonstrations (274)

Command, Control, Communications and Intelligence (C31) for the worldwide Super High Frequency (SHF) Defense Satellite Communications System (DSCS) program. Project D253 - DSCS-DCS Phase II: This project provides funds required to develop strategic and tactical Ground Subsystem equipment to support JCS validated Continuing upgrades for the DSCS are vital to support the emerging power projection and rapid deployment role of the Armed Forces. DSCS provides warfighters multiple channels of tactical connectivity as well as interface with strategic networks and national decision makers.

FY 1994 Accomplishments

- Continued Engineering and Manufacturing Development (EMD) on the Universal Modem (UM) (14437)
- Continued development for DSCS Training Devices (4900)
- Initiated Development of a Testbed for the Replacement Satellite Configuration Control Element (RSCCE) (4252)
- Initiated development of DSCS Integrated Management System (DIMS) Interface Software (1593)
- Continued support and upgrades to the Integrated Research Facility (IRF) and System Engineering Technical Assistance (SETA) efforts (4222)
 - Continued development of Signal Characterization and Recognition System (SCARS) and support development of the AN/FSQ-124A (2200)

FY 1995 Planned Program

- Complete basic UM development and initiate Very High Data Rate (VHDR) engineering change (9611)
- Complete development for DSCS Training Devices (6300)
- Complete engineering development for the AN/USC-28 embedded computer and continuation of miscellaneous upgrades (3430)
 - Continue development of DIMS Interface Software (2348)
- Initiate the NDI Adaptation Phase for the RSCCE (6010)
 - Continue IRF and SETA (3538)
- Small Business Innovation Research/Small Business Technology Transfer Program (624)

FY 1996 Planned Program

- Continue VHDR UM Program (8100)
- Continue DIMS Interface Software (2500)
- Continue NDI Adaptation Phase of RSCCE (4800)
 - Continue IRF and SETA (3655)

Page 3 of 29 Pages

February 1995 DATE RDT&E BUDGET ITEM JUSTIFICATION SHEET (R-2 Exhibit) PE NUMBER AND TITLE 7 - Operational System Development **BUDGET ACTIVITY**

0303142A Satcom Ground Environment

FY 1997 Planned Program

- Complete VHDR UM Program (4800)
- Initiate development of the Integrated Baseband Workstation (2000)
 - Complete DIMS Interface Software (2900)
- Complete the NDI Adaptation Phase for the RSCCE (2000)
- Continue IRF and SETA (3813)
- Initiate development of the Replacement BATSON (2000)
 - Initiate the AN/GSC-52 Modification (3800)

followed by a sole source acquisition of hardware. The DIMS program (software) does not have a follow-on production program. The DSCS Training Device Program Procurement Programs that contain a basic production and acquisition year followed by several option years of production. The AN/USC-28 engineering effort will be Acquisition Strategy for Project D253: Both the UM Development and RSCCE NDI Adaptation Programs will be followed by Competitive Firm Fixed Price will have a limited production program.

configuration. RDT&E dollars were utilized to design and develop the tactical mobile variant of the GNDCP. The Army's first terminal has been delivered and fielding is Project D383 - Ground Command Post: The Ground Command Post (GNDCP) terminals are Air Force developed and procured. They will provide survivable, anti-jam, currently in progress. The Army is responsible for Total Package Fielding, identifying and procuring initial spares, procuring Government Furnished Equipment (GFE) and integrating/fielding eight (8) terminals into the Army Force Structure. Frequency/Ultra High Frequency (EHF/UHF) (criminals will replace the AN/GSC-40 equipment. The terminals will be fielded in both a fixed and transportable enduring worldwide communications. GNDCP is a Network Control Terminal which manages Milstar communications resources. These Extremely High

FY 1994 Accomplishments

- Established logistics support for Fort McPherson terminal and future terminals (189)
- Terminal mobilized at Tobyhanna Army Depot prior to delivery to FORSCOM at Fort McPherson (50)
 - Supported fielding of Fort McPherson terminal (200)
- Supported Air Force during site survey and design at National Milstar Command Center (NMCC) at Fort Ritchie (70)
 - Continued support efforts for fielding of GNDCP terminals (215)

FY 1995 Planned Program: No RDT&E funded effort

FY 1996 Planned Program: No RDT&E funded effort

FY 1997 Planned Program: No RDT&E funded effort

|--|

Force Structure. The GNDCP terminals are Air Force developed and procured. The Army provided procurement funding to the Air Force who, as the Primary Inventory Control Activity, purchases Army identified initial EHF/UHF spares. The Army is also procuring Government Furnished Equipment and support equipment, scheduling Acquisition Strategy for Project D383: The Army provides Level 1 management for the integration and fielding of eight (8) GNDCP terminals coming into the Army operator/maintainer training and verifying Technical Manuals.

have Low Probability of Interception and Low Probability of Detection (LPILPD) to avoid being targeted for destruction, jamming or intercept. The prime mover will be a payloads. It will provide the security, mobility, and anti-jam capability required to defeat the threat and satisfy the critical need as stated above. The SMART-T will also advancing forces move beyond the line-of-sight capability of MSE. This equipment will communicate at both low and medium data rates (LDR/MDR) over the Milstar Project D384 - SMART-T: The Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) will provide a range extension capability for the Army's Mobile Subscriber Equipment (MSE) to support the Force Projection Army. Specifically, it will provide a satellite interface to permit uninterrupted communications as our satellite constellation. It will also be compatible with the UHF Follow-On (UFO); the Navy Fleetsatcom EHF satellite package; and MIL-STD-1582B/C compatible High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) configured with all the electronics and the self-erectable antenna.

FY 1994 Accomplishments

- Began integration, Contract Technical Test and conducted Modem Verification Test (5289)
 - Continued Hardware Engineering and conducted formal design reviews (14988)
 - Continued Software Engineering and conducted formal design reviews (7314)
 - Continued Major Contract Development Effort of 12 SMART-T's (28523)

FY 1995 Planned Program

- Continue Contractor Technical Test (22281)
- Conduct Payload to Terminal Interface Test (MST-3000)(1789)
- Conduct Terminal Test with Lincoln Lab Medium Data Rate (MDR) Simulator (2685)

FY 1996 Planned Program

- Complete Contractor 1 echnical Test and obtain Low Rate Initial Production (LRIP) Decision (9479)
- Begin development effort for Joint Interoperability Standard, Network Control, and Payload Specification Changes (11919)
 - Begin development of training simulator (interactive courseware) (451)

FY 1997 Planned Program

- Continue implementation of Joint Interoperability Standard, Network Control, and Paylead Specification Changes (9821)
 - Continue development of training simulator (1075)

Exhibit R-2

Initial Production (LRIP) and Full Scale Production (FSP) will be competitively awarded under a single contract (2QFY96) based upon the development contract effort and LRIP/FSP proposals. A SMART-T Milestone III Decision will be required to enter into the FSP Phase. The FSP options will only be exercised after receipt of a favorable by Follow-On Test and Evaluation (FOT&E). Success in achieving the MTBF value will be maximized through competition between the two contractors. Both Low Rate The streamlining features of this phase of the strategy include developing a reliability growth plan to achieve the required Mean Time Between Failure (MTBF) reliability Milestone III Decision. The total Army terminal requirement is 209, of which 52 will be procured during LRIP (base year plus one option) to ensure sufficient quantities contract following Milestone III approval. The award of the first FSP quantities is anticipated in 1QF 199. Additional quantities (i.e., 136) will be procured for the Air International (Richardson, TX). Twelve Engineering Development Model (EDM) terminals (6 from each contractor) are now being procured under the two contracts. will be available for the launch of the first MDR satellite in FY 99. The FSP quantities (157 Army terminals) will be awarded as fixed price options to the LRIP/FSP Acquisition Strategy for Project D384: The SMART-T program employs a competitive development strategy. The development phase includes two contractors performing under Cost-Plus-Incentive-Fee (CPIF) contracts. The contracts were awarded on 9 Nov 92 to Raytheon Company (Marlborough, MA) and Rockwell Force, Marine Corps, JCSE, Navy, and other DoD Special Users.

Production Strategy. No major milestone schedule changes in the Production phase occurred as a result of the restructure and the Army quantity remains at 150 terminals. Communications Support Element (JCSE) units which cannot be served by larger less mobile terminals. The SCAMP will be a handcarried, battery powered EHF satellite the Milstar network, and provide the multi-zervice owner operator with voice and data capability. The development contract was awarded 17 Sep 92 for SCAMP Block I.. The SCAMP program was part of the Milstar DAB Review held Oct 92. On 26 Oct 94, the Army Acquisition Executive (AAE) restructured the SCAMP Block I program Project D386 - SCAMP: The Single Channel Anti-Jam Manportable (SCAMP) terminal will provide a manportable, secure, anti-jam, Low Probability of Interception/ communicate at data rates from 75 to 2400 bits per second (BPS). The SCAMP will be compatible with the Milstar waveform, interoperable with other terminals using The SCAMP Development contract was Terminated for Convenience. On 15 Nov 94, the Army Acquisition Executive (AAE) approved the Milestone III Competitive An Engineering Feasibility Effort (EFE) to develop the Block II terminal in the range of 12-15 pounds was approved as part of the May 92 Milestone Decision and communications terminal utilized with the Milstar Low Data Rate (LDR), Milstar I and Milstar Payload II satellites and other EHF waveform satellites. It will Low Probability of Detection (LPI/LPD) Extremely High Free and Joint (EHF) satellite communications capability to Army, Air Force and Joint reapproved at the 15 Nov 94 Decision Review to begin in FY 96.

FY 1994 Accomplishments

- Continued development of 15 Engineering and Manufacturing Development (EDM) Models (16955)
 - Continued Software Engineering and conducted formal design reviews (5297)
- Conducted Critical Design Review (CDR) and continued Hardware Engineering efforts (9477)
- Continued pursuit of Communications Security (COMSEC) certification and began Contractor test efforts (1300)

FY 1995 Planned Program (includes Below Threshold Reprogramming of 3071 within PE 0303142A from D456)

- Conduct Milestone III Decision Review (507)
- Continue acquisition requirements activities (1584)

BUDGET ACTIVITY

0303142A Satcom Ground Environment

PE NUMBER AND TITLE

- Begin Pre-award Evaluation/Demonstration (1077)
- Small Business Innovation Research (2)

1996 Planned Program 7

- Complete Pre-award Evaluation/Demonstrations/Reviews (2078)
- Begin implementation of System Control and Joint Interoperability Requirements (1871)
 - Begin Block II Engineering Feasibility Efforts (5934)

FY 1997 Planned Program

- Continue implementation of System Control and Joint Interoperability Requirements (1044)
 - Continue Block II Engineering Feasibility Efforts (1827)

using today's technologies to meet communications deficiencies resulting from Desert Storm. The Block I development phase initially included two competing contractors Acquisition Strategy for Project D386: The SCAMP terminal will be developed in a block approach. Block I will be a manportable terminal not to exceed 37.5 pounds government affordability to retain two, an early determination was made to Terminate For Convenience the Lockheed Corporation contract on 16 Sep 93. On 26 Oct 94, performing under Cost-Plus-Incentive-Fee (CPIF) which were competitively awarded in Sep 92. Based on unexpected cost growth of both contractors and the lack of the AAE restructured the SCAMP Block I program and the Martin Marietta Corporation contract was Terminated for Convenience. A Milestone III Decision for a competitive full scale production buy (quantity of 312 multiservice terminals) was approved on 15 Nov 94.

Circuits (MIMIC), custom Very Large Scale Integrated Circuits (VLSIC) and increased efficiency power devices. Further weight savings and power efficiency increases The May 92 ASARC approved SCAMP Block II (maximum 15 lbs.) Enginecting Feasibility Efforts (EFE) placing emphasis on downsizing the following subsystems: Radio Frequency (RF) Generator, Digital Processor, Transmitter, and Antenna. These subsystems will utilize technologies such as Millimeter Microwave Integrated will investigate battery technology, lightweight composite materials, and development of a paging capability.

Channel Anti-Jam Manportable (SCAMP) terminal development process. The terminals are capable of providing mobile, survivable, anti-jam, low probability-of-intercept payload tests and Milstar interoperability demonstrations. They will also reduce risk in the Secure Mobile Anti-Jam Reliable Tactical Terminal (SMART-T) and Single Project D45.* - MILSTAR EDM Terminal: These EHF Milstar Engineering Development Model (EDM) terminals will be utilized as test assets to support satellite communications from an S-250 shelter mounted on a Common Utility Cargo Vehicle (CUCV) truck towing a trailer with generator.

FY 1994 Accomplishments

- Continued contractor efforts to support MET testing with SCAMP and SMART-T to reduce risk (2307)
- Conducted Lincoln Lab/Raytheon Interoperability Testing and Medium Power Transmitter efforts (233)

Exhibit R-2

world situation, no production buy will be required. The MET will be used for SCAMP and SMART-T contractor risk reduction tests, multi-service interoperability tests, terminals. Magnavox Electronic Systems Company received the award. A sole source production contract was to be executed in Nov 92; however, due to the changed Acquisition Strategy for Project D455: A single Full Scale Engineering Development (FSED) contract was awarded in Mar 85 to develop and produce 15 FSED and satellite payload tests.

provide rapid, reliable, effective communications to support tactical Command, Control, Communications and Intelligence (C3I) requirements for tactical commanders and provides funds for the development of tactical satellite communications terminals and control systems for the Department of Defense. Developments under this program Project D456 - Tactical Satellite Communications (TACSATCOM): The Ground Mobile Forces Satellite Communications (GMFSC) for TACSATCOM system Commanders-in-Chief (CINC).

FY 1994 Accomplishments

- Started First Article Test Evaluation for Ultra High Frequency (UHF) program (3120)
- Completed Anti-Jam Control Modem (AJCM) T1 data rate study (885)
- Started Pre-Planned Product Improvement (P3I) on PSC-5 Enhanced Manpack UHF Terminal (EMUT) for Over-The-Air Rekeying
 - (OTAR) & Auto Demand Assigned Multiple Access (DAMA) (1350) Started P3I on PSC-5 EMUT for paging and voice recognition (1403)
- Initiated Pre-Contractual efforts for Super High Frequency (SHF) Tri-Band Terminals (1002)

FY 1995 Planned Program

- Continue P3I on PSC-5 EMUT for OTAR and Auto DAMA and new 5khz waveform (2312)
- Continue P3I on PSC-5 EMUT for paging and voice recognition (2275)

The IFCS corrects present and future supportability problems resulting from electronic component obsolescence in the existing design. This effort will result in reduced the Multiple Launch Rocket System (MLRS). The Product Improvement Program (PIP) provides for the Engineering and Manufacturing Development of an Extended weapon systems. The MLRS ILMS will decrease the stow to aim point timeline and enhance effectiveness in countering surface to surface missile fire. These projects operation and support cost due to addition of built-in test equipment and will provide growth capabilities for existing and future MLRS Family of Munitions (MFOM) A. Mission Description and Budget Item Justification; Expanding Regional Power Threats require an evolutionary improvement program to maintain the effects of Range Rocket (ER-MLRS), Improved Fire Control System (IFCS) improvements in range, accuracy and effectiveness, and maneuver force safety (self-destruct fuze). support development of upgrades to current production vehicles and are appropriately funded in Budget Activity 7.

Project D027 - Improved Launcher Mechanical System: This project provides the Engineering and Manufacturing Development (EMD) of the Improved Launcher Mechanical System (ILMS). The ILMS will decrease the stow to aim point timeline, enhance effectiveness in engaging and supporting the force, and increase MLRS platform survivability.

FY 1994 Accomplishments: N/A

FY 1995 Planned Program:

- Develop and Initiate Product Team Design (1000)
 - Develop and Initiate Trade Studies (1500)
 - Minor Tasks Including In-In-House (397)
 - SBIR/STTR Decrement (62)

FY 1996 Planned Program:

- Hardware & Software Design (14121)
- GFE Retrofit Kits (500)

7 - Operational System Development

0603778A MLRS Product Improvement Program

White Sands Missile Range (WSMR) Test & Software (480) Minor Tasks Including In-House (3885)

Project D054 - Extended Range -MLRS: This project provides for the Engineering and Manufacturing Development (EMD) of an Extended Range (ER-MLRS) rocket for the (MLRS). The rocket will enhance the capability of the existing MLRS by providing improvements in range, accuracy, effectiveness, and maneuver force safe.; (improved submunitions with self destruct fuze).

FY 1994 Accomplishments:

- (EMD) Ballistic, V6 and Class Loader Software Design (7496)
 - SDF Development (700)
- Wind Measurement Devise (WMD) Development (5691)
- Early 12 Flight Tests & Initiate Ballistic Algorithm Tests (1200)
 - Minor Tasks Including In-House (1970)

FY 1995 Planned Programs:

- (EMD) Class Loader SW Code/Test & V6 Software Integrate/Testing (8128)
 - WMD-Met Sensor SW Code/Test EDT Units (7125)
 - XM451 Fuze Qualifications (480)
 - SDF Development (1085)
 - Ballistic Flight Tests (1967)
- Minor Tasks Including In-House and Preparation for ASARC (838)
 - SBIR/STTR Decrement (421)

FY 1996 Planned Program:

- WMD Testing and Preproduction Qualification Testing (3910)
 - Complete Ballistic Algorithm Flight Testing (2719)
 - IFCS SPAP FQT (3760)
- (EMD) Software Design Integration (5676)
- Minor Tasks Including In-House and ASARC Preparation (2279)

FY 1997 Planned Program:

- WMD Testing (6349)
- (EMD) Software Integration/Testing (6900)
